NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name Southern Albemarle Rural Historic District

other names/site number 002-5045

2. Location

street & number Bordered roughly by the Rivanna (north); Rt. 20 and Green Mountain (west); the James (south);

Blenheim, Jefferson Mill, Rolling, and Milton Rds, and Monroe Pkwy (east). not for publication N/A

city or town Multiple

vicinity _____

state Virginia

code VA

county _____

Albemarle

code 003

Narrative Description (Describe the historic and current condition of the property on one or more continuation sheets.)

8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.

G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

AGRICULTURE, ARCHITECTURE, ARCHAEOLOGY: HISTORIC, COMMERCE, COMMUNITY PLANNING AND DEVELOPMENT, CONSERVATION, EDUCATION, ENGINEERING, ENTERTAINMENT/RECREATION, ETHNIC HERITAGE: BLACK, EXPLORATION/SETTLEMENT, INDUSTRY, POLITICS/GOVERNMENT, SOCIAL HISTORY, TRANSPORTATION

Period of Significance 1729 to ca. 1955

Significant Dates 1729, 1742, 1743, 1744, 1768, 1789, 1793, 1801, 1826, 1848, 1955

Significant Person (Complete if Criterion B is marked above)

Edward Carter; John Carter; Robert Carter; Edward Coles; Joshua Fry; Peter Jefferson; Thomas Jefferson; Thomas Staples Martin; James Monroe; Charlotte Digges "Lottie" Moon; Wilson Cary Nicholas; Thomas Mann Randolph; Franklin Delano Roosevelt; Theodore Roosevelt; Andrew Stevenson

Cultural Affiliation Euro-American, African-American

Architect/Builder

David Wylie Anderson; Benjamin Charles Baker; William Adams Delano; James Dinsmore; John and William Dunkum; Annette Hoyt Flanders; Milton LaTour Grigg; Henderson Heyward; Fredrick Hill; Thomas Jefferson; Floyd Elmer Johnson; William B. Phillips; Howard Sill; James Walker; Marshall Swain Wells

Narrative Statement of Significance (Explain the significance of the property on one or more continuation sheets.)

Albemarle County, VA**

Section 7 Page 0

7. GENERAL DESCRIPTION

The Southern Albemarle Rural Historic District is located in Southeastern Albemarle County, encompassing approximately 83,627 acres in Virginia's northern Piedmont region. The rural district boundaries follow the topographical spine of the Monticello, Carter's, Mount Alto, and Green mountains, which form an extension of the larger Southwest Mountains chain. The district is physically characterized by its piedmont setting, including mountainous woodlands, rolling pastures, and low-lying floodplains. Interspersed throughout this landscape are large farms, historic villages, and crossroads communities. Vast panoramic vistas, enabled by the region's extensive concentration of open space, readily testify to the district's well-preserved rural landscape. In addition, the district nearly links the Madison-Barbour Rural Historic District, the Southwest Mountains Rural Historic District, and the Scottsville Historic District, providing an almost uninterrupted 147,000-acre corridor of historic resources comprising a significant cultural landscape. This unprecedented collection of rural and community historic districts reveals the rich heritage of Albemarle County and the surrounding Virginia Piedmont. The small gap between the Southwest Mountains district and the Southern Albemarle District is due to the intrusion of Interstate 64 between the boundaries. Despite a close proximity to the City of Charlottesville, modern intrusions are limited and unobtrusive, often located along the roads on small plots broken off of larger tracts.

The boundaries for the district encompass many of the historic roads, rivers, and creeks that formed the region's early transportation routes. The surviving historic roads generally follow their original paths, allowing much of the region's early settlement and growth patterns to be preserved. Monticello Mountain, Carter's Mountain, Green Mountain and Mount Alto, all of which are part of the larger foothill system that includes the National Register-designated Southwest Mountains Rural Historic District, forms the topographical backbone of the district, with the James and Rivanna rivers delineating the north and south boundaries. In the north, the district includes the historic sites of the early Rivanna River port villages of Shadwell (on Route 250, historically Three Notched Road), North Milton, and Milton.¹ The southern boundary of the district is defined by the James and Rockfish rivers and includes the villages of Howardsville, Warren, and Hatton. The boundary abuts the Scottsville Historic District at its southeast corner and encompasses portions of Scottsville located outside the Scottsville Historic District boundaries. The western boundary approximately follows Route 20/Scottsville Road down the western side of Carter's Mountain and Route 717 along Green Mountain, including the village of Alberene. The western boundary then extends south to the Rockfish River, which it follows to the James. The eastern border extends north from Scottsville to Route 618 (Jefferson Mill Road) and the village of Woodridge, then it follows Route 620 (Rolling Road) and Route 795 (the James Monroe Parkway) to Simeon. Milton is linked via Route 732 (Milton Road), which also accesses Rose Hill, an historically African-American community. Several historic properties along the north side of the Rivanna River have been included due to their association with the district. These include North Milton, the original Shadwell site, and Lego Farm; the latter two are currently owned by Monticello and were historically owned by Thomas Jefferson.

The interior of the district includes a nearly intact network of early roads, including River Road, Irish Road (Route 6, which was part of River Road), Martin King's Road, Route 20 (Road to Secretary's Mill), Secretary's

Section 7 Page 1

Sand Road (Route 717), and Rolling Road (Route 620). A number of historic crossroads, canals, and industrial villages lay within the boundaries, including Simeon, Esmont, Porters, Damon, Dominion, Keene, and Alberene. Large, non-contributing pockets of development along the edges were excluded from the district, particularly on the eastern side and along the James River just west of Scottsville.

The district exhibits a wealth of properties which have been previously listed on the National Register of Historic Places. Of the total twenty-three listed properties there are twenty-two dwellings and a church. Monticello, coupled with the University of Virginia in Charlottesville, is one of only six man made sites in the United States to be listed as a UNESCO World Heritage Site. The nominated buildings in the district include several structures notable for their association with nationally important figures, such as presidents Thomas Jefferson, James Monroe and Theodore Roosevelt. President Franklin Delano Roosevelt often visited the district as well. In addition, many of the dwellings are also associated with figures important to the history of the Commonwealth of Virginia, such as Peter Jefferson, who was Thomas Jefferson's father and one of the founders of Albemarle County, John Carter, who served as the Secretary of the Virginia Colony from 1721 until 1742, and Andrew Stevenson, a United States Representative from Virginia, Speaker of the House of Representatives from 1827 until 1834, and Minster to England from 1836 until 1841. In addition to their association with significant historical figures, many of the structures are also listed on the National Register for their contribution to the area's architecture and as outstanding examples of a particular style or type. Many other historic resources within the district also feature an exceptionally high, National Register level of integrity and significance, both at the individual and district level.

Landscape Overview

Much of the district is forested with large, and often connected, swaths of open fields found interspersed within the boundaries. While the tree canopy is primarily associated with the areas of steeper slopes, there are areas, such as the plantations of loblolly pines found in the eastern and southern portions of the district, where forests are found on a relatively level topography. The forest areas outside of the pine plantations are predominantly a mixture of hardwoods including Red and White Oaks, Yellow Poplar, Walnuts, Black Gums, and Pignut Hickories, with the Oaks and Poplars dominating many of the strands. The underbrush is mainly composed of Dogwoods, Redbuds, Spicebush, Mountain Laurel and Sassafras.

The district's cleared areas are associated with three different conditions, each of which is related to the agricultural potential of the land. The first area includes two strips of cleared land found paralleling each other along the east and west sides of the Green Mountains. These strips, which include the farms along Route 627 to the east and Routes 20 and 717 to the west, appear to be associated with the same deposits of the fertile Davidson Starr soil composition that was influential to the development of the neighboring Southwest Mountains Rural Historic District. Second, a large collection of cleared parcels can be seen following the course of the Hardware River east of Carter's Bridge and extending almost to Jefferson Mill. In this instance, the fertile and wide flood plain provided a prime agricultural location that is not suited for building. Because of these two traits, it continues to be used for crops and pasturage. Finally, a third conglomeration of fields can be seen northwest of the town of Scottsville, where a relatively flat topography has encouraged the continuation of agricultural uses.

Section 7 Page 2

Hay production and grazing for cattle and horses dominates agricultural uses, although crops including soybeans and corn can still be seen growing throughout the district's agricultural areas. Pasture land is primarily planted in fescue or bluegrass with occasional outcroppings of invasive grasses such as Johnson Grass or Broom Straw. Virginia Cedar trees and Canadian Thistles are also commonly found in abandoned or un-maintained fields. Viniculture also represents a small, but economically important, agricultural use and there are currently five vineyards located in the district.

The landscape remains undeveloped throughout much of the district with just over 65% of the land being divided into parcels of 100 acres or larger. However, these 54,019 acres are found on only 184 lots, or 6% of the total number of parcels in the district. The small percentage demonstrates that a majority of the land is held by a small minority of the population. So while the number of landholders has grown since the initial settlement by a few landowners holding large patents, the current ownership profile continues to reflect the historic landownership patterns. These parcels also dominate the agricultural and forestry uses in the district, although smaller scale livestock production can be seen on parcels under fifty acres. A vast minority of the parcels (less than 10%) are one acre or smaller (a statistic that includes the small parcels historically associated with worker's housing in Alberene, Esmont, Damon and Dominion), indicating that widespread suburbanization has not impacted the rural character of the district.

Almost all of the parcels have been drawn to reflect a straight surveyor's line instead of depending on geographical features for their form. However, exceptions are found where lots run along either roads or rivers, reflecting the importance of transportation routes in the development of the district. Indeed, of the 2,771 individual parcels, 2,198 (or 79%) of them have frontage along a publicly maintained road. These parcels, which also account for 89% of the district's acreage, reflect how overland transportation, even with the proximity to the Rivanna, James, Hardware, and Rockfish Rivers, has played a major role in the formation of the landscape.

The edges of parcels that are not defined by roads, forests, or rivers are most often delineated with fence lines. Fence lines are also used intra-parcel to divide lots into individual fields. The two major types of fencing material in the district are horizontal wooden board fences and woven wire fences. Three-board and four-board designs are the two dominate types of wooden fencing. Traditionally locust or chestnut has been used as the primary material for wooden fence posts and oak planks for the fence boards and these materials can still be seen in the older fence lines. However, due to the Chestnut Blight and the issues involved with obtaining a constant supply of locust, the more recent wooden fence lines incorporate pressure treated pine posts. The fences are usually painted black, although white board fencing is also common in the district. Wooden fencing is primarily found on the larger parcels or for fields intended to hold horses. The wire fencing, which is usually woven to form a grid of squares, is stapled to round or half-round posts and traditionally features a single strand of barbed-wire running across the top. Woven wire fencing is primarily used in the district to contain cattle and as a property boundary marker. Newer lines of fencing are often free of vegetation, while older fence lines (twenty years and older) frequently feature sizeable Virginia cedar trees as well as a mixture of traditional hardwoods (Oaks, Maples, and Poplars) and exotic/invasive non-native trees such as Princess Trees (*Paulownia tomentosa*) and Tree-of-Heaven (*Ailanthus altissima*). In addition to trees, vines such as honeysuckle and smaller

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 3

shrubs such as privet can often be seen growing over abandoned or unmaintained fence lines. A small number of newer dwellings feature vinyl fencing along the street, although this trend is not widespread.

In addition to the extensive road system, the district also holds an impressive collection of riparian resources. Of the four rivers that flow through the district, the Rivanna and the James are by far the largest. While the remaining two rivers, the Hardware and the Rockfish, are tributaries to the James, they are still large enough geographical features to have affected the development of the district, often defining the boundaries between neighboring parcels. Unlike rivers, streams do not appear to have had a major affect on the region's development and are often found running through parcels. Approximately 908 of the parcels (mainly consisting of larger lots that account for 76% of the land in the district) contain a portion of a stream, reflecting the importance of access to water to the agricultural development of the district. In addition to spurring the development of agriculture in the district, the streams also played a vital role in the development of water-powered mills. These mills, while having little impact on the landscape other than the mill ponds (such as the surviving pond at Clifton), were vital in the economic history of the region and allowed for the processing of grain that was either grown locally or brought into the district along the canals, turnpikes, or later railroads.

Additional water resources include the 116 lakes or ponds in the district, with the smaller, approximately less than an acre bodies of water being known as ponds. These lakes and ponds, which are exclusively man-made, were almost all formed as small water impoundment projects for agricultural or industrial needs. The lakes are found scattered throughout the northern four-fifths of the district with no lakes found in the lower, less-developed, and more mountainous portion. The largest lake in the district covers seventeen acres and is found at Ellerslie (002-0484/002-5045-1557). Ellerslie also holds the greatest concentration of lakes within the district.

The Green Mountain chain, the district's other large geographical feature, has also affected the development of the district's cultural landscape. The mountains in the district form the southern half of the larger Southwest Mountains chain. From their individual foots, the final heights vary from approximately three hundred feet (Mount Alto, elevation 734 feet above sea level) to one thousand feet (Carter's Mountain, elevation 1580 feet above sea level), with the mountains growing progressively larger as they travel northwestwardly. On the southern half of the mountain chain, the Green Mountain Road runs along the ridge line and divides most of the parcels to the east or west of the ridge. However, drawing parcels to fall on either side of the mountain ridge is not limited to the section containing the Green Mountain Road. Many of the parcels along the northern section of the mountain chain also fall on either the east or west side of the mountain. Notable exceptions to this trend include Monticello, Carter's Mountain Orchard, Montalto (or Brown's Mountain/Patterson's Mountain), and Round Top Farm. All of these tracts encompass an entire mountaintop and all are found in the northern half of the district. The mountains also influenced the development of the district's roads, and ultimately its whole landscape, due to the necessity of siting the course of the roads through gaps between the individual mountains and on well-draining high ground. A majority of the routes taken by the major east/west roads in the district, including Irish Road and the Rockfish River Turnpike, are examples of the profound influence of mountain gaps on the district's landscape.

Section 7 Page 4

Designed landscapes are also prevalent throughout the district, associated with domestic or residential resources. A vast majority of these landscapes are based on vernacular forms that feature level lawns interspersed with shade trees and foundation plantings, often highlighted with mixed perennial and annual borders and flowering trees. Edging and boundaries for these resources include either straight or curvilinear lines. A small minority of the designed landscapes include professionally designed gardens of a recognizable style. Regardless of the design landscape's stylistic underpinnings, all feature a mixture of native and exotic species that include a variety of flowering or ornamental shrubs and trees (along with more ephemeral annuals and perennials). Examples common to the district include crepe myrtles, boxwood (English and American being the most common varieties), Japanese hollies, American hollies, hardy hibiscus, dogwood, redbud, azaleas, magnolias (Grandiflora, Tulip, and Star being the most common varieties), yuccas, blue spruce, apple trees, crab apple trees, flowering cherry trees, creeping junipers and a wide variety of other exotic or specimen plantings that are not common throughout the district.

The district's overall landscape is very similar to the other three other National Register nominated rural historic districts in the region. The Southwest Mountains (Albemarle County; 002-1832) and Madison-Barbour Rural Historic Districts (Orange County, 068-0304), as well as the Green Springs National Historic Landmark District (Louisa County 054-0111) all share a similar rolling, Piedmont Virginia landscape. Additionally, similarities in the initial settlement and agricultural development of all four rural historic districts have also resulted in comparable vegetation and historic land use patterns. In fact, the Southwest Mountains, Madison-Barbour, and Southern Albemarle Rural Historic Districts each share a portion of the Southwest Mountains chain. However, there are some noticeable differences between the four districts. The Green Springs National Landmark District is almost entirely contained in a large bowl-like volcanic depression that is rarely found in Virginia. The other major variation is the four rivers and their associated flood plains located in the Southern Albemarle Rural Historic District. The only river found in the three other rural historic districts is the Rapidan River (a tributary to the Rappahannock River) that serves as the northern boundary of the Madison-Barbour Rural Historic District.

Architectural Analysis

The Southern Albemarle Rural Historic District contains a myriad of styled resources, mostly residential types, as well as a plethora of vernacular resources. The vernacular resources cover a broad range of building types such as dwellings, commercial buildings, churches, schools, agricultural buildings, and grist mills to name only a few. Numerous supporting outbuildings are also present. Because of the extremely large size of the district, the architectural description of the district is divided into three distinct sections: styled residential resources, vernacular dwellings, and non-residential resources.

In the first section, the architectural vitality of the district will be discussed through its numerous high-style resources that represent commonly found styles, as well as a few examples of more unique designs. It is important to note that the style dates are not rigid, but are an approximate date of the style's use. Notably, the district contains a large number of dwellings that represent pure Jeffersonian Classicism, with the resources in the district presenting one of the best representations of the style in the world. Jefferson's direct influence is noted for many of these buildings and they were either designed by him, his workers, or his friends and neighbors.

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 5

Additionally, they represent the immense impact of his social and political views in the district. The second section will discuss the vernacular residential architecture that is prolific throughout the district. Due to the district's rural nature and economic history, the landscape was home to a large number of lower and middle class farmers and merchants as well as the planter-class gentry. Lacking the finances to produce high-style dwellings, these residents built their own buildings using regional construction techniques and plans. Consequently, the majority of the resources documented in the district are vernacular in nature, lack significant embellishment, and differ in plan types as compared to high style examples. To recognize these vernacular dwelling types, a separate section will be devoted to a discussion of the major types and forms, such as log dwellings, hall-and-parlor (or hall-and-chamber) houses, mill houses, I-houses, and workers' housing. Finally, the third section will consider the various non-residential resources such as agricultural buildings, mills, schools, churches, commercial buildings, fraternal meeting halls, and supporting outbuildings found throughout the district.

ARCHITECTURAL EVOLUTION: STYLED DWELLINGS

Georgian

Although Native American sites have been archaeologically documented within the district boundaries, including the James River village settlements at Warren, no extant pre-contact architectural resources remain. The earliest standing resources within the Southern Albemarle Rural Historic District date to the eighteenth century. While vernacular structures were the preliminary dwellings built in the district, as seen at Lennox, Plain Dealing, Viewmont, Shadwell, Blenheim, and others, more stylistic examples arose in the 1760s and 1770s. The design of these dwellings corresponds generally with the Georgian period of architecture (1700 to 1780), although the period's influence extends slightly later in the district due to its rural location. The Georgian style was popular for residential structures in the English colonies with slight variations between the north, mid-Atlantic, and the southern colonies. Many of the remaining Georgian-style houses in Virginia were built as centers of large plantations and were used by the rural gentry to exhibit their taste and style to their neighbors and peers. The basic components of the style include a rectangular-shaped footprint, bilateral symmetry (façade and plan), symmetrical fenestration, one to two stories in height, three or five bays wide, double-hung windows, moderately overhanging eaves, a molded cornice and a central entry often accented with a simple rectangular transom. In addition to these characteristics, the high-style Georgian resources in Virginia commonly feature three- or five-part plans, string courses between each floor, water tables, and accentuated elements including the windows, doors, and wall corners. Although there are no exuberant high-style examples of the Georgian style in the Southern Albemarle Rural Historic District, there are several more moderate resources that exhibit vernacular tendencies, but reveal the basic characteristics of the style.

River Lawn (1790 circa, 002-0107), located near the southern edge of Albemarle County along the James River is a reserved example of a two-story Georgian-style residence within the historic district. Constructed of timber frame, River Lawn is comprised of a typical three-part Georgian footprint with a two-story rectangular block flanked by recessed one-story wings. Set on a solid brick foundation with weatherboard-clad walls pierced with six-over-six wood-sash windows, the structure features a central, double-leaf, two-paneled wood door that is covered with a one-story, one-bay, gabled-roof portico. Supported with Doric columns and pilasters, the portico

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 6

is a replacement of a two-story gabled portico that may have been added during the late eighteenth century. Rising above the side-gabled roof are two exterior-end, corbelled brick chimneys. Although quite modest in its detailing, River Lawn house does feature a heavy denticulated cornice typical of the Georgian period.

Another example of a multiple-story Georgian-style resource is the house built for Walter Coles, son of John Coles of Enniscorthy, in 1796. Historically called Woodville, due to the abundance of forests on the landscape, the dwelling is now referred to as Old Woodville (002-0062) due to the construction of a second dwelling named Woodville. Woodville was built by William Bates, a local builder who may have also built Edgemont. Hugh Chisholm, who was one of Jefferson's workmen, is also known to have installed the plasterwork. Two-and-half stories in height and three bays wide, this wood-frame dwelling originally featured a rectangular-shaped footprint with a double-pile plan. In 1799, when Walter Coles insured the property with the Mutual Assurance Society the house was valued at \$2,300. Six years later it was valued at \$3,300 with no other building improvements noted on the policy. In 1832 a recessed east wing was added to the 1796 main block. The façade was balanced in 1948 when a recessed west wing was built. The weatherboard-clad house rests on a Flemish bond brick foundation and the façade is pierced with nine-over-nine wood-sash windows and a single-leaf paneled Dutch door. The one-story portico supported with fluted Tuscan posts that shelters the central entry is most likely a replacement porch. Typical of the Georgian style and distinguishing this house from contemporary Federal-style houses is the steeply pitched side-gabled roof, gabled dormers, and the four exterior-end corbeled brick chimneys. Old Woodville was renovated in 1948 by the Colonial Revival restoration architect Floyd Johnson.

Another notable example of the Georgian period is Plain Dealing (1761 and 1789, 002-0065), located near Keene. The dwelling is one of the more interesting houses in southern Albemarle County and typifies an evolved H-house plan. H-plans, which feature a second house built parallel to the first house and connected by a hyphen, were not particularly uncommon during the Georgian and Federal period and have been linked with a growing appreciation for separate public and private spaces. The original 1761 wood-frame structure is one-and-a-half stories in height and three bays wide with a central entry, exterior-end chimneys, and three gabled dormers. In 1789, the second house was added onto Plain Dealing and connected with an open hyphen, which was later enclosed. The 1789 block is a typical I-house, two-stories in height and five bays wide with a central entry, a one-story portico, and two exterior-end chimneys. The dwelling is detailed with a heavy modillion course cornice and, according to *The Architecture of Jefferson County*, contains some of the finest interior woodwork in the county.² A circa 1780 H-plan dwelling also existed at Mount Warren (002-0239/002-5045-1046), home of Governor Wilson Cary Nicholas, but the house burned in 1926. Edward Carter also constructed an H-plan dwelling at Blenheim (002-0005/002-5045-0239) prior to 1799, although it too no longer survives.

Bellair (circa 1790, 002-0002/002-5045-1211), located on the Hardware River near Carter's Bridge, is another important example of the Georgian style in Southern Albemarle. The wood-frame, two-story, side-gabled dwelling features a five-bay façade with a central entry. Detailing includes a multi-light transom, a dented cornice, exterior-end shouldered chimneys, and one-story side-gabled wings added in 1822.

Other examples of representative wood-frame domestic buildings of the period, primarily vernacular, include

**United States Department of the Interior
National Park Service****NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET****Southern Albemarle Rural Historic District
Albemarle County, VA**Section 7 Page 7

single- and- double-pile dwellings standing from one-to-two stories with hall-parlor, single-cell, and center-hall plans, as evidenced by Viewmont (circa 1730, 002-0080, demolished), Locust Hill (circa 1760, 002-0583/002-5045-0533), and James Monroe's Ash Lawn/Highland (circa 1793, 002-0099/002-5045-0531), among others. Totier Creek (circa 1800, 002-0192/002-5045-1279) is an unadorned example of the Georgian style, while the original house at Colle (circa 1774, 002-0159, demolished) represented a telescopic plan from the period.

Federal

More elegant and refined than the Georgian style, the Federal style dates from about 1780 to 1820, and became the dominant style throughout America during this period. However, it was particularly popular with the mercantile class in coastal cities with strong ties to England. The Federal style incorporates many more Renaissance-inspired elements than the Georgian style, such as Palladian windows and small one-story classically proportioned porches. Examples of the Federal style in Albemarle County, and throughout Virginia as a whole, are typically built of brick masonry with Flemish bond facades. The side and rear elevations of Federal-style buildings would often vary between either Flemish or American brick bond. Other characteristics of this style include symmetrical fenestration, a semi-circular or elliptical fanlight over a central entry, attenuated ornament, a decorative door crown, flat lintels, modillions, low pitched roofs, smooth wall surfaces, and, in some examples, decorative swag motifs. Much of these refined high-style details are substantially diluted once applied to rural Virginia architecture; however, several examples in the district, including Redlands, reveal the style at its height.

Built for Robert Carter in 1792-1798, Redlands (002-0067/002-5045-1488) is one of the most notable Federal-era dwellings in the district. Standing two-and-a-half stories, this brick mansion is architecturally significant for its apparent retention of a Georgian form in its augmented double-pile plan that is combined with stylistically contrasting front and rear elevations. The five-bay Georgian entrance façade is flush with a smooth wall surface but contains irregular, bi-laterally symmetrical fenestration and a three-bay columned portico (possibly added later). Opposing this elevation is the rear Federal-style elevation that is elegantly distinguished with a two-story central bow. Other Federal-style details include a shallow pitched hipped roof, a modillion cornice, a fanlight transom on the facade, narrow gabled dormers, and flat lintels. The interior features a distinctive central oval drawing room, and woodwork and mantels that derive their details from William Pain's *Carpenter and Joiners Repository, Practical House Carpenter & British Palladio*. According to *The Virginia Landmarks Register*, Redlands stands as "one of the Commonwealth's most important Federal-period landmarks."³ The design is attributed to William Thacker with Colonial Revival-era updates by Baltimore architect Howard Sill.

Other examples of Federal-style resources in the Southern Albemarle Rural Historic District include Woodlawn (1810 circa, 002-0060/002-5045-0139), Brookhill (1820 circa, 002-0009/002-5045-0130), Tallwood (1803, 002-0073/002-5045-0620), and Morven (1821, 002-0054/002-5045-0166). Each of these residences is two stories in height, features Flemish bond brick facades, has either two or four exterior-end chimneys, and extends either three or five bays wide with a central entry illuminated with a transom. Typical of the Federal style, Morven features a fanlight transom whereas Brookhill and Woodlawn both have rectangular transoms either carried over from the Georgian style or, as in the case of Brookhill, depicting a transition to the Jeffersonian and Greek

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 8

Revival styles. In addition, each dwelling has a one-story portico supported with either paired or single columns sheltering their primary entries, a feature that appears to be common among residences built during the Federal period. Interestingly, each residence varies in its cornice style, Brookhill features corbeled bricks, Woodlawn uses a houndstooth brick cornice, and Morven is detailed with brick corbelling and a wood cornice featuring block modillions.

The initial design for Morven, which included three octagonal bays in the design, was executed by Thomas Jefferson. However this scheme was never constructed and it was a more conventional design by Martin Thacker that was constructed in 1821. In form, the five-bay, double-pile dwelling does feature some heavy Georgian characteristics, including the massing and block modillion cornice. The dwelling's central entrance, which is articulated with a fanlight detailed with delicate tracery, is a tell-tale indication of its the Federal style roots. However, the use of the Tuscan columned porticos also shows the Jeffersonian influence on the Federal style in the district. An earlier circa 1796 dwelling is also located on the property, which was known as Indian Camp during the early years of the county's existence. The formal gardens were restored in the 1930s by renowned landscape architect Annette Hoyt Flanders of New York.⁴

A wood-frame example of the Federal style is Tallwood, a Coles family home located on Green Mountain. The circa 1803 dwelling was built for Tucker Coles and his wife Helen Skipwith Coles. Tallwood is touted as "one of the finest examples of a frame Federal house in Albemarle County", although strong influences of Jeffersonian Classicism are evident.⁵ Featuring a five-bay main block, the façade is dominated by a Jeffersonian double-tiered central portico with paired Tuscan columns, a Chinese Chippendale rail, and a closed tympanum with a lunette window. More purely Federal, the double-leaf central entry is capped by a fanlight with delicate tracery. The second floor was added in 1820 and the wings were constructed circa 1826. The dining room in Tallwood featured a circa 1857 punkah, or large fan, from India that hung over the dining room table. The ornate stone art nouveau gates leading to Tallwood were constructed by the Italian artist Olinto Ceccarelli in 1903. The landscape at Tallwood includes an alleé of trees and formal gardens, which include low-hanging English Yew trees that form exterior rooms. Sadly this exquisite dwelling has been abandoned and is in desperate need of stabilization or restoration.

Early Classical Revival

The Early Classical Revival style had its start during the late-eighteenth century and is contemporaneous to the Federal style. The Federal style exhibits numerous classical features but it is modest in its interpretation. Early Classical Revival buildings in America, on the other hand, sought to revert to the original forms used in the Roman and Greek republics. However, many of these details were actually derived from British Palladianism and the 16th-century Italian architect Andrea Palladio (1508-1580). Thomas Jefferson, a life-long resident of the district, was the forerunner of this early use of classical architectural forms in Virginia and blended the Federal style with Roman classical elements and eighteenth-century continental architectural theory. Jefferson theorized that the architecture of the newly formed country should follow an appropriate "associationism" with its new politics.⁶ He believed this association should be encapsulated with ideas that the architecture be "forthright, well balanced, moderate, and proportional."⁷ Additionally, he saw these principals as representing republican ideals

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 9

and he associated them not with the English monarchy, but with the principals instead resting with the republican-era Romans and democratic Greeks.

The Early Classical Revival, including Jeffersonian Classicism, is typified by a dominant front entry portico, which usually rises to the full height of the façade, and is capped with a centered gable. Often attenuated, the portico is supported with classical-style columns either of Tuscan or Doric forms. A semi-circular or elliptical fanlight illuminates the central entry and a similar window is often located in the tympanum of the portico. Similar to the Georgian and Federal styles, Early Classical Revival buildings are symmetrical in fenestration with a central entry and typically five bays on the façade; less common are three bay facades. Clifton (circa 1802, 002-0155/002-5045-0044) is an example of the style being applied to two-story wood-framed dwellings. The two-story wood-frame dwelling features both an elliptical fanlight and originally featured an attenuated two-story gabled portico. Clifton has been altered and now includes a circa 1940 two-story, shed-roof, Mount Vernon-type full-width portico. Other examples of the Early Classical style within the Southern Albemarle Rural Historic District include the Palladian-inspired tripartite dwelling at Mountain Grove (1800 circa, 002-0095/002-5045-0952) as well as Canaan/Bushy Park (1785, 002-0444/002-5045-1070), and Glendower (1808, 002-0040/002-5045-1278). The first design of Monticello in the 1770s also represented this form.

Thomas Jefferson was one of the most important architects/builders of the Early Classical Revival period, as can be seen in his unconventional and avant-garde designs of the Virginia State Capitol in Richmond, the campus of the University of Virginia in Charlottesville, and his own home, Monticello (1809, 002-0050/002-5045-0050), which is sited within the historic district. Jefferson was fond of adapting elements designed by Andrea Palladio as he observed in pattern books such as Giacomo Leoni's edition of *The Architecture of A. Palladio; in Four Books 1716-1720*. Particularly in Virginia, the Roman Revival phase of the Classical Revival has also been referred to as Jeffersonian Classicism. Additionally, Albemarle County is the premiere location for observing its domestic varieties. This is due to the approximately two hundred craftsmen and builders that Jefferson employed during his lifetime. These men often embraced his architectural theories and design elements in their own works, thereby disseminating the Jeffersonian style throughout the region. Additionally, Jefferson's significant influence over his wealthy friends and neighbors also contributed to the adoption of the style in the district. Monticello was designed by Jefferson and Edgemont is attributed to Jefferson.⁸ A small list of Jefferson's many craftsmen includes James Dinsmore, John Neilson, the Perry brothers, William B. Phillips, Malcolm Crawford, James Oldham, and William Dunkhill. These builders took his designs and created their own interpretations, which can be seen in the historic district at properties such as Estouteville (1827-1830, 002-0032/002-5045-0598), the William Walker House (1803, 002-0197/002-5045-1093), Sunnyfields (circa 1840, 002-0480/002-5045-0980), and Christ Episcopal Church at Glendower (1832, 002-0014/002-5045-0639), among others.

Monticello (002-0050/002-5045-0050) stands out as Jefferson's architectural masterpiece. Although never fully finished during Jefferson's lifetime, the brick masonry house, begun in the 1770s, underwent its last major renovations between 1796 and 1808. Incorporating a temple front and a domed roof, the dwelling manifestly references architectural elements that were almost exclusively reserved for public and governmental buildings prior to this time in Virginia and the colonies of the early Republic. The plan focuses on rational geometric

Section 7 Page 10

shapes, and the spaces are arranged so that the central public rooms (the parlor and entry hall) divide the less public eastern side (which holds the dining room) from the exclusively private sleeping and contemplative spaces on the west side. The interior ornamentation, much of which was copied exactly from Palladio's architectural treatise "*The Four Books of Architecture*," features a range of classical motifs, including bucrania, cupids, swags, griffins and classical architectural features such as bands of egg-and-dart moldings. Jefferson referred to his evolving dwelling as "my essay in architecture" and many essays and books have been written about the structure, making it perhaps one of the most thoroughly researched houses in the United States.

Often attributed to Thomas Jefferson, Edgemont was originally built for James Powell Cocke circa 1796.⁹ The design of Edgemont is based on Andrea Palladio's Villa Capra, or as it is sometimes known, Villa Rotunda, and features four porticos in reference to Palladio's original design. Two of the porticos are original to the building, but the other two were added during Colonial Revival-era renovations. The portico on the north elevation is particularly interesting as it is designed after similar features found at Poplar Forest and Pavilion VII at the University of Virginia, both designed by Jefferson.

Built into a hill, Edgemont reveals a one-story façade with central gabled portico, a hipped roof, and wood siding with applied quoins to give the dwelling the appearance of stone construction. A grand sense of proportion, a lunette window in the portico's tympanum and double-hung 9/9 wood windows finely detail this dwelling. The rear elevation rises two stories and is accentuated with a double portico. The interior spaces are arranged around an octagonal room that leads to each of the porticos. The dwelling underwent extensive renovations in 1938 and 1946 under the direction of Milton Grigg, a prominent local architect who is responsible for renovating many of the region's outstanding architectural designs. Milton Grigg is also responsible for the two dependencies that flank the house. The dependencies are connected to the main house with underground passages, similar to the ones used by Jefferson at Monticello. While the structure is no longer a pure product of the eighteenth century, the masterful Colonial Revival-inspired alterations, introduced by Grigg in the mid-twentieth century, have proven to be important in their own right. Edgemont also features extensive formal terraced gardens that have been restored and a unique avant-garde 1967 pool house that was also designed by Grigg.

The Jeffersonian influence as a whole is also important to the architectural fabric of eastern Albemarle. Through the work of Jefferson and his skilled craftsmen, Jeffersonian Classicism became a dominant style in rural Albemarle County, as well as throughout the Piedmont. Profoundly significant in the Southern Albemarle Rural Historic District, the widespread use of Jeffersonian architecture overshadows many of the later architectural styles that were ubiquitous throughout the nation. The work undertaken in the district by Jefferson's builders clearly shows the style's importance.

Sunnyfields was constructed by master Jeffersonian craftsman William B. Phillips in the 1830s as his own home. The two-story, three-bay, double-pile dwelling is constructed of brick and capped with a hipped roof. Symmetrically fenestrated, the dwelling features a central entry with multi-light sidelights and transom as well as classical detailing and proportions.

Section 7 Page 11

While not specifically known to be designed by Jefferson, Esmont (002-0030/002-5045-1480), is one such building that denotes a clear influence. While no direct link to Jefferson or his builders has been found, the architectural massing and detailing is clearly Jeffersonian. Esmont was originally built between 1816 and 1820 for Dr. Charles Cocke, a nephew of James Powell Cocke of Edgemont, and a member of the Virginia House of Delegates and State Senate. The house, which is constructed in the double-pile, hipped-roof form that was popular for high-style dwellings throughout the region, contains many distinguishing decorative elements. On the exterior, a full Doric entablature, Flemish bond brickwork, a plastered belt course and unusual tripartite, triple-hung windows endow the house with an impressive bearing. Important interior elements include ornamental plaster ceilings and silver-plated locks, as well as a herringbone patterned wood floor, one of the few known to exist in Virginia outside of Monticello. Esmont was renovated in 1953 by Floyd Johnson, a prominent local architect who worked closely with Milton Grigg in the 1930s and 1940s. Changes to the structure during this period include installation of a marble mantel from New York City's John Jacob Astor house.

Notable as a smaller, one-story Jeffersonian residence within the district is the William Walker House (002-0197/002-5045-1093). The dwelling was built by James Walker, a Jefferson craftsman, in 1803 for his brother William Walker, a prominent mill owner in Warren. Three bays wide on the façade and four bays deep, this brick house is set on a raised English basement and features a gabled portico sheltering the central entry. The portico is supported with two Tuscan posts and pilasters and the pediment is pierced with a multi-light, semi-circular lunette. Carryovers from the Federal style are the nine-over-nine windows, jack-arch lintels, a rectangular transom, and the shallow-pitched hipped roof. The dwelling is a quintessential Jefferson-inspired design.

One of the most prominent Jeffersonian Early Classical Revival houses within the region, sited within the district, is Estouteville (002-0032/002-5045-0598) located on Green Mountain. Begun in 1827 for John Coles III, this Flemish-bond brick dwelling is an excellent representation of the Early Classical style with its prototypical full-height tetrastyle porticos supported with Tuscan columns. Typical of Early Classical Revival resources, this building features a three-part plan using a two-story center block flanked with one story wings. Other features exhibited by Estouteville common to the Early Classical Revival include a raised basement, full Tuscan entablatures, a semi-circular fanlight over the central entry, symmetrical fenestration, seven-bay façade, and a shallow-pitched hipped roof. Noted Jefferson builder, James Dinsmore, who died before the start of construction, is believed to have designed the dwelling with brickwork executed by William B. Phillips. The center hall, which features an elaborate cornice with bucrania, is touted as "one of the noblest rooms in Virginia."¹⁰ *The Virginia Landmarks Register* states that "Dinsmore produced a masterpiece in what may be regarded as America's first native academic style. With its porticoed facades and lofty interiors, few buildings better meet Jefferson's ideal of an architecturally refined seat suitable for the young Republic's landed families or so well conform to the popular image of a patrician southern homestead."¹¹

One of the less common types of the Early Classical Revival style is a three-part plan with a front-gabled center block flanked by smaller gabled wings. This plan was introduced by Andrea Palladio and is referred to as the Palladian three-part, or tripartite, plan. One example of the Palladian plan that stands within the Southern

Albemarle Rural Historic District is Mountain Grove (002-0095/002-5045-0952) built around 1803-1804 for Captain Benjamin Harris, of the prominent Harris family. Set on a raised basement, this brick dwelling has a three-bay center block flanked by one-story, one-bay wings. It features symmetrical fenestration, a central entry illuminated with a rectangular transom, a bull's eye window in the tympanum of the front pediment, jack-arch lintels, and a wood cornice with block modillions on each section. The interior retains original woodwork with exuberant painting and graining, believed to be associated with the American Fancy Movement.

Greek Revival

The Greek Revival style, which became popular during the Classical Revival period, began in approximately 1830, nearly a decade after the Roman Revival period had reached its zenith. It was during the 1840s and 1850s that this style became one of the prominent stylistic choices among local builders in Albemarle County. Interestingly, many of the Greek Revival dwellings throughout the district still maintained ties to Jeffersonian influence, with few pure Greek Revival examples found in the district.

The Greek Revival style was widely disseminated through the publication of carpenter's guides and pattern books. Among the most influential of these were Asher Benjamin's *The Practical House Carpenter* and *The Builder's Guide*. Like the dwellings erected in the previous period, the residences of the antebellum period typically have central-passage, single-pile plans with Greek Revival proportions and applied elements. Whereas the Federal style derived from Palladian ideals of ancient Roman design, the Greek Revival adhered strictly to the Greek Orders and their systems of proportion and ornament. The Greek Revival style, as well as Roman-influenced Jeffersonian Classicism, was popular for governmental, religious, and other public buildings as the style was thought to evoke democratic principles. Although often embraced for these public displays of architectural symbolism, the style was also popular for domestic architecture. In particular, it was often used to update an existing dwelling with modern, fashionable detailing.

As a stylistic influence, the Greek Revival filtered down to even the most modest of rural farmhouses with widespread vernacular use throughout the nation. Like the dwellings erected in the previous period, the Greek Revival domestic buildings of the antebellum period often maintained the central-passage, single-pile plan, but incorporated Greek Revival proportions and applied decorations. Grander domestic examples generally featured a columned portico supporting a triangular pediment, as on a Greek temple. Country builders accomplished the same effect simply by turning the gable end of a house to the street, boxing in the gable with a triangular raking cornice, or adding pilasters to the corners. The bold style was further represented by the use of a large impressive doorway, often detailed with a multi-light transom, sidelights, and columns or pilasters. Simpler interpretations also included shallow-pitched gabled roofs, symmetrical fenestration, a heavily molded cornice, often with gable returns evoking a triangular pediment, and/or a column-supported porch.

The Greek Revival differs from the earlier classical styles with typical characteristics of a heavier and wider cornice band, a shallow-pitched hipped roof, and flat-roof porticos of varied heights, widths, and number of tiers. Ionic and Corinthian columns were introduced and pilasters became commonplace. Sidelights, rectangular transoms, and elaborate door surrounds are additional characteristics of the Greek Revival period. Representative

Section 7 Page 13

examples of the Greek Revival style on residential buildings in the district include Mt. Pleasant (1820 circa, 002-0500/002-5045-1146), Enniscorthy (1850, 002-0028/002-5045-0564), Auburn Hill (1840 circa, 002-0118/002-5045-0189), Monticola (1853, 002-0051/002-5045-1590), Tufton (002-0077/002-5045-0213), Hillcrest (002-5045-1592), and Roundtop (1834 circa, 002-007/002-5045-0515), among others. Examples of the Greek Revival style that are more vernacular in treatment are illustrated throughout the district including Rolling Acres (1820s, 002-0038/002-5045-0494), The Rectory (circa 1848, 002-1831/002-5045-0638), Hatton Grange (1831, 002-0105/002-5045-1439), the Inn at Monticello (1856, 002-0079/002-5045-0097), and Mt. Ida (1790/1850 circa, 002-5001/002-5045-1172). Most of these vernacular examples have only one Greek Revival feature such as trabeated systems used for porticoes, tripartite window or door bays, or, most commonly, a three-part transom, which is typically incorporated into the door surround.

Typical of simple Greek Revival houses, Mt. Pleasant stands two stories tall and the façade is three bays wide with a one-story portico sheltering the central entry. Interestingly, Mt. Pleasant is one of the more exceptional Greek Revival houses in the area because of its application of a full-height tristyle porch on the side (non-principal) elevation. Extending the roofline, the portico creates an uninterrupted rectangular-shaped footprint. Carried over from the Federal style and classifying Mt. Pleasant as an early Greek Revival house, is the semi-circular fanlight above the front entry. Other details of interest include the Flemish bond brick construction, a low-pitched gabled roof with pedimented ends, paneled posts on the front portico, and a heavily molded wood cornice.

Monticola, a two-story, double-pile brick dwelling, typifies the Greek Revival style. Featuring a hipped roof, four full-height pilasters, and four central-interior chimneys, the dwelling also presents a double-tiered portico with closed tympanum (altered circa 1900). A pyramidal-roofed belvedere crowns the roof, while a recessed entrance with square transom and sidelights and large six-over-six double-hung windows further define the three-bay façade.

The circa 1850 brick mansion Enniscorthy, which replaced an earlier dwelling destroyed by fire, is a prototypical Greek Revival house with a two-story main block that is three bays wide. Further defined by a flat-roof portico over the central entry, the dwelling also features tripartite window and door bays. Supporting the portico are paired Tuscan columns and pilasters and the entry is illuminated with a simple transom and sidelights. Each of the double-hung windows also features two-over-two sidelights.

Mid- to Late-Nineteenth Century Architecture

By the mid-nineteenth century a multitude of architectural influences had emerged, producing numerous fashionable styles and forms throughout rural areas. During this period, the rapid industrialization and the growth of the railroads also led to dramatic changes in house design and construction. Mass production of doors, windows, roofing, siding, and decorative detailing in large factories allowed merchandise to be shipped at relatively low costs. However, the impact of the Civil War (1861-1865) throughout Virginia during this period greatly restricted the progress of the early Victorian trends until after the close of the war. Although no major battles occurred in Albemarle County, the economy declined quickly, resulting in a downturn of domestic

construction. No dwellings were recorded as being constructed during the Civil War within the historic district..

Gothic Revival

Alexander Jackson Davis, one of America's first professional architects, was the first to develop the Gothic Revival style in the United States. Davis' Gothic designs and theories were propagated through his book *Rural Residences*, published in 1837. This was the first house plan book with complete three-dimensional views and floor plans published in the country. Andrew Jackson Downing drew upon Davis' work and published his first pattern book in 1842 entitled *Cottage Residences* and a second in 1850 called *The Architecture of Country Houses*. The buildings designed by Davis and Downing, and their pattern books popularized the Gothic Revival style throughout the country, particularly in rural America. Promoted by both Davis and Downing separately in their written works, the Gothic Revival style was deemed by them to be suitable only for the rural landscape because of its picturesque nature.

In *Cottage Residences*, Downing explains that "cultivated minds" in which "taste and imagination are active" desire and need objects of a different kind of beauty than those reflecting classical reason and order. He states that picturesque styles give a much more intense and enduring pleasure than those of the earlier periods.¹² He also criticizes the use of the Greek-style temple form for residential uses as inappropriate and not sensible. Brooding and romantic, the Gothic Revival style was a picturesque mode with vaulted ceilings, battlements, lancet-arched windows, and tracery, all suggesting the mysterious architectural vocabulary of the medieval past. The vernacular interpretations of the style were identified by steeply pitched roofs, decorative bargeboard, and one-story porches with flattened Gothic arches.

Beginning in popularity with Downing's first publication in 1842, the Gothic Revival style continued in use until approximately 1880. However, this latter date is a general approximation applied to dwellings in the country as a whole and the Gothic Revival style remained one of two common styles applied to ecclesiastical buildings throughout the twentieth century. Employment of the Gothic style to American churches seemed entirely appropriate due to associations with the first Gothic forms in medieval Europe. Several Gothic Revival churches stand in the district including St. Luke's Episcopal Church (1892 circa, 002-0478/002-5045-0219), Alberene Methodist Church (1900, 002-0758/002-5045-0979) and Centenary Church (1890, 002-1311/002-5045-0907).

An exemplary example of a Gothic Revival cottage in the district is Blenheim (002-0005/002-5045-0239) built for Andrew Stevenson in 1846. Built during the early phase of the Gothic Revival style, Blenheim exhibits the transition between the Greek Revival style and the Gothic Revival style. As Downing espoused, the Gothic Revival style should be applied to small cottage dwellings instead of towering cathedral-like houses. As a linear one-story cottage, Blenheim is illustrative of this ideal except for the continuation of the earlier period's balance and symmetry. Balanced Greek Revival elements include the symmetrical fenestration, porticoes, dormers, and the chimneys (to the extent that one chimney is false so as to provide symmetry), and in particular the trabeated porticoes. Typifying Gothic Revival style, Blenheim embraces the verticality associated with the use of pointed lancet arches in each of its gabled dormers and windows, and the use of Y-tracery in the windows. In addition,

Section 7 Page 15

Blenheim features square Tuscan posts and pilasters to support the porches, non-classical elements promoted by Downing in his works.

Italianate and Late Victorian Eclecticism

After the devastating Civil War, Virginia's Piedmont region and its economy gradually recovered. The repair, rebuilding and replacement of destroyed houses, barns, fencing, and mills became the primary objective of many of the residents. Expanding on the Victorian trends that began in the Civil War Period, the architecture of the Reconstruction and Growth Period (1866-1917) in Virginia incorporated more elaborate detailing and more intricate floor plans. Often, a number of elements were taken from various styles and were applied to vernacular house forms, as evidenced by a melding of Queen Anne, Gothic Revival, and Italianate detailing, repeatedly applied to the ubiquitous I-house dwelling. While these Victorian styles were used on a wide-scale basis throughout the United States, the Southern Albemarle district saw very few examples constructed.

One example of the melding of late nineteenth-century fashionable styles is the gatehouse cottage at Monticello (002-0050/002-5045-0050). Constructed circa 1880 in the late Victorian period, the structure melds Carpenter Gothic and Queen Anne detailing into a one-story brick structure that features a steeply-pitched cross-gabled slate roof, decorative fish-scale shingled gable ends, and diamond-paned casement windows.

Similar to the Gothic Revival, the Italianate style grew from a retreat of classical ideas and into a mode of picturesque idealism. The Italianate style was popular in America between 1850 and 1880, contemporary to the Gothic Revival style. Eventually proving to be even more popular in domestic architecture than the Gothic Revival style, it lasted well through the 1880s. This style was embraced in the numerous pattern books published following the Civil War, which promoted its popularity in rural farm houses and cottages. The Italianate style is defined by asymmetrical plans, square towers or cupolas, tall narrow windows, widely overhanging eaves with decorative eave brackets, half-round arched bays, heavily ornate window crowns and door surrounds, and low pitched roofs. Unlike the Gothic Revival, this style was better adapted to urban row houses; however, it also found a home throughout the American countryside. Very few examples exist in the district, but two examples include High Meadows (1883, 002-1020/002-5045-1298) near Scottsville and River View (1870 circa, 002-5045-1433) near the village of Hatton in the southernmost portion of the district. No longer standing examples include Ernscliff (circa 1854, 002-0482) and Nydrie (circa 1890, 002-0352/002-5045-1482; now demolished), the latter representing an eclectic example of the Italianate/Victorian style merged into a Scottish baronial castle. Nydrie was the largest dwelling in Albemarle County and was built on a scale that rivaled many Newport, RI mansions.¹³ The house featured a 22 x 61 foot, two-story entrance hall, a greenhouse with a swimming pool and iron water tanks in the crenellated towers. An impressive brick stable that is still standing reflects the scale of this grand architectural achievement.

High Meadows near Scottsville was originally built in 1832 with a two-story Italianate addition to the façade added in 1883. A few of the Italianate features are the paneled double-leaf doors, the center cross-gabled roof, wide eaves visually supported with decorative brackets, and a cut-out balustrade on the rooftop balcony. River View, also representing the style, has an asymmetrical footprint and features a double-pile plan, rises two stories

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 16

in height, and is capped with a low-pitched hipped roof. It is adorned with molded and scalloped window hoods, wide eaves, molded cornice returns, and decorative eave brackets. The ghost of a full-width porch across the first story remains on the façade. Keelona (circa 1870, 002-0487/002-5045-0625) once featured Italianate style brackets across the cornice. The brackets have since been removed. The dwelling at 350 Hardware Street (002-5045-1248) near Scottsville is also an example of the style applied to a more modest dwelling.

Queen Anne

The origin of the Queen Anne style is typically attributed to an English architect, Richard Norman Shaw, and his building designs from the 1870s. The Queen Anne style made its way to America and became a favorite at the 1876 Centennial Exhibition in Philadelphia. Immediately thereafter this style became widely influential across the country in both urban and rural environments and continued through the turn of the twentieth century. The style is characterized by the use of asymmetrical plans and a variety of exterior shapes and forms creating odd rooflines commonly accentuated with multiple gables. The advancement of sawing techniques and mass production allowed creation of a variety of shapes helping to give this style its ornate character. Houses were embellished with projecting oriels, bay windows, textured shingle cladding, wrap-around porches with turned posts, corner brackets, and spindlework. In addition, windows also contrasted a great deal with the Gothic Revival style, reverting to more rectangular panes set in a variety of balanced patterns. Not widespread in Albemarle County, only several examples of the Queen Anne style are found in the district. Interestingly, the most high-style examples were built by the New York-based Alberene Soapstone Company, including the President's House (1899, 002-0204-0001/002-5045-0016) and the Treasurer's House (1899, 002-0204-0003) in Alberene's Executive Row. Another example is 7127 Esmont Road (1893, 002-5045-1487), a small cottage with decorative spindlework, a heavily molded window crown, scroll-sawn brackets, and a decorative frieze. Versions that are more vernacular include 2205 James River Road (002-5045-1057) illustrative of an earlier dwelling with a slightly updated form, 5000 Christmas Hill Lane (1901, 002-5045-0069) with a Victorian two-story porch applied to a vernacular I-house form, and 2455 Plank Road (002-5045-0184).

Designed by J. Wellesley Smith, a New York City architect, and constructed in 1899, the Alberene Soapstone Company president's house was originally intended for use by the company's domestic engineers, Mr. Carroll and Mr. Bostwick. Clad with wood shingles on the second story and elaborate, rusticated soapstone block paneling on the first story, the President's House is an exemplary example of the Queen Anne style in the district. It features numerous gables and a complex roofline with the addition of a turret and several gabled dormers. Other common Queen Anne features include a wrap-around porch, stained glass sidelights, wide eaves, a molded wood cornice, a finial atop the turret, and hooded chimneys. The Palladian window in the upper story of the front gable suggests a stylistic transition to the Colonial Revival style.

Neoclassical

Many consider the World's Columbian Exposition of 1893 held in Chicago to be a pivotal moment in the revival of classicism in American Architecture, with the Beaux Arts style and its subtypes demonstrating particular influence. The Neoclassical style found widespread popularity in America at the turn of the twentieth century and persisted until around 1950. Often associated with civic architecture, Neoclassicism was also popular for

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 17

residential construction during the first half of the twentieth century. While not as widespread as the contemporaneous Colonial Revival style, more popular because it was easily adaptable to many different forms for all ranges of economic classes, its grand scale still found favor with an elite class of Americans.¹⁴ Neoclassical buildings closely resemble the Early Classical Revival (popular from 1770 to 1830) and the Greek Revival (1830 to 1850) but differ in a few crucial aspects. The Neoclassical style of the early twentieth century usually melds features from the Greek and Roman traditions instead of strictly adhering to a single prescribed order. The key elements for elaboration include the porch and columns, doorways, cornices, and windows.¹⁵ Elaborate, Federal-type moldings are rare and simple geometric forms were preferred. The design and plan were often based on the concept that each block or section of the house was dedicated to a single function.¹⁶

The archetypal Neoclassical house is characterized by a colossal full-height portico with columns that have either Ionic or Corinthian capitals. Symmetrically balanced, the scale of the buildings is much larger than those of the Greek Revival or Classical Revival styles. Neoclassical style houses feature central entrances, usually hipped or side-gabled roofs, and have a smooth wall surface usually of stone or brick. The rooflines are unadorned, which differs from the contemporary Beaux Arts style. During the first phase of the style, from 1900 to 1920, examples typically have hipped roofs and elaborate columns. The later phase, from 1920 to 1950, typically features a side-gabled roof with simple, slender columns supporting the porch.¹⁷ Greenfields (002-0769/002-5045-1496) built in 1904, located near Warren at the southern edge of the district, and the house at 46 James River Road (002-5045-1532) built circa 1920 on the outskirts of Scottsville, represent each of these phases respectively.

Greenfields is an illustrative example of a Neoclassical house in Albemarle County with its immense full-height inset porch on the façade supported with two-story Tuscan columns. Two-and-a-half stories in height and five bays wide, this dwelling has a large rectangular-shaped footprint and a central gabled dormer on the façade containing a half-round window. The façade features a central entry and a central balcony door on the second story, both of which are illuminated with elliptical transoms and multi-light sidelights. Furthermore, Greenfields is embellished with four paneled and corbeled brick chimneys, wide eaves, and a denticulated cornice.

Similar to Greenfields in that it also includes a central entry and a balcony entry above the principal entrance, the dwelling at 46 James River Road is much smaller in size with only three bays on the façade. Capped with a side-gabled roof, this house is dominated with a full-height portico covering only the central bay. A porch covers the full-width of the first story and from the center projects a two-story, two-tier portico. Other classical features include a molded cornice, a half-round fanlight in the gable of the portico, and Palladian windows in the gables of the side elevations.

Colonial Revival

The most prevalent style in the Southern Albemarle Rural Historic District, the Colonial Revival style, was embraced across the country soon after the 1876 Centennial Exhibition in Philadelphia. This enduring style continued through the twentieth century and is still in use after the turn of the twenty-first century. Borrowing elements from early American styles such as Georgian and Federal, the Colonial Revival style was largely an outgrowth of a newly found pride in the nation's past. In the early phase, the Colonial Revival style remained the

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 18

exclusive domain of fashionable architectural firms such as the nationally recognized firm and McKim, Mead, and White of New York, and was favored for the large residences of wealthy clients. Showing the wealth imported into the Southern Albemarle Rural Historic District during the period, an example of the work of McKim, Mead, and White is Guthrie Hall (002-0355/002-5045-1484). This wealthy class, which favored the use of the Colonial Revival for its architecture, greatly impacted rural Albemarle County during the “Country House Movement”. During this period, the Colonial Revival gained momentum in the area after the establishment of an architecture school at the University of Virginia in 1919, led by renowned Colonial Revival architect Fiske Kimball. Many of the school’s graduates worked locally in the mode, which included a Jeffersonian-inspired view of architecture.¹⁸ Many historic residences in the district were also renovated or restored during this period, including Monticello, Ash-Lawn, Redlands, Plain Dealing, Bellair, Edgemont, and Morven, to name a few. Notably, the Colonial Revival movement also prompted the restoration/redesign of several historic gardens associated with the larger, colonial and early republic period houses, including those at Redlands, Monticello, Edgemont, Morven and Enniscorthy.

Characteristic features incorporated into the designs of Colonial Revival buildings include strict adherence to symmetry, a central entry typically accentuated with a pedimented frontispiece supported with pilasters or slim columns, Palladian windows, paired double-hung sash windows, and other classical detailing such as swags and urns. Roof types varied from side gabled, hipped, to gambrel, the last of which was a reflection of Dutch Colonial architecture. The new country house dwelling type was larger than its historic counterparts with enlarged ornamentation and plans laid out on a grandiose scale. As the Colonial Revival style spread to rural areas, it was more conservative in design and scale, and was often applied to modest residences. In addition, the earlier Colonial Revival period, between 1880 and the 1920s, saw resources that were designed as a “free interpretation” of the style. Following the contractions of resources brought on by the Great Depression of the 1930s and the country’s involvement in World War II (1939-1945) and the Korean War (1950-1953), houses became much more simplified in details, ornamentation, and plans as well as scaled down in size.

The majority of the Colonial Revival resources within the district are modest vernacular versions of the style. However, one of the most notable and architecturally significant residences within the county is Guthrie Hall (002-0355/002-5045-1484), a grand Colonial Revival dwelling. Built around 1901, during the early phase of the style, this house is certainly the most exuberant Colonial Revival example in the district. It was designed by Frederick Hill and Stanford White of McKim, Mead, and White, proponents of the popular style. However, the National Register nomination for the property speculates that the outward appearance of the house is due in large part to the builder, John Guthrie Hopkins.¹⁹ The dwelling features a prominent hexastyle portico supported with Ionic columns on the facade, a wide molded entablature, pedimented dormers, and a large Richardsonian-like arched entrance on the rear. The dwelling is constructed of concrete with a native quartz-faced stone veneer. Grand in scale, the “rustic” dwelling incorporates Georgian and Palladian ideals.

Many other less exuberant, but noteworthy, Colonial Revival examples from the early phase (1880-1920) stand within the historic district including New Woodville (1892, 002-0718/002-5045-0691), Oakmont (1900-1904, 002-5045-0062, originally called Isaetta), Coleswood (1901, 002-0788/002-5045-0617), and Maple Hill (circa

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 19

1920, 002-0193/002-5045-1009) to name a few. Woodville, also known as New Woodville, was constructed in 1892, and exhibits the transition between the Queen Anne stylistic period to the Colonial Revival style. The most prevalent Queen Anne elements are the projecting two-story, three-sided bay on the side elevation and the asymmetrical footprint. Although these elements are noted, this residence is overwhelmingly Colonial Revival in style with its symmetrical façade, columned porch, gable dormers, and a Greek Revival-style transom and sidelights (the sidelights and original door have since been removed). Maple Hill stands as another example of a transitional Victorian to Colonial Revival dwelling that also incorporates a projecting, two-story, three-sided bay on the side elevation along with a complex hipped-and-side-gabled roof plan.

Coleswood at 6198 Green Mountain Road portrays the beginnings of the prevalent American foursquare plan in Albemarle County. This wood-frame house, constructed for Peyton Skipwith Coles, is two and a half stories, three bays wide and originally featured a square-shaped footprint. Covering the full width of the façade and partially wrapping around each side elevation is a one-story porch supported with Tuscan columns. The central entry is illuminated with sidelights and an elliptical fanlight and the window above on the second story features similar details. On both the front and rear elevations is a center cross gable with a half-round vent. Typical of early Colonial Revival houses this dwelling is capped with a hipped roof.

Other early foursquare dwellings include The Pillars (1910, 002-5045-1528) with a two-story, three-sided projecting bay on the side elevation similar to New Woodville, and the house at 8232 Scottsville Road (1910 circa, 002-5045-1287), which illustrates the more common appearance of rural foursquare houses. This latter house is three bays wide, features a half-hipped porch across the full width of the façade, hipped dormers on each elevation except for the center cross gable on the rear, and is capped with a hipped roof.

Noteworthy residential examples from the late phase of the Colonial Revival style include Sherwood Farm (1950 circa, 002-5045-1548), Lion's Watch (1941, 002-0819/002-5045-0819), Quiet Entry (002-0421/002-5045-0163), and Fairview (1941, 002-0117/002-5045-1282). A more modern example is Lanark (1961, 002-0483/002-5045-0238), which replaced an earlier dwelling destroyed by fire. The circa 1961 dwelling is said to be the crowning achievement of local architect Benjamin Henderson Heyward.

Fairview is an interpretation of one subtype of the Early Classical Revival style, the tripartite dwelling. The tripartite form features a gabled-front main block flanked by smaller storied wings, which, as discussed earlier, as can be seen in the circa 1800 Mountain Grove. Set in a three-part plan, Fairview features a three-bay center block flanked by three-bay, one-story wings. The slightly projecting end bays on each of the wings are each accentuated with a full pediment and a raking denticulated cornice. Sheltering the central double-leaf entry is a gabled portico with a pediment similar to those on the wings. Lion's Watch, designed by architect Charles Baker, once of McKim, Mead, and White and later a partner with local architect Benjamin Henderson Heyward, represents a more typical high-style late Colonial Revival dwelling and incorporates design influences from a broad geographical range (although the central hall is said to have been designed after Carter's Grove near Williamsburg). Additionally, the district holds two examples of Colonial Revival dwellings by the acclaimed architect Williams Adams Delano. Both Kenwood (circa 1939, 002-0862/002-5045-1209) and Colle (002-

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 20

0159/002-5045-0221) were designed by Delano in the late 1930s. Both houses feature restrained, almost abstract compositions that include little exterior ornamentation, an innovation that is uncharacteristic of the Colonial Revival style in general. The Georgian-influenced Kenwood features severe rectangular massing, a gabled-end entrance with an elaborate swan's neck frontispiece and an enclosed tympanum. Colle is dominated by a low, side-gabled façade with an inset, central entrance and inset dormers. Quoins are found on the exterior corners of the dwelling and flanking the inset entrance. Both Colle and Kenwood each have an octagonal cupola, a feature that serves as a clear trademark which ties both dwellings to each other as well as to their prominent designer.

Numerous modest example of the Colonial Revival style, including Cape Cods and American foursquares, are found sprinkled throughout the district, particularly near Scottsville. Examples include dwellings such as 82 James River Road (1900 circa, 002-5045-1529), 102 Overlook Heights (002-5045-1237), 8045 Scottsville Road (1951, 002-5045-1284), and a two-story, front-gable type at 5526 Serene Road (002-5045-0030). A particularly prominent example of the impact of the Colonial Revival style on suburban streetscapes can be seen just north of Scottsville on Pine Road (including 002-5045-1240 and 002-5045-1244). Despite its frequent use for domestic buildings, the style also lent itself well to religious and institutional buildings such as churches, schools, and municipal buildings, as discussed in the third section.

Craftsman/Bungalow

After the turn of the twentieth century, the application of ornament was largely eschewed and it was theorized that architectural enrichments should be in the effects obtained from the character of the construction methods, materials, and plans. One style that is visible across the Albemarle County landscape that is derived from this school of thought is the Craftsman style. The examples found in the district only hint at their Craftsman high-style models, most often diluted from the style's initial intentions. Typically they feature low-pitched broad roofs, wide eaves, revealed structural elements, such as rafter tails, and the omission of all ornament. The re-invention of the Craftsman bungalow, a form which was originally derived from a type of dwelling associated with colonial India, by architects like Frank Lloyd Wright, brought the availability of progressive interior plans to middle-class Americans. These ideas and plans were transformed by mass-production companies such as Sears, Roebuck and Company and disseminated at affordable prices across the country. Many houses such as Colonial Revival-style foursquares and Craftsman bungalows were packaged, delivered, and built in suburban and rural landscapes and can be identified through historic mail-order company catalogues and plan books.

Popular from around 1905 to just after 1930, the Craftsmen bungalow is typically one of the most popular combinations of style and building form noted throughout Virginia, as it tends to lend itself well to suburban environments. Stylistic elements common to modest Craftsman bungalows include battered wooden posts on brick piers, full-width gabled-front porches, exposed rafter tails, eave brackets, and multi-light windows. Although not overwhelmingly represented in the district, a number of examples are noted, primarily along major thoroughfares and near crossroads communities. One example includes 1612 Scottsville Road (1930 circa, 002-5045-0110) featuring a nearly full-width porch with Craftsman posts, exposed rafters, wide eaves, a large gabled dormer on the façade, and four-over-one sash windows. The dwelling at 4370 Secretary's Road (circa 1924, 002-5045-0946) is similar in form but features a hipped dormer and six-over-six double-hung sashes. The house at

**United States Department of the Interior
National Park Service**

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 21

7892 Blenheim Road (circa 1942, 002-5045-1223) provides another good example of Craftsmen details, again with battered columns and overhanging eaves, but in this example a shed dormer runs the length of the side-gabled façade. A fourth example is found at 8391 Langhorne Road (circa 1930, 002-5045-1477) and has shed dormers, square porch posts, and is a rare example within the district of a twentieth century residential resource constructed in uncoursed field stone. A more high-style example of the bungalow form is found at Isole (circa 1900, 002-5045-0961) on Secretary's Sand Road. This one-and-a-half story stone structure features a clipped gabled-end entrance, hipped dormers on the side elevations and a central interior chimney. An arcaded porch with square posts and paired windows with six-over-six double-hung sashes in the gable further define the façade.

Modern Movement and Subsequent Development after 1955

Buildings scattered throughout the district also date to the second quarter of the twentieth century, primarily reflecting a modern movement era of smaller and more economical housing. Prior to the start of World War II, the country began to embrace a form of the Colonial Revival style that came to be known as the Cape Cod. These dwellings were small rectangular shaped houses three bays wide and one-and-a-half stories in height. The larger initial house forms were quickly transformed and sized down to one story and constructed with cheaper mass-produced materials. Ranch houses and smaller versions sometimes referred to as minimal traditional houses, became the standard of contemporary housing during the 1950s, 1960s, and extending through the early 1970s. Southern Albemarle exhibits an increase in building construction beginning in 1940 and extending through the last half of the twentieth century. Many of these houses are one story in height, three bays wide, wood-frame construction capped with side-gabled roofs and typically lack any ornament or porches. They sometimes feature an entry portico or an inset garage, reflecting a national trend beginning in the 1950s and 1960s to incorporate garages within a dwelling's overall plan. While integrated garages continue to the present, the most recent building trends tend to separate the garage with a hyphen or a gable or place it on the side of the dwelling. At 5121 Green Creek Road (002-5045-0914) and 237 Coles Rolling Road (circa 1940, 002-5045-1017) are two examples of Cape Cod dwellings in the district, while additional examples are noted in small areas on the outskirts of Scottsville.

Other modern movement resources include dwellings built in the ranch form. Ranches, typified by low, side-gabled, occasionally sprawling, one-story masonry designs, reflect a slight suburban influence on the rural district in the mid-twentieth century. By no means widespread, the form is typically found on small parcels located near roads. Typically featuring a minimal amount of modern movement ornamentation, such as plate glass windows and veneered entrance doors, the designs are often examples of post-war suburbia. Colonial Revival-style characteristics, such as six-over-six double-hung wood-sash windows, molded trim, and columned porches, are the most typical of those detailed with stylistic features. Most of the ranch dwellings in the district date from the 1950s to the 1980s. Representative examples of the ranch form in the district can be seen at 377 Glendower Road (1980, 002-5045-1036) and at 1178 Thomas Jefferson Parkway (1955, 002-5045-1079).

Similar to the historic trends for domestic dwellings in the district, recent (post-1970) housing trends have been divided between a relatively small number of immense structures and a modest amount of middle-class houses. Other examples are primarily associated with basic, low-cost housing forms, including prefabricated modular

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 22

homes and trailers. There are a few examples of large modern dwellings with forms and ornamentation that may one day coalesce into a recognizable transitional style. They include the dwellings at 2887 James River Road (circa 1985; 002-5045-0536) located on a bluff overlooking the James River, and 7640 Langhorne Road (circa 2000; 002-5045-1080), as well as Albemarle House (circa 1990; 002-5045-1569), a Neo-Georgian mansion, which was constructed by billionaire John Kluge. In spite of these large modern mansions, the more typical modern trend has been the renovation or restoration of historic high-style structures. Examples of this trend can be seen at Esmont (restored in 2001) River Lawn (renovated in 2005), Locust Hill (presently being restored), and Guthrie Hall (currently under renovation), among others.

The contemporary middle-class dwellings again reflect nationally widespread suburban forms. Often two stories in height with a side-gabled roof and Colonial Revival-inspired detailing, these buildings reflect a building type that was built ubiquitously throughout the United States in the last quarter of the twentieth century and the early 21st century. Some of these modern dwellings also draw inspiration from earlier decades, including the Cape Cod and I-house forms. Other examples feature rustic detailing, including log posts and cedar siding. While most of these contemporary structures include a garage and/or a shed, they do not typically feature many other outbuildings. Rustic examples are seen at 4414 Old Sand Road (1990, 002-5045-0944) and 9835 Old Green Mountain Road (002-5045-0861). The modern interpretation of the Colonial Revival style is represented at 295 Glendower Road (circa 2000, 002-5045-1041) and 5161 Green Creek Road (circa 1995, 002-5045-0916). The dwellings at 445 Glendower Road (1990, 002-5045-1032) and 337 Glendower Road (2000, 002-5045-1039) are each one-and-a-half stories in height with side-gabled roofs, columned porches, Colonial Revival-style trim, and gabled dormers, recalling the Cape Cod form. The circa 2000 dwelling at 225 Glendower Road (002-5045-1044) is a two-story, three-bay dwelling with a central entry and side-gabled roof. The dwelling features the I-house form and includes a one-story half-hipped-roof porch with turned posts. Other more vernacular middle-class dwellings are located throughout the district as well, some architect designed. Examples of the type include 9131 Old Green Mountain Road (circa 1980, 002-5045-0870) and 3001 Old Dominion Road (circa 1980, 002-5045-0913).

The other modern house form located in the district is the middle to moderate-income dwelling. Examples of the small, fairly unadorned house type includes the circa 2000 side-gabled dwelling at 357 Glendower Road (002-5045-1038). The one-story side-gabled wood-frame dwelling features an asphalt-shingle roof and vinyl siding. A gabled porch is detailed with turned posts, but no other decorative trim is present. Other similar examples are located at 7860 Blenheim Road (1980, 002-5045-1221) and 9990 Chestnut Grove Road (1990, 002-5045-0858). A more modest house type is the prefabricated house or trailer; both are located on small rural parcels throughout the district.

VERNACULAR RESIDENTIAL RESOURCES

A vast number of vernacular residential resources are found throughout the district encompassing types that are distinguished either for their association with a certain race (specifically African-American or white), profession or status, or building type. The building types discussed below include eighteenth century single-cell houses, log

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 23

houses, and I-houses. The only resources discussed that are associated with a specific race include ones within the district's historic African-American communities. Houses associated with a particular profession or status include mill houses, slave quarters, and company-built houses.

Eighteenth Century Houses: 1-room

Solitude (circa 1791, 002-0571/002-5045-0172), a notable vernacular dwelling from the late eighteenth century, is a timber-frame house located at the base of Carter's Mountain near the Hardware River. It appears to have been built around 1790 as a single-room house, which was once a relatively common but now very rare building type in Virginia. It was expanded to its present five-room plan by about 1830. Resting on a solid random-rubble foundation, it is capped with a side-gabled, corrugated-metal roof and the walls are clad with weatherboard siding. The facade is three bays wide with one four-over-four wood-sash window and two single-leaf, vertical-board doors. The two exterior-end brick chimneys are constructed in seven- and eight-course American bond. Another, more intact one-room dwelling can be seen at the circa 1796 claim house or early dwelling at Morven (002-0054/002-5045-0166). This small, one-story, frame dwelling with an exterior, gabled-end chimney features a two-bay façade with an off-center shed porch and flanking shed-roof additions.

The single cell, early-nineteenth-century fieldstone dwelling at Tufton (002-0077/002-5045-0213) is also a minor vernacular form in the district. The off-center gabled-end entry, asymmetrical fenestration and gabled-end chimney mark this as a relatively late example of a building type that would have been more prominent in the mid-eighteenth century. A similarly sized, circa 1800 one-room fieldstone building (currently referred to as a cobbler's shop) at Morven (002-0054/002-5045-0166) is another example of the type, although it features an off-center, side-gabled entrance.

Hall-Parlor Houses

One of the most common forms of vernacular housing found in the region during the eighteenth and early nineteenth centuries is the two-room, single-pile, one to one-and-a-half story, side-gabled dwelling. Commonly known as a hall-parlor or hall-chamber plan after the uses of its two first-floor spaces, these houses feature a hall that served as a work and everyday living space and an often smaller parlor (or chamber) that was used both as a sleeping space and as the center of formal entertaining. Other typical features include a side-gabled roof and exterior-end chimneys. Earlier examples from the mid-eighteenth century often featured asymmetrical facades while later examples adopted the symmetry that had come to dominate the region's gentry housing. While the exterior has been covered with aluminum siding and the original fenestration has been replaced with aluminum windows, 7604 Secretary's Road (circa 1820, 002-5045-0949) survives as a good example of a later, symmetrically designed, hall-parlor dwelling. The building, with exposed gable plate (or tie beam) ends indicating that it is constructed of squared logs, has four bays across the front and one exterior-end, shouldered, fieldstone chimney (now stuccoed) and a facing exterior-end brick chimney.

Log Dwellings

An important vernacular housing type from the eighteenth and nineteenth centuries is found in the handful of log dwellings scattered throughout the district such as 6980 Green Creek Lane (1780 circa, 002-5045-0082), Leather House (1780 circa, 002-0412/002-5045-0502), the addition at Lennox (1780 circa, 002-5045-0636), and the

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 24

house at 4509 Blenheim Ridge Road (1860 circa, 002-5045-1205). It was common practice to side a log house at the outset of construction and this has made it difficult for architectural historians to identify log dwellings that do not exhibit prevailing clues. These clues include deeply inset doors and windows, a shortened upper story for some two-story houses (full-height two-story log houses were not commonly built because of the structural inability to support such weight), or a greater distance between the eaves and windows in a one-story house compared to other types. Log outbuildings also exist throughout the district, including at Lanark, Monticola, and Tufton, among others.

An excellent representative example of a well-preserved log house from the eighteenth century is the Leathers House located off Scottsville Road. This house was built on a 550-acre tract of land that was patented in 1734 to Thomas Sowell. hall-parlor log dwelling was built during the late eighteenth- or early-nineteenth century by Sowell's son John or grandson Benjamin. It was acquired in 1853 by Jonathan Leathers, who married Benjamin Sowell's daughter. One-and-a-half stories in height and two bays wide on the façade, this dwelling is clad with weatherboard siding, features two exterior-end shouldered stone chimneys, three gabled dormers, and a side-gabled roof. During the late nineteenth century, a rounded bargeboard was applied to the eaves.

Single-Pile, Central Passage Dwellings

Central passage dwellings are common throughout the district. Differing from their larger, double-pile cousins, these buildings are often less ornamented and were often built as dwellings for the district's middle-class small farmers and tradesmen. Common elements include a three-bay façade, center entries and exterior or interior end chimneys. The two variations seen in the district are the one- to one-and-a-half story central passage house and the two-story, central passage house, which is more commonly referred to as an I-house.

One- to One-and-a-Half Story Central Passage Dwellings

While not found extensively throughout the district, these structures, with a symmetrical façade and central, gabled-side entry, represent a common housing form in the late-eighteenth and early-nineteenth centuries. Smaller, three-bay examples are found at 5483 Green Creek Road (circa 1820, 002-5045-0918) and at the Dyer's Mill Manager's house (circa 1790, 002-0166/002-5045-1277). Each of these wood frame dwellings features a small one-bay wide gabled porch and sits on a full English basement. An unusual example, Locust Hill (circa 1760, 002-0583/002-5045-0533), constructed for Matthew Jourden near Howardsville, is a larger, more ornate five-bay instance of the subtype which features more ornamental detailing and a distinctive hip-in-gambrel roof, the only example from this period in Albemarle County.

I-houses

Popularity of the I-house form in Virginia began during the early nineteenth century and lasted through the turn of the twentieth century. Revivals of the form can even be seen in modern construction. The typical I-house is two stories in height, two rooms wide with a central passage, and is one room deep. I-houses are almost always three bays wide on the façade, however, variants include five- and seven-bay versions. This form is dominated by wood-frame construction in central Virginia due to the availability of the raw material. I-houses that date prior to the advent and popularity of the railroad (1830-1850 circa) commonly lack embellishment, with more

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 25

lavish applied ornament used after its arrival. Early I-houses typically vary from one to another by only a few architectural elements such as the location and number of chimneys, type of porch, and addition of an ell or kitchen wing. One example of this type is found at 2041 Milton Road (circa 1850, 002-5045-0187). Greek Revival-style detailing is also common on I-houses in the region. The Mehring House at Colle (002-0477/002-5045-0222), with its square transom and side lights surrounding the front door is representative of a typical Greek Revival influenced I-house. The Rectory (002-1831/002-5045-0638), constructed circa 1848 near Plain Dealing, is another typical I-house dwelling that was stylistically improved with Greek Revival detailing. The two-story wood frame dwelling features a symmetrically fenestrated three-bay façade with a dominant one-story gabled portico. The Greek Revival style portico features a closed tympanum and large, paired, square posts.

The Gothic Revival style added exuberance to the vernacular I-house form with the application of a steeply pitched center cross gable; however, in this district the center gables are not always steeply pitched. Examples of these forms can be seen at 5175 Alberene Road (1850 circa, 002-0204-0002), 5886 Alberene Road (1880 circa, 002-5045-0060), 5120 Irish Road (circa 1880, 002-5045-0920), in the log dwelling at Quandry Farm (circa 1860, 002-5045-0283), and the dwelling at 2908 Precinct Road (1870 circa, 002-5045-0795). The dwelling at 2390 James River Road (1880 circa, 002-5045-0852) is unusual due to its projecting center-gabled bay, while the dwelling at 7783 Blenheim Road (circa 1900, 002-5045-1217) features a relatively rare five-bay façade. The dwellings at 5228 Secretary's Sand Road (circa 1890, 002-5045-0968) and 6100 Blenheim Road (1775/1850 circa, 002-5045-1191) are also examples of the Gothic Revival gable added to an I-house, although numerous other examples exist throughout the district.

I-houses constructed during the last quarter of the nineteenth century often have more applied ornament compared to earlier examples. Ornamentation includes decorative porches common to the Queen Anne style (turned posts, lace-like porch brackets, spindle work) or elements such as scroll-sawn eave brackets and hooded windows common to the Italianate style. An example is the house at 3180 Rhodes Lane (1900 ca, 002-5045-0066), which features a Queen Anne-style porch. While this ornamentation was commonplace throughout the United States, the Gothic Revival and Queen Anne updates are not widespread throughout the district. The I-house form continued into the twentieth century and the later examples often revert to the simplified ornamentation found on the pre-1850 examples. One exception is the use of applied Colonial Revival details, such as columns for porch supports.

African-American Houses/Settlement Patterns

Beginning in the early 1870s, African Americans, who had been freed as a consequence of the Civil War, began to own land and develop communities in Albemarle County. In the region, black communities tended to develop through small cohesive groups that created close-knit communities and hamlets, sometimes set away from view of white residents and travelers. Several African-American communities exist in the district and exhibit two different community types: a clustered community set off to itself or a linear community that is located along travel corridors used by both whites and blacks. The communities and hamlets in the Southern Albemarle Historic District include Rose Hill, Chestnut Grove, Porters, Blenheim, and Slate Hill. Carter's bridge also featured a similar community with a church.

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 26

The community of Rose Hill is an example of a cohesive community set apart from the general population. It is accessed by Rose Hill Church Lane, a dead-end road that extends off Milton Road near Tufton (which was where the village's original inhabitants lived prior to emancipation). It is not know if the location of Rose Hill relates to the site of anti-bellum out-quarters and more research is needed to determine the communities use prior to emancipation. Rose Hill is set away from all travel corridors and the buildings are clustered together on a few wooded acres. Historically, the school and a church and cemetery standing at the end of the road have traditionally been the core buildings of the small rural hamlet.

The area of Chestnut Grove combines a linear development with several residential clusters sited off the main connecting road. The African-American community of Chestnut Grove is quite large, essentially spreading itself along Chestnut Grove Road for approximately four miles (beginning near Irish Road (Rt. 6) and ending just after Chestnut Grove Baptist Church). Scattered along Chestnut Grove Road are numerous African-American dwellings and one commercial building (1893, 002-1592/002-5045-1360), many of which are not historic, with several side roads featuring clusters of African-American dwellings. Several of these clusters give the outward appearance of family compounds. One such example can be seen with the numerous Starks family houses located at the end of Pocket Lane. The oldest of the African-American houses along Pocket Lane is a circa 1940 house built approximately forty years after the land was originally bought by Flora Rush, a member of the Stark family.

The documentation of each of the African-American communities shows that very few residential resources in these areas date to the nineteenth and early twentieth centuries. The majority of them are non-historic structures. The houses in Chestnut Grove are all wood-frame construction and are one story in height; however, what makes them particularly interesting is the use of a single form among several of the historic structures. These dwellings are single-pile, three bays wide with a center cross gable, and in most cases a portico shelters the central entry. In addition, each house has a gabled ell centrally placed on the rear elevation. Examples of this house form are located at 8659 Chestnut Grove Road (1940 circa, 002-5045-1404), 8699 Chestnut Grove Road (1940 circa, 002-5045-1405), and 3962 Gaines Lane (1940 circa, 002-5045-1406). With their rear ells and center cross gables these houses set themselves apart from the more common contemporary Cape Cod houses of the time.

Interestingly, the common building form found in Chestnut Grove is also found in the African-American community of Rose Hill. Very few houses in Rose Hill date prior to the 1960s, however, the house at 2289 Rose Hill Church Lane (002-5045-0211) stands out and dates to around 1920. Reflecting a similar form as seen in Chestnut Grove, this house is one-story in height, three bays wide, and features a center cross gable. Differing from the forms in Chestnut Grove, this house is lacking a rear ell.

Mill Houses

The abundance of available water sources throughout Albemarle County brought a large milling industry to the area. Consisting primarily of gristmills, the district also featured a less abundant collection of woolen and saw mills. It was common practice for the miller to live in close proximity of the mill as can be seen in several

**United States Department of the Interior
National Park Service****NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET****Southern Albemarle Rural Historic District
Albemarle County, VA**Section 7 Page 27

examples in the district. Notably, a few vernacular mill houses from the eighteenth and nineteenth centuries remain in the district: Dyer's Mill house near Keene (1787, 002-0166/002-5045-1277), Cocke's Mill House/Tsuquatantia (1792, 002-0186/002-5045-0061), and Eolus' Mill house at 409 Secretary's Road near Carter's Bridge (1837 circa, 002-5045-1544). Dyer's Mill house is an excellent example of a late-eighteenth century vernacular house set in a rectangular-shaped footprint and standing one-and-a-half stories in height with a three-bay façade. It contains a central entry flanked by six-over-six double-hung windows. Resting on a raised stretcher-bond brick foundation, this weatherboard-clad house contains a panel-and-light wood door illuminated with a five-light transom typical of the Georgian period. Rising above the side-gabled roof are two exterior-end, shouldered brick chimneys with corbeled caps. With a similar shape, Eolus' Mill house is one story in height and three bays wide with a central entry. It is capped with a side-gabled roof and features an exterior-end shouldered brick chimney.

Company Workers' Housing and Farm Tenant Structures

One of the more significant companies in southern Albemarle County was the Alberene Soapstone Company located in Alberene in the western portion of the county. While several other companies were actively quarrying soapstone at the beginning of the twentieth century, Alberene Soapstone Company, later moved to Schuyler in neighboring Nelson County, was by far the largest and it eventually bought out all of the rival companies in the county. The development of the town of Alberene is centered solely on the prosperity of the soapstone company and the quarries located there. Beginning around 1885 the company had a large number of workers' houses constructed to support its large workforce. The company used several different house forms in each of their company towns such as the one in Alberene and another in Schuyler. One dominant house form in Alberene is comprised of two side-gabled blocks perpendicular to one another. The façade features a two-story, gabled-front block attached to a one-story, side-gabled section, which contains the entry sheltered by a shed-roof porch. The gabled-front block may or may not be pierced by windows on both stories and there are no entries into this block on the façade or side elevation. Built circa 1885, examples of this type are exhibited at 5215 Quality Row (002-5045-0004) and 5003 Alberene Road (002-5045-0010) among numerous others. A variant of this type is also composed of two blocks of differing height; however, the entry is located in the front-gabled section as seen at 5530 Stumptown Lane (1920, 002-5045-0038). For approximately thirty-five years these two house types were used by the Alberene Soapstone Company beginning in 1885. A third variant of this same two-block form is one in which both blocks are two stories in height and the entry is in the side-gabled section. An example is sited at 5508 Serene Road (002-5045-0028) built around 1920. Alberene boasts a fourth company house type: the single-block, two-story, gabled-front house as exhibited at 5466 Serene Road (1900 circa, 002-5045-0026). Finally, a one-room, two-story dwelling was also built to house workers for the Alberene Soapstone Company. The small, wood frame dwelling with a two-bay, side-gabled façade typifies the smallest, least distinguished form of soapstone workers house. The dwelling at 7547 Secretary's Sand Road (circa 1900, 00-2-5045-0951) typifies the type; 4367 Old Sand Road (circa 1910, 002-5045-0945) is also representative of this type, although an additional one-room, two-story block has been added to the side of the structure.

Agricultural workers' or tenants' cottages are also prevalent throughout the district, revealing the importance of hired farm workers and farm managers. Typically small, unadorned wood-frame cottages or I-houses, the

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 28

dwellings range from one to two stories in height, often dating to the late nineteenth or early twentieth centuries. The building type is widespread, especially on the larger farms that often feature more than one tenant house and examples are located at Estouteville, Milton Farm, Lanark, Fairview, Bellair, Maple Hill, Morven, Redlands, and Plain Dealing to name a few. The double-celled wood-frame tenant house at Mount Warren (002-0239/002-5045-1046) is an interesting example as it is detailed with decorative scallop-edged vergeboard. It appears to have been before the Civil War used as housing for a domestic slave, who remained on the plantation after the war ended. One of the worker houses at Plain Dealing, a vernacular I-house, was purchased by Theodore Roosevelt in 1905 with approximately 15 acres and converted into the rural retreat known as Pine Knot. Roosevelt added to the basic I-house structure a low full-width porch supported by rustic log posts and stone chimneys, and made significant changes to the interior. Even though the family never visited the property after 1908, Edith Roosevelt maintained possession of Pine Knot until 1941.²⁰

Other Vernacular Building Forms

Lacking any embellishment, the vernacular house at 5759 Alberene Road (002-5045-0055) is quite an extraordinary form due to the unusual location of the exterior chimney flue. Built towards the end of the nineteenth century, this house form is a simple two-story, three-bay building capped with a side-gabled roof. The large random rubble chimney is prominently placed on the façade just slightly off center between the entry and the end bay. Interestingly, it pierces the half-hipped roof porch that covers the full-width of the first story.

The dwelling at 4659 Old Sand Road (circa 1910, 002-5045-0931) is an example of a small, two-room, two-story, wood-framed building that has a lack of symmetrical fenestration and an off-center interior end chimney. The house is distinguished by an off-center, non-projecting gable that appears to be a simplified form of a cross-gabled roofline seen commonly among the workers' housing associated with the Alberene Soapstone Company, including 5215 Quality Row (002-5045-0004).

NON-RESIDENTIAL RESOURCES

A wide variety of non-residential resources is found throughout the district, reflecting its long history of diverse economic activity. The categories typically used for these buildings and structures include agricultural, educational, commercial, ecclesiastical, industrial, and social. In addition, a number of sites were documented in the district including quarries and cemeteries. The noteworthy landscapes and viewsheds throughout the district are also important resources, and as such are also prominent factors in the significance of the Southern Albemarle Rural Historic District.

Agricultural & Residential Support Structures

The most abundant non-residential resource types are agricultural structures. Due to the prominence of agriculture as the dominant economic force throughout the southern and eastern portion of Albemarle County, these buildings help to define the district's landscape. Southern Albemarle County still maintains many of the

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 29

same farms that began during the eighteenth, nineteenth and early twentieth centuries with agricultural resources sharing a similar date range.

The agricultural pursuits in the district today are centered around a few key crops and types of livestock, including cattle and horses, and crops such as hay, grapes, corn, apples, peaches, and soybeans. Interestingly, the crops and livestock currently found in the district is similar to that of earlier centuries, as relayed in the advertisements in the *Virginia Gazette*. Between 1765 and 1775, the gazetteer lists tobacco, peach orchards, apple orchards, wheat, and corn as the primary crops and cattle and hogs the most common livestock.²¹ While tobacco has disappeared from the district, today vineyards, pastures, cattle farms, and horse farms make up the majority of the cultivated and pastured farm land. However, today's agricultural pursuits are largely focused on livestock and not on tobacco cultivation. While agriculture is not the prime base of the current economy, the vast rural landscape remains intact. An extraordinary number of agricultural buildings stand in the district supporting the present agricultural practices, while others remain as reminders of the district's prominent agricultural past.

Barns

According to *The Architecture of Jefferson Country*, two barn types were predominant in Albemarle County: English ground barns and Germanic bank barns. Interestingly, bank barns are a rarity throughout the district with only five documented. They are located at Estouteville (1827, 002-0032/002-5045-0598), Maple Hill (circa 1920, 002-0193/002-5045-1009), Donegal (002-0241/002-5045-1098), Lion's Watch (002-0819/002-5045-1506) and Oakmont (002-5045-0062). The barn at Donegal appears to date to the mid-to-late nineteenth century. This barn is of wood-frame construction with a random-rubble foundation, stands two-and-a-half stories in height, is four bays wide on the gable end, and is entirely one story on the upslope side elevation. Because of the level ground on this side there is no built-up drive into the barn, a common design for bank barns. Clad with weatherboards, it features a gabled cupola with louvered vents atop a slate-shingle roof. The barns at Lion's Watch and Oakmont are similar to the one at Donegal, with a one-story side elevation with no built-up drive into the barn, with the upper floor opening directly at ground level. The additionally, the barn at Lion's Watch appears to have been constructed circa 1930. This barn sits on a concrete-block foundation, has several stalls on the lower level, and features an attached metal stave silo. Smaller in size than the other two barns, the bank barn at Oakmont dates to approximately 1920 and is clad with board-and-batten siding and sits on a poured concrete foundation. The wood-framed, gambrel-roofed barn at Maple Hill features sliding, double-leaf, central barn doors, clapboard siding and a gabled-roof, wood-frame, central ventilator.

Ubiquitous throughout the Southern Albemarle Rural Historic District are wood-frame ground barns topped with gabled roofs. A variety of sizes exists in the district and most date between the mid-nineteenth century to the twenty-first century. Historic barns are clad with weatherboards, vertical-board or board-and-batten siding, contain glazed windows, and commonly feature wood-frame cupolas. Cupolas are noted at Dawson's Mill/Cool Springs barn (002-0435/002-5045-0851), while several others are also noted in the district. For barns without cupolas other forms of ventilation were used such as gabled-end vents or eave vents (which are placed along the length of the barn). The barn at Lone Oak (1920 circa, 002-5045-1060) uses eave vents in the form of bays and the large cattle barn at Donegal exhibits running vents along the eaves. The large livestock and hay barns are two

**United States Department of the Interior
National Park Service**

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 30

or two-and-a-half stories in height and have hay storage in the second floor loft. A large number of barns in the area feature hay hoods on one gabled end. Hay hoods set a pulley system immediately outside the loft and provide an easy way to lift hay into the loft. A few examples of barns with hay hoods can be found at Viewmont (002-0080/002-5045-0578), the barn at the corner of Alberene Road and Stumptown Road (002-5045-0020), Hatton Grange (002-0105/002-5045-1439), Church Hill Farm (002-5045-1007), Keelona (002-0487/002-5045-0625), Blenheim (002-0005/002-5045-0239), and Redbrooke (002-1569/002-5045-1556), among others. While the cinderblock, circa 1950 barn at Bellair (002-0002/002-5045-1211) does not include a hay hood, the hay grapple and grapple track are still visible from the exterior. It is interesting to note that horse-powered threshing machines were housed in barns at Redlands and at Sherwood Farm.²²

Large-scale commercial dairying had its beginning at the end of the nineteenth century and grew considerably throughout the first half of the twentieth century. However, dairying did not become prominent in Albemarle County during this time. According to a 1924 density map of dairy cows in Virginia most of the dairy farms were located in the north and northeastern sections of the state. This 1924 survey determined there were approximately 420 dairy cows in Albemarle County, compared to Orange County, a smaller neighboring county to the northeast, with approximately twelve hundred dairy cows.²³ A possible reason for the difference is the fact that Orange County is closer geographically to the cities of Washington, DC, Culpeper and Fredericksburg, allowing for the perishable dairy products to be delivered more quickly.

Beginning in 1908, the United States Department of Agriculture (USDA) published a brief circular on recommendations for sanitary dairy barn design. It was not until 1923 that the USDA published a more comprehensive circular that established the necessary elements in dairy barn construction, such as wall and floor materials, roof type, ventilation system, windows, use and placement of milk houses, and use of silos.

Only a few dairy barns are located in the southern portion of the county. One unusual example in the district is located on Milton Farm (002-1617/002-5045-0188) just south of the Rivanna River in Milton. A rarity in the region, this barn, built circa 1910, is one story in height where two-story barns were much more common. Because of its height a separate building to hold hay was necessary, which is attached at the southwest end of the dairy barn. Where two-story gambrel roof barns were much more commonly used as dairy barns in the area, one of the identifying factors for this barn are the fourteen six-light casement windows on both side elevations. The windows typically mark each milking stanchion on the interior. Because of the weatherboard cladding, the one-story height, and lack of rooftop ventilators, this building is noted as one of the district's earlier twentieth-century dairy barns. A concrete block milkhouse appears to have been added circa 1940. Following standard milkhouse designs, this building is attached with a breezeway to the dairy barn, is constructed of concrete blocks, has a concrete floor, a side-gabled roof, and is well ventilated. Another early twentieth-century dairy barn complex can be found at 237 Coles Rolling Road (002-5045-1017). This collection of wood-framed buildings includes a large dairy barn, a hay barn, a granary and a smaller barn that may have also been used to house livestock.

A more typical early twentieth-century dairy barn in the district is the circa 1920 barn at Canaan (002-0444/002-5045-1070). This barn is two stories in height, sits on a poured concrete floor, is clad with weatherboard siding,

**United States Department of the Interior
National Park Service**

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 31

contains nine-light casement windows, and is capped with a gambrel roof. Unlike the barn at Milton Farm, this dairy barn is ventilated with three shed dormers on the side elevations and two cupolas with metal vents. Not attached but located nearby is a cylindrical concrete-stave silo. The dairying complex at Fairview (002-0117/002-5045-1282) typifies later, mid-twentieth-century dairy barns and the growing number of sanitation regulations that affected the evolution of dairy barns throughout the twentieth century. The complex features a cinder-block dairy barn and a separate cinder-block milking parlor, characterizing the well-lit, masonry structures built to conform to the new regulations. Additionally, the large barn at Fairview features two, two-story gabled-roof hyphens on the western gambrel side connecting to two circa 1925 dome-roofed, clay-tile silos.

Barns built specifically for feeding cattle can be seen throughout the district and represent the district's shift to focus on raising beef cattle in the mid-twentieth century. The gabled-roof barns are often simple, two-story structures with shed-roofed wings. Primarily covered with vertical board siding with multiple gabled-end openings, these structures feature central aisle plans that are flanked by feeding stations held in the shed roof wings. An intact example can be seen at Bellair (002-0002/002-5045-1211).

Tobacco cultivation was an important economic practice in Albemarle County, however, historic tobacco barns are a rarity on the landscape. Wolftrap Farm at 7814 Chestnut Grove Road (002-5045-1353) is home to one of these rare resources. Typical of tobacco barns, this is a tall structure with no windows, a gabled roof, and vertical board cladding. It is difficult to identify as a tobacco barn with the addition of one story stalls around its perimeter adapting the building as a stable.

Stabling for horses is also a widespread outbuilding type in the district. While few pre-Industrial Revolution stables remain, many dating from the 1880s into the late-twentieth century survive. The most developed of the pre-1900 stables in the district are related to the influx of outside capital in the decades after the Civil War. The largest example is found at Nydris (002-0352/002-5045-1482), a large late-nineteenth-century estate built by the New Orleans sugar and banking magnet Harry Douglas Forsyth. Designed by Richmond architect D. Wiley Anderson, Nydris stable is said to have been "one of the largest and most elaborate" horse stables in Virginia.²⁴ This complex brick building ranges in height from one to two stories and originally featured a U-shaped footprint which has since been closed off with an addition. Designed in a modest late Victorian style, this structure features several interior chimneys, gabled-end vents, segmental-arched window lintels, a large vented cupola, a steeply pitched projecting center gable, and arched entryways into the courtyard. Other notable nineteenth-century and early twentieth-century stables in the district are present at Ellerslie and Donegal.

More common in the historic district are later stabling complexes, dating to the early- to mid- twentieth century. Good examples can be found at Plain Dealing (002-0065/002-5045-0637), Morven (002-0054/002-5045-0166) and Canaan/Liberty Corner (002-0444/002-5045-1070). While these complexes have continued to evolve into the late twentieth century, their cores still remain indicative of the early- to mid-twentieth-century show and race horse breeding practices that were popular in the district. Related to the stables, two large, late-nineteenth-century carriage barns in the district further exemplify the important role that horses have played. These include the barns at Estouteville (002-0032/002-5045-0598) and Maple Hill (002-0193/002-5045-1009).

Section 7 Page 32

Slave Quarters

Slave ownership was quite common throughout Albemarle County during the first half of the nineteenth century. The large plantations of the early nineteenth century were worked by African-American slaves, whom typically resided on the plantation. Few slave quarters remain extant in Albemarle County, mostly because their use was no longer necessary after emancipation, and a majority of them were of wood-frame or log construction, which quickly fell into disrepair if not maintained. Many of the slave quarters that do remain are located to the rear of the main house and vary between log, timber-frame, or brick construction. These include slave quarters at Blenheim (002-0005/002-5045-0239), Belle Gate/Hampstead (002-0024/002-5045-1486), Bellair (002-0002/002-5045-1211), Sunnyfields (circa 1840, 002-0480/002-5045-0980, Plain Dealing (002-0065/002-5045-0637), Redlands (002-0067/002-5045-1488), Roundtop (002-0070/002-5045-0515), Canaan (002-0444/002-5045-1070), and Lennox (002-5045-0636). Moreover, these buildings were also typically multi-use structures combining either the kitchen and/or laundry on the first floor with one or two rooms above as living quarters. After the Civil War, many of the more substantial quarters were converted to tenant houses. Brick kitchens/slave quarters are found at Glendower (002-0040/002-5045-1278), Hatton Grange (002-0105/002-5045-1439), Auburn Hill (002-0118), Estouteville (002-0032/002-5045-0598) and Sherwood (002-5045-1548). The brick structures are much larger than the wood structures and typically rise two stories in height, whereas the wood frame structures are usually found to be one-and-a-half stories in height. All extant slave quarters have been converted into other uses typically as tenant houses, offices, or storage buildings. In addition to slave quarters, several tenant cottages are observed which appear to pre-date the Civil War or date from just after.

One largely unaltered wood-frame slave quarters/kitchen is located at Blenheim (002-0005/002-5045-0239) and dates to around 1846, contemporary with the main house. This unusual structure is square-shaped and features entries in both the front and rear elevations (a common characteristic for detached kitchens). This building is unusual for its Gothic Revival detailing of steeply-pitched central cross gables on both the front and rear elevations. The first floor is divided into two distinct areas: one space was for cooking and the second was possibly for food preparation.

Smokehouses

Numerous historic smokehouses remain in the district, having been adapted as storage buildings. Smokehouses in the county are usually wood-frame construction and are typically capped with a pyramidal roof or, less commonly, a gabled roof. Examples of wood-frame smokehouses are found at Redlands, Glendower, Old Woodville, Donegal, Sherwood, Plain Dealing, Dawson's Mill, and Canaan to name a few. Less common in Virginia are masonry smokehouses, which are particularly rare in the district with only three examples, found at Estouteville, Esmont Farm, and Hatton Grange.

Root Cellars

Root cellars and dairies are other food storage building types found on both large and small farms in southern Albemarle County. Only a few historic root cellars are documented in the district, including those located at New Woodville, Bell Gate, and 3888 Rolling Road (002-5045-0546). All of these structures are constructed of

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 33

random rubble, situated low to the ground, and have front-gabled roofs.

Dairies

Historic dairies, which were typically wood-frame or masonry structures fitted with shelves, sometimes feature a sunken floor and have interiors commonly finished with plaster or whitewash. Many dairies have a shape similar to a smokehouse: however, dairies are distinguishable by extended eaves and louvered vents below the eaves or window bays. The wide eaves, vents, and windows allow the interior to remain cool, crucial in storing dairy products. Cool storage was provided by the use of troughs that held milk containers cooled with spring water. Brick-constructed dairies are the most common form with well preserved examples found at Esmont Farm (002-0030/002-5045-1380), Hatton Grange (002-0105/002-5045-1430), Estouteville (002-0032/002-5045-0598) and Michie Tavern (002-0093/002-5045-1047). Wood-frame examples in the district are located at Redlands (002-0067/002-5045-1488) and 4797 Esmont Road (002-5045-0461). The latter one is a representative example of a small dairy that served a single household instead of a large farm such as Redlands, Estouteville, or Hatton Grange. Unlike the other dairies which are capped with pyramidal roofs, this dairy is wood-frame with a front-gabled roof that has an extensive front overhang. It is pierced with windows on both sides and features a ground-level trough on the interior.

Icehouses, Wells, and Spring/Pump Houses

Historically, ice and water for farms were provided by ice ponds, ice houses, springhouses, wells, manual water pumps, and water-pumping windmills. There are seven extant ice houses in the district, including a brick structure at Sherwood (circa 1835) and a stone icehouse at Bell Gate (circa 1800). Both structures are round with the characteristic conical roof. Additionally a ruinous round, brick icehouse is found at Estouteville and a reconstructed round icehouse can be seen at Monticello. Monticola features a wood-frame icehouse set on a random-rubblestone foundation. A front-gabled icehouse was also known to exist at Dawson's Mill/Cool Springs.

A springhouse at Woodlawn (002-0060/002-5045-0139) and another along Esmont Road (002-0427/002-5045-1481) immediately west of Esmont Farm were documented in the district; however, it is possible there may be several more that were not visible at the time of the survey.²⁵ Although covered with slabs of concrete, the fieldstone well at New Woodville (002-0718) is the best preserved well and pulley system in the district. Three other good examples of wells in the district include one at 7468 Jefferson Mill Road (002-5045-1158), Greenmont Farm (002-5045-0614), and Bell Gate/Hampstead (002-0024/002-5045-1486). The Greenmont Farm well is in filled and features raised poured concrete walls and a mostly dismantled pulley system. The in-filled well at Bell Gate has parged random rubble walls that are set low to the ground. A few manual water pumps are also found in the district with the best historic example at Blenheim (002-0005), which has a rare wood-covered pipe system that once produced the water onto a surviving sloping trough. A community well with hand pump was noted in the neighborhood of Damon. Additionally, more modern well houses can be seen in the district. A circa 1940 Colonial Revival well house (which could date to the circa 1967 renovations to the property undertaken by local renovation architect Floyd Johnson) can be seen beside the main house at Bellair (002-0002/002-5045-1211). This open-sided, timber frame, pyramidal-roofed structure with a concrete faux-shake

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 34

roof shelters a framed well cap that is covered with beaded planks. A similar Colonial Revival well house stands at the Dyer's Mill House, the long-time residence of regionally significant restoration architect Floyd E. Johnson (1909-1994). Almost identical to the Bellair example, this mid-twentieth-century structure appears to have also been designed by Floyd Johnson. A front-gabled concrete block example is located at Totier Creek Farm. A modern open-sided well structure also exists at Monticola.

Pump houses are common throughout the district. These low, often shed- or flat-roofed structures primarily have a brick, stone or cinderblock foundation, and larger examples usually have a single-leaf entrance door. An unusually high-style example can be found at Seven Pines (circa 1930, 002-5045-1011), where the overhanging gabled roof and main gable are covered with slate. A simpler, more common type of pump house featuring a low, metal-covered, shed roof on a cinderblock foundation can be seen at the Esmont School (002-5045-1107).

Windmills

Several late nineteenth- and early twentieth-century metal windmills, most in fair condition, remain in the district. None of them currently appear to be in use. Windmills were first used in the United States beginning around the mid-nineteenth century and evolved from a four wood paddle system to multiple, stamped steel paddles, which were introduced in 1870. A windmill's function on the farm was to water livestock and to provide water for the main house and tenant houses. With the advent of a federal government program called the Rural Electrification Administration (REA), America's countryside began to receive electricity between the 1930s and 1950s, which resulted in the decline of windmills. The landscape of Albemarle County during the late nineteenth and early twentieth centuries was most likely dotted with hundreds of windmills, which have since been dismantled. They are indicative of development of farms on dryer lots that required drilling deeper wells that could not be accessed by traditional eighteenth- and early-nineteenth-century technologies. With missing paddles, the metal lattice work of three late-nineteenth/early-twentieth century windmills are still standing, located at 2205 James River Road (002-5045-1057), 7624 Secretary's Sand Road (002-5045-0948), Donegal (002-0241/002-5045-1098), and Greenmont Farm (002-5045-0614).

Workshops

Documented throughout the district are a large number of workshops as well as several blacksmith shops. Without access to the interiors of many of the buildings it is unclear if any of the workshops had a specific function like metalwork or textile production, which would give the buildings a more specific name such as blacksmith shop, loom house or weaving shop. Examples of historic workshops are located at Canaan (002-0444/002-5045-1070), Donegal (002-0241/002-5045-1098), Mt. Pleasant (002-0500/002-5045-1146), Bell Gate (002-0024/002-5045-1486), and Lion's Watch (002-0819/002-5045-1506).

Chicken Houses

While the district does not feature many chicken houses built to support large-scale poultry production, present are the circa 1941 chicken houses at Fairview (002-0117/002-5045-1282) near Scottsville. Built in long ranges, these wood frame structures feature shed roofs and facades dominated by tall, double-hung windows and are accessed by single-leaf doors on the sides of the structure. Smaller one-room chicken coops for individual domestic use are much more common. These wood-frame structures have shed roofs, wood-frame construction,

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 35

large windows, and weatherboard cladding.

Detached Kitchens

Detached kitchens, almost all dating to before the Civil War, are found throughout the district. Examples can be found at Morven (002-0054/002-5045-0166), Estouteville (002-0032/002-5045-0598), Blenheim (002-0005/002-5045-0239), Roundtop (002-0070/002-5045-0515), Hillcrest (002-5045-1592), Ellerslie (002-0484/002-5045-1557), and Hatton Grange (002-0105/002-5045-1439). These kitchens are all one-story brick structures. A majority of them feature one-room plans, although the kitchens at Roundtop and Estouteville hold two rooms. It is believed that the second room in the Estouteville kitchen housed a school. The kitchen at Hillcrest, which is detailed with a houndstooth cornice, was also multi-functional, serving as a kitchen and laundry. The ruins of an additional large brick kitchen are found at Mountain Grove (002-0095/002-5045-0952).

Corn Cribs and Granaries

Like barns, corn cribs and granaries are found throughout the district. These structures reveal the region's association with dairying and livestock production from the late nineteenth century through to the beginning of the 21st century. A simple wooden granary that was built to serve a small farm stands at 7577 Blenheim Road (circa 1920, 002-5011/002-5045-1212). One of the most interesting examples in the county is the nineteenth-century corncrib at Hatton Grange, which features horizontal wooden ventilation slats, a gabled roof, a pier foundation, and decorative scalloped vergeboard.

Other Farm Outbuildings

Other support buildings on farms as well as smaller properties throughout southern Albemarle County include animal shelters, small barns, chicken coops, hay barns, garages, machine sheds, farm offices, riding rings, small sheds, storage buildings, tractor sheds, and wood sheds. Many of these buildings, as well as previously described types, are designed and built for functional purposes only using vernacular building traditions, and typically lack any ornament or embellishments, although a few exceptions in the district stand out. The barns at Donegal (1880 circa, 002-0241/002-5045-1098) are noted because of the rarity in the county of the simple application of ornament to most of the outbuildings. Several of the farm buildings at Donegal including the corncrib, smokehouse, and workshop are embellished with a scalloped vergeboard and gabled pinnacles, the best example of which is the corncrib. Another unusual corncrib in the district embellished with scalloped vergeboard is adjacent to Hatton Grange Mill (002-002-5045-1438). The tenant house at Mount Warren (002-0239/002-5045-1046) also displays decorative scallop-edged vergeboards on the gabled ends.

A rare surviving circa 1800 plantation manager's office survives at Ashlawn-Highland (002-0099/002-5045-0531). This simple, small, wood framed building features a gabled roof with a central doorway covered with a small gabled front porch and a gabled-end brick chimney. Covered with beaded weatherboards, the office features a one-room plan with an enclosed-winder stair that accesses a garret.

Schools

The 2004-2006 architectural survey of Southern Albemarle County recorded twenty historic schools and two non-

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 36

historic schools within the district's boundaries. In 1907, according to the Frank Massie *Map of Albemarle County*, 111 schools, both white and black, were located in the entire county teaching a total of 9,567 children.²⁶ Within the boundaries of the Southern Albemarle Rural Historic District are the locations of twenty-four of the 111 schools listed on the Massie map. Out of these twenty-four schools depicted on the Massie map, examples include the Glendower School (1869, 002-0040/002-5045-1278), Sand Road School (002-1496/002-5045-0990), Esmont School (002-5045-1107), and the Cool Springs/Dawson's Mill School (002-0435/002-5045-0851).

In addition to the Massie map, the 1928 *Pitner Map* and the 1936 *Map of Albemarle County showing primary and secondary highways* depict locations of black and white schools throughout the county.²⁷ Carl Pitner's 1928 map reveals twenty schools within the boundaries of the Southern Albemarle Rural Historic District, both black and white. Of these extant schools, Howardsville (1918, 002-0215/002-5045-0481), Woodridge School (1920 circa, 002-0468/002-5045-0553), Green Creek School (1920 circa, 002-5045-0077) and Esmont High School (1922, 002-0408/002-5045-0455) are examples of schools constructed for white students. Three schools for African-American children, Rose Hill School (1917 circa, 002-0873/002-5045-0200), Chestnut Grove (1910 circa, 002-1140/002-5045-1418), and Mount Alto School (1920 circa, 002-1288/002-5045-1469) are also noted on the 1928 map. Other early twentieth-century schools in the district include the African-American Rosenwald school at Scottsville (002-1574/002-5045-1539) as well as two white schools at Milton (002-0929/002-5045-0190) and Simeon (002-1543/002-5045-0223).

It is possible that several ruinous schools remain hidden along abandoned or altered roads. The 2004-2006 survey was given limited access to these areas. One exception is the brick kitchen building at Estouteville, which is said to have also housed a plantation school.

White Schools

The earliest remaining school built for white children is the circa 1905 Esmont School at 3053 Boatwright Lane. Esmont School features a one-story, T-shaped plan with a hipped roof and low central gable embellishing a hipped-roof porch. The principal façade features paired, six-over-six double-hung windows flanking a central single-leaf entry that features a three-light transom and two three-light, one-panel side-lights. The side elevations also feature paired, six-over-six double-hung sashes, and a central interior chimney is found at the intersection of the main block with the rear ell. Currently used as a dwelling, the building remains many of the historic details that identify it as a former school house.

The large school at Howardsville, built in 1918 (002-0215), is one story and stands six bays wide. The school is clad with weatherboard siding, and is capped with a hipped roof with two interior brick chimneys. The façade is pierced with nine-over-nine windows and the central entrance is illuminated with sidelights and is sheltered with a small projecting gabled portico.

Green Creek School built around 1920 was a simple front-gabled, wood-frame school one story in height with one interior chimney. It has since been altered with numerous additions on both the front and side elevations. This property still has a school bell and a two-room privy that may be contemporary to the school.

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 37

Another 1920s school is sited just north of Woodridge at the intersection of Rolling Road and Ed Jones Road. The L-shaped footprint differs from all other extant historic schools giving it the appearance of a dwelling. The recessed side ell creating the L-shape was a common house plan from the first quarter of the twentieth century. This school contains two-over-two windows and the entry is through the recessed ell. It was originally clad with weatherboard siding and the gabled roof features overhanging eaves and cornice returns characteristic of the Colonial Revival style.

Built in 1922, the Esmont School is a large four-room country school, three bays wide, capped with a pyramidal roof. One story in height, it is clad with weatherboard siding and the façade is dominated with a projecting tetrastyle portico supported with Tuscan columns. The original nine-over-nine windows have been replaced and substantially sized down to six-over-six windows. The Esmont School contains one interior chimney and also features a side entrance.

Built around 1920, the school at Simeon (002-1543) is a modest Craftsman-style schoolhouse set on a poured concrete foundation, three bays wide, and one-and-a-half stories with shallow-pitched shed dormers on the side elevations. Clad with weatherboard siding, the school is capped with a hipped roof which features very wide eaves and scroll-sawn exposed rafters.

A smaller school in Milton was built around 1940 and is located at 1814 Milton Road. This building is one story in height and features a square-shaped footprint with a hipped roof. It is constructed of concrete blocks clad with stucco and contains two-over-two windows, a panel-and-light wood door, and a central-interior parged chimney.

African-American Schools

Six historic African-American schools in the district remain extant, three of which are on Massie's 1907 map; Glendower school, the school at Dawson's Mill, Sand Road School, Chestnut Grove School (1910 circa, 002-1140), Rose Hill School (1916, 002-0873), and Scottsville School (1924, 002-1574), the latter of which is a Rosenwald School.²⁸ The 1907 Yancey School was replaced by the present Benjamin Franklin Yancey Elementary School. No evidence of the original school was noted. The Sand Road School is the only early twentieth-century school that is depicted on all three historic maps.

The earliest black schools in the district are at Glendower, and possibly Dawson's Mill, both dating to the mid- to late-nineteenth centuries. Set on a random rubble foundation, the school at Glendower is a one-and-a-half story rectangular-shaped building with a front-gabled roof. It has a large central door flanked by six-over-six wood-sash windows. The façade features a pulley system above the upper story window. The roof extends out quite a bit on the façade sheltering the pulley system. This building may have served as something other than a schoolhouse when it was originally built. The 1907 map shows a 'Colored College' adjacent to Gordon Merrick's property in Glendower. The 1928 *Pitner Map* shows a white school at this location and no school at this location is noted on the 1936 county map.

Albemarle County, VA**

Section 7 Page 38

One of the smallest one-room schools in Albemarle County is the small school at Dawson's Mill just south of Porters and Esmont, also referred to as Dawson's Plantation School. Built during the mid- to late-nineteenth century, this tiny building is one story in height, clad with weatherboard siding, and is capped with a steeply pitched side-gabled roof. Set on a random-rubble foundation, the school contains a centered single-leaf entry on the north elevation with a four-light/two-panel wood door covered with a Queen Anne-style screen door. The interior is illuminated with double-hung windows on two sides. The building is further embellished with a decorative bargeboard on both gabled ends.

The school at Chestnut Grove built around 1910 appears to be a one-teacher school, standing one story in height and three bays wide with an off-center entry sheltered by a shed-roof portico. The façade contains large four-over-four wood windows and the school features exposed rafters and a corbeled brick chimney. Although not a Rosenwald-fund constructed school, it closely follows the general Rosenwald form.

Built in 1916, the Rose Hill School features a T-shaped footprint with a central gabled vestibule projecting from the façade of the main block. It contains four-over-four windows and the entrance is more elaborate with the double-leaf paneled doors surrounded by three-light/one-panel sidelights and a four-light transom. Although not a Rosenwald-fund constructed school either, this school also closely follows the general Rosenwald form.

By 1907, Mt. Alto was home to a small African-American population which supported its own church, Mt. Zion Church, as well as its own school. The original one-room black school was built in 1890 for \$700, which taught approximately nineteen students at this time. According to the 1907 Massie map, the school was set off at a distance south of Mt. Alto Road (Rt. 735). Around 1920 the current Mt. Alto school was built possibly using materials taken from the original schoolhouse. This school is sited immediately adjacent to Mt. Alto Road and is noted on both the 1928 Pitner Map and the 1936 county highway map. Interestingly, the 1928 map denotes the school as African-American, however, in 1936 it served as a white school. By this time an African-American school was located a very short distance away to the northwest sited immediately adjacent to Mount Alto Road. These buildings are no longer present.

The Mt. Alto school house, built around 1920 on Mt. Alto Road, is a one-story structure with a three bay façade, a central double-leaf entry, and a front-gabled roof. The gabled façade contains the main entrance with a side entry on the elevation facing Mt. Alto Road. This building contains one central-interior brick chimney, is pierced with six-over-six wood windows, and is clad with weatherboard siding.

The Scottsville School was built during 1924 to 1925 at a total cost of \$3,400, including money received from the Rosenwald fund. Quite interestingly, whites contributed more than twice as much as blacks for the construction of the Scottsville school, which equaled the total of white contributions for the remaining seven Rosenwald schools constructed in Albemarle County. The Scottsville School is the only brick school in the district. This school features an L-shaped footprint with a recessed side ell containing the main entry. Each block features a central-interior brick chimney rising above the hipped roof.

Section 7 Page 39

Churches

Due to the large size of the district, there are quite a few churches in the area to support the local communities. As early as the county's founding, churches served as the social and community centers outside of plantation life. Originally located within St. Anne's Parish, the district featured two early associated churches, including Ballenger's and Old Forge. Neither is standing, but the sites have been documented. Extant churches within the district's boundaries range in date from 1832 with Christ Church at Glendower (002-0014/002-5045-0639) to 1993 with the Woodridge New Hope Pentecostal Holiness Church (002-5045-1141). The glebe house for St. Anne's Parish, the only remaining glebe house in the County, was moved to Cloverfields in Keswick in 1946. Only a small number of religions and their sects are represented within the district including Methodist, Baptist, Pentecostal, and Episcopal, while the Baptist religion is the most prevalent of all represented religions in the district. Blenheim features an historic private chapel, while Esmont Farm includes a modern dovecote that also functions as a private meditation chapel.

Styles represented in the district's churches include Greek Revival, Gothic Revival, and Colonial Revival, although vernacular interpretations are also present. One of the more architecturally important churches in the district is Christ Church, Glendower (1832, 002-0014), constructed by Jefferson's renowned brick mason William B. Phillips. The Virginia Landmarks Register extols the design and states "no more engaging example of the Jeffersonian idiom survives than this small but sophisticated country church."²⁹ Following a strict adherence to the Greek Orders, characteristic elements exhibited in Christ Church are the temple form, Flemish-bond brick construction, a heavy and wide, academically proportioned Doric entablature, the shallow-pitched gabled-front roof, and the elaborate door surrounds. Two double-leaf paneled doors provide entry into the church and the side window bays are set in a recessed panel of bricks. The doors feature half-round louvered transoms with keystone surrounds. Above each of the two double-leaf entrances is a half-round, multi-light window (with surrounds similar the doors) that are used to light the loft. The full pediment with closed tympanum on the facade also contains a larger half-round louvered vent with central keystone. Three large, eight-over-eight double-hung windows with half-round, in-filled transoms pierce each side elevation. The frame vestry found on the rear of the building was built in 1848. The interior of the church was renovated by restoration architect Floyd Johnson.

Built in 1851, a more simplified Greek Revival church is the Howardsville United Methodist Church (002-0177/002-5045-0476). Similar to Christ Church, this building has front-gabled orientation and two double-leaf paneled wood doors on the façade. It is set on a raised foundation, clad with stretcher-bond brick, illuminated with rectangular transoms, and, most notably, features full-height Tuscan pilasters constructed of brick to separate the two bays. Also typical of many churches during the mid-nineteenth century are the two separate entry doors for men and women.

Sharon Church (002-0779/002-5045-0873) in Chestnut Grove is another example of the of the Greek Revival style church within the district. The one-story front-gabled church presents a temple form with a full-width inset porch supported by square posts and a closed tympanum. Other detailing includes a square transom, double-hung windows with marbled opaque panes, a gable-peak lunette window, and central double-leaf doors.

Albemarle County, VA**

Section 7 Page 40

During the Gothic Revival period, it was considered particularly appropriate to use the style for ecclesiastical buildings due to its association with the medieval cathedrals in Europe. Many of the churches from the mid-nineteenth century through the first half of the twentieth century reflect Gothic Revival elements. Five such churches in the district were constructed during and after the officially recognized Gothic Revival period. Exemplary examples of the style in the district are Centenary United Methodist Church (1840/1907, 002-1311/002-5045-0907) near Old Dominion in the far western portion of the district, St. Luke's Episcopal Church (1892, 002-0478/002-5045-0219) located in the northern section of the district in the village of Simeon, Alberene Church (circa 1900, 002-0758/002-5045-0979), Sand Road Baptist Church (002-0760/002-5045-0988), and St. Stephen's Episcopal Church in Esmont (1914, 002-0356/002-5045-0456). While the churches reflect the lack of ornamentation typical of small, wood-frame rural churches throughout the state, the common decorative elements used on the structures include centered facade entrances and windows capped with gothic arches.

As mentioned previously, the Gothic Revival style in rural settings such as Albemarle County did not stray from the concepts of balance and symmetry, which were the very ideas that the style was supposed to counteract. Centenary Church built in 1890 still maintains some semblance of symmetry in its form, placement of towers, and window and door bays. It is comprised of four parts: a rear side-gabled block, and a centrally-placed front-gabled block flanked by two pyramidal towers. Interestingly, in order to follow the prescribed order of the day, it employs varying rooflines and an asymmetrical form by placing the projecting bays just slightly off center and making the bell tower somewhat shorter in height than the entry tower. Other Gothic Revival elements, in addition to this slight asymmetry, include the use of a bell tower as well as lancet-arched multi-light windows and door transom. Similar to Centenary Church, St. Stephen's Episcopal Church features a basilica footprint, and lancet-arched windows; however, it has only one corner tower, which contains the entry. The tower is also crenellated, another characteristic of the Gothic Revival style.

Much more symmetrical by comparison is St. Luke's Episcopal Church in Simeon, built two years after the construction of the Centenary Church. This building disposes of the Gothic Revival ideas of asymmetry and varying forms and rooflines. Influenced by the beginnings of the Colonial Revival style, this church has a common front-gabled form symmetrically set with the placement of a central gabled vestibule flanked by long rectangular lights. The slightly projecting gable of the façade is detailed with a large, inset lancet-arch cut away that surrounds the vestibule. The roof is topped with a small pyramidal-roofed belfry with round-arched vents. Symmetry is also reflected in the placement of two chimney stacks on either side of the belfry.

Illustrating the combination of Colonial Revival and Gothic Revival styles is the New Green Mountain Baptist Church (002-5045-0762) built around 1950. Set in the common gabled-front rectangular-shaped form that is four bays deep, this concrete-block church features a full-height, full-width tetrastyle portico on the gabled vestibule. The portico is supported with fluted columns on brick piers and features a full pediment with a small half-round window in the tympanum. Other features include a large steeple atop the vestibule, concrete-block buttresses between each bay on the side elevations, and double-hung, lancet-arched windows.

Albemarle County, VA**

Section 7 Page 41

Very few of the churches in the historic district can be labeled a particular style. Rather, most are vernacular, lacking any ornament or embellishments and maintaining a similar form from one to another. The basilica-like form is the most popular church form used in the district among both historic and non-historic churches, with only one church embracing a differing form, Centenary Church. Of the basilica-form historic churches, examples with and without vestibules were noted. The vestibules range in size covering nearly the full width of the façade to just serving as an entry centrally placed on the façade. Additionally, vestibules are sometimes expanded, creating a multiple-tiered tower, the top tier usually as a belfry or ventilator. Examples of churches with vestibules include Alberene Baptist Church (1901, 002-0422) featuring Gothic arched windows, Middle Oak Baptist Church (1891, 002-1161), Slate Hill Baptist Church (1870, 002-0475), New Hope Baptist Church (1950, 002-0434), and Bethel United Methodist Church (1855, 002-0393). Churches without vestibules include Mt. Zion United Methodist Church (1900, 002-0437) and Union Baptist Church (1952, 002-0767).

Mills

During the mid- to late-eighteenth century Albemarle County began a transition from a monoculture of tobacco to wheat as its primary agricultural crop. With several large rivers and tributaries running throughout the district, grist mills and merchant mills quickly took root. Water power was the mainstay for manufacturing during the eighteenth century and throughout much of the nineteenth century. The production of flour from grains became one of the county's leading economic industries; thereby making the miller a prominent local resident as well as creating small communities that used the mill as its commercial and social core.

The first documented reference to a constructed mill in Albemarle County was in 1741 on Preddy's Creek. One of the first mills in the district was Secretary Carter's mill on the Hardware River at Carter's Bridge. In 1757 Peter Jefferson built a mill on the Rivanna River near his home at Shadwell. These mills were destroyed in a 1770 flood, but were rebuilt by Thomas Jefferson on nearby higher ground in 1802 (mill ruins, 002-5045-0050). Other eighteenth-century mills constructed in the district include the Warren Mill, Dyer's Mill, Old Harris Mill, Cocke's Mill/Tsuquatantia, Secretary's Mill, Harris Mill, and Henderson Mill. Of these early mills only the Warren Mill stands (002-0189/002-5045-1088), although ruins of the Harris mill remain near Mountain Grove. Similarly, the ruins of the circa 1854 Dawson's Mill (002-0435/002-5045-0851) at Cool Springs, which ground corn and wheat, survive. Warren Mill was built for Robert Carter Nicholas in 1759. During the mid-nineteenth century this mill burned and was later restored to its present structure. Warren Mill is three-and-a-half stories in height, set on a random rubble foundation, with the first story laid in four-course American bond brickwork. The upper stories are wood frame and clad in weatherboard siding. Rising above the front-gabled, slate-shingle roof is one interior-end brick chimney with a corbeled cap and three gabled dormers. The window and door bays feature segmental-arch lintels comprised of two rows of headers. Two other mills also once existed at Ballenger's Creek near Warren.

Throughout the first half of the nineteenth century Albemarle County saw the construction of a large number of merchant mills. Thirteen nineteenth-century mills are noted on the Massie Map of 1907, although many others existed prior to that time. However, only two listed in the 1907 map remain extant today; the stone Peter Field Jefferson Mill (002-0089/002-5045-1154) dating to circa 1820 and the brick Hatton Grange Mill (002-5045-

**United States Department of the Interior
National Park Service**

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 42

1438) rebuilt in 1868. Henderson's merchant mill at Milton was another important mill structure. The Peter Field Jefferson mill was built around 1820 for the grandnephew of Thomas Jefferson, its namesake, on the Hardware River between Scottsville and Woodridge. Under subsequent owners, this mill has also been called Albemarle Mill, Lewis Mill, and Dolls Mill. It is a forty by seventy-five foot brick and stone building capped by a steeply pitched side-gabled slate roof. The structure rises three stories and features a central single-leaf entry, shuttered windows, and a lunette window in the gabled peak. Hatton Grange Mill was constructed in the first half of the nineteenth century and destroyed in 1865 during the Civil War. Rebuilt in 1868, the mill was built two stories in height set on a solid brick foundation and constructed entirely in a five-course American bond. Capped with a front-gabled, slate-shingle roof with a parapet on the gable ends this mill features an original iron water wheel from the Fitzwater Wheel Company in Andover, Pennsylvania.

Grist milling began to decline rapidly during the late nineteenth century when much of the area's grains were shipped via railroad primarily to the Midwest. A large number of mills and manufacturing buildings were still standing in Albemarle County in 1907 with a total of forty-eight in the county. Nearly all of the documented merchant mills in the district have been destroyed or demolished; however, of the extant three built in the district two have been adapted to private residential uses.

The property at 1070 Bishop Hill Lane (002-5045-0517) was also the site of a mid-twentieth-century saw mill that once served as a major employer in the Scottsville Region. The mill has since been removed. Other saw mills existed throughout the county, including one located near the mid-twentieth-century subdivision just north of Scottsville off Pine Street.

Commercial Buildings

Historically self dependent, southern Albemarle County features a large number of commercial buildings. Typically for an historically rural area, the commercial resources that exist are primarily small markets, groceries, and convenient stores/gas stations providing only the basic needs of the local population. Although most of the early plantation complexes were primarily self-sufficient, a number of small general stores offered non-producible items, particularly English imports. Early stores operated at many of the early villages and crossroads, including one run in Howardsville by a Glasgow merchant who lived at nearby Locust Hill (002-0583/002-5045-0533). More uncommon items were found at stores and other commercial enterprises in the larger towns outside the historic district boundaries such as Scottsville at the southeastern section of the county and Charlottesville adjacent to the northern boundary. Historic commercial resource types in the district other than the ones mentioned above also include a bank and a tavern. Several inns currently serve the district; however, their original purpose was as single dwellings. A few non-historic commercial buildings stand in the district, including several gas stations/convenient stores, five wineries, and one restaurant.

Common to rural areas, historic stores often were coupled with an attached residence or an apartment above the store. Several examples of this type are found in Albemarle County, although the majority of the stores are not mixed use and stand one story tall; holding only the grocery and sometimes a post office. No extant stores date prior to the 1880s, although evidence of the district's earliest store is at the Rectory which rests on the original

**United States Department of the Interior
National Park Service****NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET****Southern Albemarle Rural Historic District
Albemarle County, VA**Section 7 Page 43

foundation of the circa 1792 Dyer's Store. The store's business practice and slogan of giving a "plain deal" lent its nomenclature to Samuel Dyer's neighboring plantation Plain Dealing Farm. A number of other early stores are known to have existed in the county, but they are no longer standing. The majority of the remaining examples are of wood-frame construction. A few historic stores have been abandoned or have been converted for other uses, all of them retaining their historic appearance. The abandoned Howardsville Store (002-0207/002-5045-0482), standing in ruinous condition, is a two-story front-gabled wood-frame structure with a central entry and flanking display windows. The structure is detailed with decorative bargeboard.

Examples of mixed-use buildings in the district include the Keene Store (1900, 002-0414), Jackson Store (1920 circa, 002-1592), Powell's Corner Store (1900 circa, 002-0420), 9040 Tanbark Lane (1900 circa, 002-1637), 7603 Esmont Road (circa 1910, 002-5045-1123) and 7525 Porters Road (1915 circa, 002-5045-0800). The store on Porters Road and the Powell's Corner store are quite similar in composition with a three-bay front-gabled block and a side-gabled recessed ell on the right elevation. Both sections are two stories tall, and the store on Porter's Road features a two-story, two-tier porch on the gabled-front block, whereas the Powell's Corner store has only a one-story porch on the front-gabled block. The store at 7603 Esmont Road also retains a detached storage building/garage and a combination of Colonial Revival and Queen-Anne ornamentation. The Keene store is one of the area's larger stores with a five-bay wide façade. Two stories in height, the Keene store is clad with board-and-batten siding and features a two-story, two-tier porch across the full-width of the façade. The second floor was most likely historically used as an apartment or rented rooms and the first floor was the market. The store/dwelling combination at Old Dominion Store (circa 1920; 002-5045-0900) is another good example. The front of the building features a typical three-bay store front but is accentuated with a false-front that covers the gabled end. Attached to the rear of the store is a two-story, three-bay I-house with a full-length, shed-roofed porch. The store section fronts to Green Creek Road, while the dwelling faces a side yard.

The most common one-story form for a small rural store from the early twentieth century is a three-bay wide building capped with front-gabled roof. The entry is always centered and typically flanked by large windows. This form is exhibited with the Hatton store (1880 circa, 002-0773), Sinclair Store (1910 circa, 002-0554), Woodridge Market (1920 circa, 002-5045-0562), the store at 2760 Plank Road (1930 circa, 002-5045-0064), Old Dominion Store, and Dawson's Mill (1890 circa, 002-0435). The store at 7569 Porters Road is an unusual example of a one-story structure in that it is the only example with a hipped roof. It features a central entry flanked by plate-glass wood windows. Another example of a store with a central entry flanked by plate-glass windows is Sneed's Store in Esmont (002-0407/002-5045-0457), although this store incorporates a distinctive barrel-vaulted roof that is unique in the district.

The store at 5886 Alberene Road (002-5045-0060) was constructed circa 1880. The wood-frame store, now a dwelling, is two-stories high, three bays wide, and clad with asbestos shingles. The side-gabled roof is sheathed with standing-seam metal and has a center gable on the facade. Rising above the roof are two exterior-end brick chimneys; one has been rebuilt and one is parged. The façade is pierced with one-over-one wood-sash windows, and flanking the single-leaf entry is an octagonal nine-light fixed window. The central entry is covered with a hipped porch supported with turned and bracketed posts and turned balusters. Atop the roof is a small cupola

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 44

with louvered vents and flared pyramidal roof. Other features include overhanging eaves, and thin wood surrounds and sills. An historic two-story, gabled ell is located on the rear elevation and has a non-historic, one-story, wood-frame wing on a concrete-block foundation.

The Dawson's Mill/Cool Springs Store (002-0435/002-5045-0851) is a circa 1900, one-story wood-frame structure with a front-gabled roof, half-hipped porch, and central entry with flanking display windows. Set into the hill on a raised basement, the store is detailed with a boxed cornice featuring a square-edged fascia board and false returns. A shed wing was added later.

The most unusual country store building in the district is the Coles Carousel Store at 5461 Secretary Sand Road (002-0761/002-5045-0994) built around 1940 for T.I. Coles. So named for its shape, the octagonal building is capped with a conical roof. There is a double-leaf door with bracketed shed overhang, a rear elevation exterior-end concrete block chimney, and exposed rafter tails.

By the mid-twentieth century commercial buildings developed a new form in response to the overall need for efficient and economic construction following World War II. The Green Mountain Country Store (002-5045-0547), constructed around 1950, shows this simplified form, a square-shaped building constructed of concrete blocks capped with a flat roof. Another example is located at 1932 Irish Road, which was converted into a single-family residence in 1986. It stands out as a mid-century general store because of its shed roof, which provides a change from the more common front gabled roofs of the nineteenth and early twentieth centuries. Two other examples are located along Irish Road (Route 6).

A small handful of service stations from the first half of the twentieth century stand in the Southern Albemarle Rural Historic District. Located along historically well-traveled routes, several of the extant service stations in the district include the Colle Service Station (circa 1930, 002-0834), 1435 Scottsville Road now called Hiter's Used Cars (circa 1940, 002-5045-0107), Wayne's Country Store at 3591 Scottsville Road (1950 circa, 002-5045-0505), and 5668 Irish Road (circa 1950, 002-5045-0919) to name a few. Common with service stations of the 1920s and 1930s are projecting canopies, or porte cochères, one of which can be seen on the Colle Service Station at the intersection of Milton Road and Thomas Jefferson Parkway. This distinctive one-story building is constructed of field stone, stands three bays wide, and is capped with a hipped roof that extends out to create a porte cochère which shelters the façade. Paces Store (1930 circa, 002-0433/002-5045-1125; 3127 Paces Store Road) in Esmont is another typical example that also features a porte cochère.

The Esmont Bank (002-0428/002-5045-0458) is a rarity in southern Albemarle and is the only historic bank building standing within the boundaries of the rural historic district. It was once one of only three banks in the county, although a bank also formerly existed in Howardsville. Constructed around 1902, the bank closed in 1933. Constructed of brick, the bank is two-and-a-half stories in height and stands three bays wide on the façade and four bays deep creating a square-shaped footprint. Typical of the Colonial Revival style, this structure has a central entry accentuated with a pedimented surround visually supported with Tuscan pilasters. The entry is illuminated with a rectangular transom and three-light/one-panel sidelights. The two end bays on the first story

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 45

of the façade are set in slightly recessed niches and feature round-arched keystone lintels. The windows are twelve-over-one double-hung sashes and the roof is detailed with wide eaves and a wood denticulated cornice with modillions.

Taverns, or ordinaries, were present in the district as early as 1745, when the first license to operate this type of business was granted to Daniel Scott near the first courthouse site. By 1748, there were five in operation in the county. The tavern was state controlled in terms of rates, liquor, and accommodations. Typically providing food, liquor, stabling, and guest rooms, the tavern served as a local community center; often located along stage roads or turnpikes, near courthouses, or anywhere else travelers were frequent. Michie Tavern (002-0093/002-5045-1047) originally operated as early as 1784 on Buck Mountain Road in the northwest portion of the county. Although heavily altered, the tavern was moved to its present site near Monticello in 1928, where it operates as a museum and restaurant.

A second tavern is located in the district at Milton. Known as Locust Grove (002-0299/002-5045-0504), the circa 1812 tavern remains one of the few buildings original to Milton. The original section is a one-story hall-parlor plan with an exterior-end double-shouldered brick chimney. A jail is said to remain in the basement. The building was expanded circa 1857 with the addition of a wood-frame I-house wing. A school and grocery store were also said to operate at Locust Grove.³⁰ Other early nineteenth-century taverns were known to exist near Plain Dealing and at Warren. The Warren tavern, dating to circa 1804, was a two-story stone structure erected for Wilson Cary Nicholas. It featured a side-gabled roof and fenestration with prominent segmental relieving arches. The building was demolished in 1970.

Fraternal Meeting Halls

Three meeting halls for fraternal organizations are located within the boundaries of the historic district, including the Alberene Masonic Lodge #277 (1901, 002-0423/002-5045-0002), the George Masonic Lodge #32 (1846, 002-0178/002-5045-0477) in Howardsville, and the Odd Fellows Hall (1900 circa, 002-5045-0905) at 5089 Green Creek Road near Old Dominion. Each modest structure lacks embellishments and maintains a simple footprint and roofline. The Odd Fellows Hall near Old Dominion and the Alberene Masonic Lodge are both of wood-frame construction, whereas the George Masonic Lodge is brick construction. Additionally, the George Lodge dates to the mid-nineteenth century and so is just over fifty years older than the other two lodges. Historically, Masonic lodges tend to be located adjacent to a church because of their link with Christianity and often created a social core for small hamlets and rural villages. This is the case with the lodges in Howardsville and Alberene; however, the Howardsville Methodist Church was erected eight years following the construction of the Masonic Lodge. Architecturally, each hall features a rectangular-shaped footprint, rises two stories in height, has a gabled-front roof, features a single-leaf entry either centered or off center, and each hall is three bays deep with symmetrical fenestration on the side elevations.

Sites: Cemeteries, Quarries, Archaeological Sites

A significant number of cemeteries are found throughout the district. In form they range from small, plantation-based eighteenth- and early nineteenth-century graveyards to large twentieth-century cemeteries associated with

**United States Department of the Interior
National Park Service**

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 46

established churches, as well as small, private cemeteries located adjacent to a public road. Two examples of a fourth type, the large public cemetery, can also be found in the district, including Monticello Memorial Park (002-5045-1048) and the Scottsville Cemetery (002-0768/002-5045-1236), just north of Scottsville. Although in 1784 Thomas Jefferson excavated a Native American burial mound along the Rivanna River north of Charlottesville, no pre-contact funerary sites are known to exist within the district. Cemeteries in the district are also primarily divided between African-American and white burial grounds. One of the earliest documented African-American cemeteries is represented by the slave cemetery at Redlands (002-0067/002-5045-1488). Later, reconstruction era African-American cemeteries are also found in the district, including the Rose Hill Church Cemetery (002-0872/002-5045-0201) and Slate Hill Church Cemetery (002-0475/002-5045-0436). Both of these cemeteries continue to be used. The same range of funerary resources can be seen for white burials. One of the earliest white cemeteries is the Harris Cemetery (002-5045-0927) found at the corner of Secretary Sand Road and Old Sand Road. Another early white cemetery is found at Edgemont (002-0087/002-5045-0165). This cemetery is enclosed by a stone wall and reflects early plantation-based family cemeteries. A similar plantation-based cemetery is the Coles family cemetery at Enniscorthy, which is enclosed by a brick wall. Later white cemeteries are represented by the burial grounds at Alberene Baptist Church (002-0422/002-5045-0001) and St. Stevens Episcopal Church (002-0356/002-5045-0456) in Esmont. One noted mixed-race cemetery is located on Alberene Church Lane (002-5045-0975), although the larger cemeteries at Monticello Memorial Park and Scottsville appear to be as well.

Miscellaneous Resources

A number of other types of buildings and sites are scattered throughout the district creating a diverse architectural landscape across the area. These miscellaneous building and structure types include a summer camp, a personal and presidential library, detached kitchens, claim houses, observatories, and a bell tower. Other noted non-historic resources, primarily associated with the prominent tourism industry, include an observation platform at Carter's Mountain, an amphitheater and a nature trail at Monticello, and theatrical platforms at Ash-Lawn/Highland.

There are two libraries located within the district boundaries. One is the nineteenth-century private library at Blenheim, which was constructed in the Greek Revival style. The freestanding structure features a pyramidal roof and wrap-around porch with a wide cornice and Tuscan column supports. Central entrances on each elevation have half-round transom lights. Vastly different in scale and purpose, the Jefferson Library at Kenwood (002-0862/002-5045-1209) is a circa 2002 research library associated with Monticello. Modern in design, the building blends well with its surroundings evoking elements of Jeffersonian Classicism.

An additional notable property in the district is Camp Viewmont, now called Triple C Camp (002-5045-0501), which is located along Scottsville Road. Developed beginning in 1949, this camp was originally owned and operated by the Baptist Woman's Missionary Union of Virginia. It was so named for the home of Miss Lottie Moon, a recognized missionary and resident of Viewmont approximately three miles to the southeast, sited just south of Carter's Bridge. Built by Reverend George A. Harris, the camp first opened for four weeks in 1951 with two cabins and the administration building. According to an article in 1959 each of the cabins was named for

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 47

famous Virginia residences such as Monticello and Arlington. The camp originally consisted of a chapel, an administrative building that held the dining room, offices, and infirmary, five cabins that accommodated twenty-six girls each, a recreation hall, handcrafts building, classroom building, a staff house, a kitchen cabin, volleyball and basketball courts, a baseball field, and two swimming pools.³¹

Interestingly, there are two observatories located in the district, both of which were built at Lion's Watch around 1970. While these small, domed structures are not historic, they do reflect the eclectic range of secondary resources found in the district. An observation platform, also non-historic, is located on Carter's Mountain near the orchard store. It is a notable resource due to the outstanding views of the surrounding landscape it affords. Additionally, Jefferson constructed a garden house at Monticello, the reconstructed structure provides wide sweeping eastward views of the district and beyond, a landscape often referred to as the "Jeffersonian Sea".

Formal Gardens and Landscape Resources

Formal gardens are associated with many of the larger estates in the district. These gardens are often allied with the main house, but set below or beside the principal dwelling and sometimes enclosed with a masonry wall. While some of the existing gardens may have their origins in the eighteenth or nineteenth centuries, most of them reflect a Colonial Revival aesthetic that dominated garden design from circa 1900 to the 1950s. The gardens also often feature boxwood edging, tree-lined allees, planting parterres, and extensive terracing. Examples of these landscape design resources can be seen at Morven, Monticello, Estouteville, Redlands, Edgemont, Quiet Entry, Ash Lawn-Highland, Sunnyfields, and Plain Dealing, among others. Interestingly, the garden at Redlands, a combined vegetable and flower garden, was initially designed to form the Masonic insignia.

The only eighteenth-century designed landscape that has been extensively restored to its eighteenth-century appearance is found at Monticello. Using archaeological, physical and documentary evidence, many of the features of Jefferson's formal and vegetable gardens have been reconstructed. Based on ideals typified by the English landscape movement of the eighteenth and early-nineteenth centuries, Jefferson's formal garden included grand vistas, rolling lawns, a lack of foundation plantings, ha-ha walls, and an emphasis on curvilinear lines over straight lines. Showing the rising influence of the English garden designer Humphry Repton over his mentor Capability Brown, the formal landscape at Monticello also includes the limited re-introduction of planting beds.³² Monticello's early-nineteenth century garden was perhaps the larger, and most well developed garden in Virginia's Piedmont region at that time. The only gardens which rivaled President Jefferson's creation in the region were John H. Cocke's grand formal garden at Bremo in Fluvanna County and President James Madison's formal garden and picturesque grounds at Montpelier in Orange County.

Although not always formally planned or professionally installed, many of the properties throughout the district feature important landscape elements, including boxwood plantings, tree-lined drives, and picturesque entrances. A number of historic estates were named for their landscape features or surrounding views, including Woodville, Tallwood, River Lawn, Redlands, Viewmont, River View, and Monticello, among numerous others. The forms associated with the Colonial Revival garden had a fairly strong following in the region among upper-class estate owners. Noted examples in Albemarle County, but outside of the district, include Richmond-based master

Albemarle County, VA**

Section 7 Page 48

landscape architect Charles Gillette's (1886-1969) work at Edgehill, Windsor Hill, Cismont's Belvoir, Kinloch, Bridlespur, East Belmont (which was commissioned in 1964 by the late Mr. and Mrs. Archibald Craige and was one of Gillette's last designs), Rose Hill, Glen Echo, Flordon, Casa Maria, Tiverton and Blue Ridge. In addition, Gillette is known to have designed gardens for clients in Orange County including Rocklands, Lochiel and Christ Church Gordonsville.³³ Other famous landscape architects who developed gardens in Albemarle during the early- and mid-twentieth century include Ellen Shipman, who designed a garden in Keswick at "Marletotz" (a property that is currently known as Heathcote) for her daughter, Mary Shipman Jackson, and the Olmstead Brothers, who worked at Cobham Park, in Cobham, in 1924. Among the notable Colonial Revival gardens found in the surrounding counties includes Marion duPont Scott's re-interpretation of James Madison's formal garden at Montpelier, the boxwood gardens at Somerset Plantation, and the extensive formal gardens at Oakridge in Nelson County. The landscape work at the University of Virginia in Charlottesville also reflects the Colonial Revival aesthetic. Undertaken by the Garden Club of Virginia in 1948, the restoration project was led by noted landscape architect Alden Hopkins.

As evidenced by these examples, high-style Colonial Revival gardens are fairly common in the area and, specifically, the Southern Albemarle Rural Historic District reflects this trend. Similar in inspiration, form, design and planting choices, all of these gardens represent a garden design movement which was influential throughout much of the state, and the east coast, throughout the early twentieth century.³⁴

In addition to the Colonial Revival-inspired formal gardens at Morven, a two-acre Japanese garden is found in a ravine below the main house. Installed in 1994, this garden, complete with tea house, is one of the best examples of a Japanese-style garden in the state. Other modern gardens of note include the grounds at Enniscorthy. Extensively re-landscaped (to the detriment of noted historic outbuildings and gardens) in the 1990s, the gardens surrounding the house serve as an excellent example of high-style residential garden design at the end of the twentieth century. Another example of a modern landscape in the district can be found at Estouteville. In contrast to the major renovations at Enniscorthy, the new gardens at Estouteville have incorporated modernist designs into the existing landscape of formal gardens and historic outbuildings. The new elements include contemporary sculptures, a water garden in the ruinous foundation of a house that pre-dates the existing main dwelling, and a contemporary pool. In contrast to the more traditional Enniscorthy, Estouteville reflects a more post-modernist approach to designed residential landscapes. A similar post-modernist landscape aesthetic can be seen outside of the district in Keswick at the farm Chopping Bottom while a current project at Rocklands in Orange County to expand the existing Colonial Revival/Italianate garden reflects the tenacious hold of the last century's landscape and garden ideals.

Quarries

Several quarries are found within the district, reflecting the region's history of quarrying both soapstone and slate. Soapstone quarries are found near the towns of Alberene (002-1497/002-5045-0015), Damon (002-5045-0939) and Old Dominion. Associated with these quarries are several short-line railroad tracks that facilitated the movement of the quarried stone as well as the employees who worked at the soapstone companies. The track beds for these lines can still be seen in the district and the remains of an engine house can be seen in Esmont.

**United States Department of the Interior

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 49

Dwellings, industrial buildings, stores, and other related resources also remain at these sites. Additional soapstone mining resources are found at Quiet Entry (002-0042/002-5045-0163), while slate resources were noted near the town of Esmont and in the vicinity of Slate Hill/Overton, which also featured a pencil factory. A majority of the quarrying was undertaken to extract dimensional stone (with the exception of some milling to produce talc power or crushed slate, as seen at 002-357/002-5045-0464, near Esmont). Therefore, the existing quarries primarily feature large open pits that terrace inward as the quarry deepens. Several of these quarries are still active, although most of the quarries at Alberene have been abandoned and are now filled with water. The large stone quarrying operation of Luck Stone is also located adjacent to the northern boundary of the district near Shadwell. Although non-historic, and therefore not included in the boundary, the existence of the operation shows a continuity of mineral extraction in the area extending to the present.

Bridges

A majority of the bridges in the district are modern examples consisting of structural steel encased in concrete. This type of bridge, which is common across the state, shows little of visual interest above the deck level and almost exclusively paved with asphalt. In contrast to the modern bridges, two early- to mid-twentieth-century iron truss bridges remain in the district. The bridge over the South Fork of the Hardware River on Secretary's Sand Road (002-2134/002-5045-1045) and a bridge on Blenheim Road (002-2134/002-5045-1045) are both examples of a pony Pratt truss bridge that were once commonly used in the region to span small distances. Both of these bridges have a truncated Pratt truss that extends past the deck and are paved with wooden decking. A similar truss bridge over the Hardware River at Carter's Bridge on Route 20 was replaced in 2006. Although a new concrete deck bridge was constructed, it was detailed with obelisk ornamentation at the urging of local residents. A swinging pedestrian bridge once spanned the Rivanna River linking the south side of the river at Auburn Hill to Shadwell Depot.

Canals/Railroads

The remains of two canal systems, the Rivanna Navigation Company's canal and the James River and Kanawha Canal, can both be found in the district. Located at the extreme northern and southern boundaries, the canals once formed a vital trade link to the regions outside of the district. The James River canal system, the nation's first in operation, was begun in the late 1700s, but it only gained momentum after it was purchased by the Commonwealth of Virginia in 1820. The remains of the canal are mostly seen as a series of deep, relatively narrow conduits that run roughly along the path of the James River. However, the best preserved remnant of the canal, the large, arched -stone Ballinger Creek Culvert (circa 1840; 002-5045-1088) is found in the district near the village of Warren.³⁵ Finally, traces of the original towpath for the James River and Kanawha Canal were incorporated into the bed for the 1880 Richmond and Allegheny Railroad.³⁶

The Rivanna Navigation Company began improving and clearing the Rivanna River for greater navigation in the mid- to late-eighteenth century. Long supported by Thomas Jefferson, the improvements made by the company were directly tied to an attempt to replicate Scottsville's thriving trade economy. By 1827 the Rivanna Navigation Company was actively building sections of the Rivanna Canal (prior to this date they had increased

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 50

navigation by blasting sluices through the rivers rapids). Other than clearing rocks and deepening sluices, the main elements of the canal built by the company were the wing dams and locks. Crib dams, planked log pens filled with stones, appear to have been the main type of dam used in the canal. Traces of these dams can be seen in the district at Shadwell (44AB133; 44AB134) and Milton (44AB106/002-5045-1591). The ruins of locks are also associated with these dams and most spanned eight feet wide. A major flood in 1870 washed away many of the dams and locks and they were never reconstructed.³⁷

Although not widespread within the district, railroads had a dramatic impact on the economic and agricultural development of the region. Within the district boundaries only a line running parallel to the James River, the Richmond and Allegheny, was of significant regional importance. A railroad bridge remains near Howardsville (002-5045-0529). One of the county's other important railroads, the Chesapeake and Ohio, ran just north of the district, with a depot at Shadwell. With the rising importance of the soapstone and slate industries, short-line railroad tracks that facilitated the movement of the quarried stone as well as the employees who worked at the soapstone companies, were developed throughout the southern portion of the district, accessing Alberene, Damon, Old Dominion, Esmont, and Bolling Siding, as well as Schuyler in Nelson County. The track beds for these lines can still be seen in the district and the remains of an engine house and slate abutments still stand in Esmont.

Non-Historic Resource Development

The Southern Albemarle Rural Historic District is an intact rural landscape with historic buildings and structures dating from the mid-eighteenth century to the mid-twentieth century that retains a high level of historic integrity. Pastoral farmsteads are set within an undulating landscape featuring open pastures, wooded forests, rising mountains, and level flood plains. Primarily due to its proximity to Charlottesville, the district contains a number of non-historic resources, some of which are primary resources. However, this does not detract from the district's significance as a rural landscape, as much of the new construction has been placed along major roads throughout the district and the majority of it is not collected together in large developments. Small parcels adjacent to the roads were formed from large farms allowing for a disbursement of non-historic structures versus large clusters. Some of the most recent development has been located on the boundary edges and therefore omitted from the district. Most importantly the non-historic resources are not visible within the extensive, abundant and extraordinary views throughout the district. Additionally, these resources have not compromised the area's agricultural vitality and rural character.

Southern Albemarle Rural Historic District Inventory Report

The inventory is listed alphabetically by street address.

This building, the Vice-President's House, was the first structure to be built on Executive Row. The wood frame, weatherboarded structure has a side-gable roof with a center gable on the façade. Rising above the slate tile roof are two interior-end brick chimneys. The porch is a one-story, eight-bay wrap-around with a cross bracing balustrade and Tuscan posts on brick piers. The façade is illuminated with 6/6 double-hung wood sash windows and the center gable is pierced with lancet-arched 4-light fixed-sash window. The door is paned and paneled with sidelights.

Primary Resource Information: **Single Dwelling, Stories 2.50, Style: Queen Anne, 1899**

This residence served as the President's House for the Alberene Stone Company. Its most unique feature is the use of soapstone on the exterior; in fact, this is the only house in the United States with ornamental soapstone siding. On the exterior of the ground floor, milled soapstone rectangular blocks are applied to brick walls. Chimneys are clad in soapstone, and the porch steps and sidewalk are composed of the stone also.

The brick foundation of this dwelling is solid American bond with soapstone block paneling. The wood-frame walls are clad with wood shingles with the first story covered with soapstone. The double-hung windows are boarded and the central-interior chimneys are constructed of soapstone blocks. The wrap-around porch is supported with Tuscan wood columns on brick piers and covers a double-leaf entry. The hipped deck roof is clad with slate tiles and has two projecting front gable sections, a pyramidal tower, and two gable dormers. The entry is illuminated with stained glass sidelights. Extending off the wrap-around porch is a gable portico section that has a gable pediment with heavily molded cornice returns. The octagonal tower is capped with a finial and is pierced with windows on three sides. The projecting gable on the facade is pierced with a three-part window with a molded wood surround with a keystone. The porch on the side elevation has been removed. There is a one-story half-hipped porch addition partially enclosed on the rear elevation. The roof is adorned with two gabled dormers clad with wood shingles with a molded cornice and returns. The roof features wide eaves and a molded wood cornice.

The president's house was one of the first in the area to be constructed with both electrical service and a steam heating system. Plumbing and electrical maintenance and repairs have occurred since the house was built in 1899. Other original features include an indoor bath (with the sewage piped to a cinder pit around back), built-in gutters for drainage to the road, a battery-operated doorbell system, and mechanical speaking tubes.

Soapstone is used in various ways on the interior of the house. All of the fireplaces are lined in soapstone, and the living room mantle is elaborately carved. In the kitchen, soapstone is used for the sinks and as backing for the stone. In addition, laundry tubs and an electric panel on each floor are of the Alberene Stone Company's material.

Architecture Summary: flanked by two shed roof additions with usually high chimneys

One-and-a-half stories, this wood-frame dwelling consists of a rectangular-shaped footprint with shed-roof wings on each side elevation. Resting on a solid random rubble foundation, this house is clad with beaded weatherboard siding and is capped with a side-gable, slate-shingle roof. The façade is pierced with 9/6 wood-sash windows and a central single-leaf wood paneled door. There is one large central-interior parged stone chimney and two exterior-end random rubble chimneys. Two gable dormers each with one 6/6 window adorn the façade of the main block. The projecting vestibule on the façade features a full pediment and the entry is illuminated with a 4-light transom. The main block of the house is five bays wide and the shed-roof wings are one-bay wide each with exterior-end chimneys. A gable-roof addition stands on the south elevation and is detailed with two cross gables over the 4-light casement wood windows. The hyphen to the gable section may have been a detached kitchen originally. This hyphen contains one of the exterior-end chimneys. The kitchen block has a garage/carriage addition onto it. The rear elevation shows a shed-roof porch across the full-width of the main block and three gable dormers on this section as well.

002-0002

Other DHR Id #: **002-5045-1211**

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Georgian, 1794**

Architecture Summary: Bellair is an 853-acre farm (of which 250 acres are included in this nomination) located in southern Albemarle County. The main house was built sometime before 1817 by Charles Wingfield, Jr., with additions in the Colonial Revival style in the 1930s by architect Marshall Wells and again in the 1960s by architect Floyd Johnson. The original house is two stories high and five bays wide with a gable roof and end chimneys. It features a basement laid in Flemish bond, beaded siding, and modillioned cornice on the south and north facades. The door and pedimented portico on the main (north) facade date from the 1930s; the door on the south is original. The two one-story, one-bay wings also feature beaded siding and a modillioned cornice; they were extended an additional bay in the 1930s. The two-story porch along the south elevation was built in the 1960s. The interior of Bellair features a single pile, central-hall plan. The stair rises in two stages and features much original woodwork, including a paneled wainscot. The living room features a large fireplace mantel of Federal design with some other woodwork added in the 1930s. The dining room is largely unaltered with the exception of the full-length paneling and cupboards on the east wall. The two bedrooms on the second floor also feature original woodwork. Later changes include the addition of a kitchen and drawing room in the west wing and a bedroom and bath in the east wing. Contributing buildings on the property include a mid-nineteenth-century frame guest house, a mid-nineteenth-century smokehouse, and an early-twentieth-century overseer's house. Noncontributing buildings and structures include a guest cottage, a pool house, and the pool. To the east is a contributing site, the Timberlake family cemetery, in which the Reverend Walker Timberlake (1781-1863) and his family are buried. (NRHP-Nom 8/92)

2005 survey:

The main dwelling at Bellair is a five-bay-wide two-story weatherboard-clad structure constructed circa 1794, with 1822 wings. Set on a Flemish bond brick foundation, the dwelling features a side-gabled main block and one-and-a-half story side-gabled wings, both with slate shingles. The symmetrically fenestrated main block is characterized by a central single-leaf six-paneled entry sheltered by a three-bay gabled portico with closed tympanum, a molded cornice with modillions, a Chinese Chippendale balustrade, Tuscan wood posts, and a double return stair. The central block also features 9/9 wood windows on the first story and central bay of the second story and 6/6 windows in the remaining second story bays; each with molded wood surrounds. Other detailing on the main block includes exterior-end Flemish-bond brick chimneys, a modillion course at the cornice, and operable louvered wood shutters. The one-story flanking wings each features a pair of gabled dormers, 6/9 wood windows, a modillion course cornice, and basement-level louvered vents. The rear elevation of the main block is dominated by a two-story five-bay porch. The upper story features arches bays, Tuscan posts, and a Chinese Chippendale balustrade, while the ground floor is screened. The wings each feature a pair of gabled dormers with shed rear additions.

Blenheim Lane

55 Blenheim Lane 002-0005 Other DHR Id #: 002-5045-0239

Primary Resource Information: **Single Dwelling, Stories 1.50, Style: Gothic Revival, 1846**

The main house is a long (92 feet), narrow, six-bay, one-and-a-half story, wood-frame building with an ell at the rear of the west end. Decorated in a combination of the Gothic Revival and Greek Revival styles, it is clad with beaded weatherboards butted against corner pilasters and is capped with a side-gable, asphalt shingle roof. The house rests on a solid irregular American bond brick foundation. One interior and two interior-end chimneys surmount the main block, with an additional interior chimney serving the ell. Each chimney has a corbelled cap and the western chimney of the main block is a dummy added for symmetry. The façade is pierced with two five-light (with Y-tracery), gothic-arched, wood-casement windows and two projecting bays each with two multi-light/2-light wood-sash windows. The two front doors, with their fretwork enrichments designed after the manner of Asher Benjamin, are protected by one-story tetrastyle porches with pairs of Greek Doric piers, plain entablatures, parapets, and small corner urns. The entries are illuminated with 2-light transoms. Four gabled dormers adorn the façade and each contain pointed-arch, multi-light casement windows. The basement on the façade contains 2-light awning windows. A long gallery shades the rear of the house, and a third porch projects from the ell. The rear elevation is adorned with three dormers similar to the façade. Other architectural features include a molded wood cornice, Gothic-arched louvered shutters, and molded wood surrounds. The plan of Blenheim, with its five major rooms and two passages, is in effect that of two central-passage houses placed end-to-end, with the addition of a pair of service rooms at the eastern end and a large parlor ell at the west. Inconspicuous winder stairs occupy a corner of each passage.

A sign on the property gives this property a date of 1775, however, the front block of the dwelling appears to date to the mid-19th century. A more in depth look of the dwelling would verify an earlier date.

Two-stories in height, this wood-frame dwelling features a complex L-shaped footprint with a rear gable ell. Resting on a solid random rubble foundation, this dwelling is clad with weatherboard siding, is pierced with 6/6 wood-sash windows, and a central single-leaf, wood panel-and-lights door. Covering the first story of the façade is a full-width, half-hipped roof porch supported with square wood posts. Rising above the side-gable, standing-seam metal roof are two exterior-end brick chimneys. The façade features a center cross gable. The rear ell is one-and-a-half stories and contains one central-interior brick chimney and has two gable dormers. A hyphen connects the rear ell to a non-historic, one-story addition with a gable roof. Other architectural features of the house include wood louvered shutters, square-edged surrounds, shouldered chimneys, and moderately overhanging and boxed eaves.

This dwelling appears to have been constructed in several phases and creates an elongated, complex L-shaped footprint. The original dwelling is a two-story structure with a wrap-around porch and a one-story, shed-roof addition on the rear elevation. A 1988 addition was added to the southeast corner. This addition is one story in height. Next a one-story addition was made to the southeast corner of the 1988 addition. The wood-frame house rests on a solid foundation, is clad with weatherboard siding and the side-gable roofs are sheathed with asphalt shingles. The main block features the one-story wrap-around porch, which has been partially enclosed and is supported with Tuscan wood posts. This section is pierced with 2/2 horizontal wood-sash windows and a 1-light fixed window. The 1988 addition features 1x1 vinyl casement windows, a 1-leaf door flanked with 1-light sidelights, a dormer, two skylights, and an exterior-end brick chimney. The final addition is recessed and is pierced with 2/2 horizontal-wood sash windows.

Other DHR Id #: 002-5045-1172

Primary Resource Information: Single Dwelling, Stories 2.00, Style: , circa 1785

Architecture Summary: Mount Ida is a circa 1785-1805 residence, moved from Buckingham County to Albemarle County in 2000-2001, especially noteworthy for its extraordinary woodwork in the west parlor. Two stories in height, this wood-frame dwelling began as a single-pile, side-passage-plan house with a larger parlor to the west of the stair passage, two smaller rooms in a single-story wing beyond the parlor, and probably another room to the east. This room was replaced by a larger, two-story, double-pile-plan addition. The hipped roof is a standing seam metal, and the foundation replicates the variations in brick pattern and color of the original location. Other details include a one-story Doric porch, nine-over-nine windows, and four interior brick chimneys.

The two-story circa 1900 I-house sits on a stretcher bond brick foundation, features weatherboard cladding, and is capped by a side-gabled slate roof with center gable. The symmetrical three-bay façade is dominated by a full-width shed porch supported by paired Tuscan columns with a central one-bay second story porch. The center bays both feature entry doors detailed with three-light-and panel sidelights, while the first story also includes a three-light transom. The façade is also detailed with 2/2 wood windows, square-edged wood surrounds, a wide fascia, cornerboards, and a boxed cornice. The center gable is clad with slate shingles and features a cross-brace across the peak. There are also interior-end brick chimneys, square balusters, a poured concrete porch floor (dated 1921), and a rear two story ell and side-gabled rear two-story addition with slate gable peak and standing-seam metal roof. There is also a two-story side elevation shed addition, a one-story shed porch, and a one-story shed addition. The dwelling is under renovation.

Clifton Inn Road

1296 Clifton Inn Road **002-0155** *Other DHR Id #: 002-5045-0044*

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1800

Architecture Summary: Summary Description - Clifton is a large, rambling two-story wood frame dwelling located on a seven-acre property off State Route 729 in eastern Albemarle County. Situated on a wooded bluff overlooking the Rivanna River, across from the extinct port village of Milton, the house is the only remaining evidence of Thomas Mann Randolph's plan to start the sister town of North Milton. Built in the first quarter of the 19th-century, the original farmstead portion is at the center of later 19th- and 20th-century Colonial Revival-style additions and alterations. Today the house stands as one of Albemarle County's finest examples of early 20th-century domestic architecture, with a core unit and five-bay facade dating to the early 1800s. The property also includes a detailed brick office (ca. 1833-45); ruins of an early 19th-century springhouse; the shaft of a 19th-century stone-lined ice house; an early 20th-century chicken coop and an altered 1920s brick garage, all associated with Clifton's early history and modern renovations., see NRHP Registration Form.

The Inn was renovated in 2004 after a devastating fire in 2003.

Built early- to mid-eighteenth century, the main block of Lennox has a rectangular-shaped footprint with side-gable roof with front-gable sections on both side elevations. This single dwelling is one-and-a-half stories and is constructed of timber frame and logs. The frame sections are clad with beaded weatherboard siding and the log section on the northeast elevation is square notched with board-and-batten siding in the gables. It rests on a brick stretcher bond foundation and the roof is sheathed with standing-seam metal. The main block contains 6/6 windows and the log section is pierced with 9/9 wood-sash windows. The hyphen to the log section contains an entry with a 2-paneled wood door with 4-light sidelights. The main block contains a central entry with a single-leaf, wood, paneled door. Covering the full-width of the main block is a shed-roof porch supported with square wood posts. Above the roof is one exterior-end, shouldered brick chimney on the main block and one central-interior chimney on the log section. The main section is adorned with two gable dormers each with a 6/6 window.

Set on a soapstone pier foundation, the two-story circa 1910 dwelling features a side-gabled standing-seam metal roof and weatherboard cladding. The three-bay façade is marked with a half-hipped screened front porch and 6/6 wood windows. Other detailing includes a rectangular footprint, an interior-end brick and exterior-end concrete block chimneys, and square-edged wood surrounds and sills with a projecting drip cap. The dwelling also features a rear shed porch, cornerboards, exposed rafter tails and aluminum siding on the front porch, and a one-story rear ell.

Architecture Summary: The dwelling was possibly enlarged from a one-room plan dwelling.

2005: The circa 1800 dwelling at Seven Oaks is a one-story wood-frame structure with a side-gabled asphalt-shingle roof, a rubble stone foundation, and weatherboard siding. The main block which features only three 4/4 wood windows across the façade, is flanked by two exterior-end brick three-course American bond double-shouldered chimneys. The rear portion of the dwelling, which was added later with the addition of an army barracks structure, is joined to the main block via a hyphen that now serves as the primary entrance, located on the side elevation. Then main block also features three rear dormers composed of a central shed flanked by gabled dormers. There are four-light attic-story windows on the gable ends. The hyphen is composed of a gabled porch supported by Tuscan wood posts, while the rear addition, which sits on a brick foundation, includes 6/6 wood windows, German siding, exposed rafter tails, and overhanging eaves.

Donegal Farm

9520 Donegal Farm **002-0241** *Other DHR Id #:* **002-5045-1098**

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: , 1806** Architecture Summary: The house at Donegal is said to have been built in 1806; it may in fact date as late as the 1840s, however.

After having burned to the ground in 1926, it was rebuilt, salvaging as much of the original walls as possible. A slightly later wing, connected to the old house by one-story frame hyphen, was modeled after local Christ Church, Glendower. See VDHR Survey File for more details.

Interior Description: The interior of the house dates entirely from the 1920s and later; the partitioning in the original section was changed from its original central passage configuration. End Interior Description

2005 Survey:

This brick structure consists of a two-and-a-half story, main block connected with a one-story hyphen to the 1920s block that appears to look like Christ Church in Glendower. The front block rests on a solid brick foundation and the walls are constructed in a 4-course American bond. This section contains both 6/6 and 9/6 wood-sash windows and a single-leaf door. Covering the full-width of the façade is a two-story porch supported with tapered Tuscan wood posts. The first story of this porch has been screened and the second story has square balusters. This block has a two-story, brick rear ell with a two-story porch. This porch has been partially enclosed with a Colonial Revival door surround with a broken pediment and a rooftop balcony with a Chippendale-style balustrade. The side-gable roof is sheathed with slate shingles. Other architectural features of this house include splayed wood lintels, square-edged wood surrounds, and a molded and raking wood cornice. Built in the 1920s, the rear block is constructed in a Flemish bond and contains 8/8 wood round headed windows with keystone surrounds. This block is also detailed with a triglyph and metope cornice and wide eaves. It contains one interior-end, corbeled brick chimney and the gables are clad with weatherboards. A brick deck is located on the rear elevation.

Dyer's Mill Lane

Dyer's Mill Lane **002-0040** *Other DHR Id #: 002-5045-1278 7369*

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Early Classical Revival, ca 1808

Architecture Summary: very Jeffersonian Roman Revival... Palladian window in gable of portico... lantern on top of roof

2005 Survey: This large brick dwelling is comprised of a three-part plan with a two story main block and with recessed one-story wings. The main block is double pile, five-bays wide on the façade, and features a large, two-story Classical Revival-style gable porch. The house is constructed in a brick Flemish bond and is pierced with 9/9 and 6/9 wood-sash windows. The front entry contains a single-leaf, wood paneled door and features a paneled reveal and a decorative transom. Each of the bays is detailed with bulls-eye corner blocks on each of the square-edged wood surrounds and sills. The first story windows have jack arch lintels and the second story has rowlock brick lintels. The porch covers three bays on the façade including the central entry. It features paired Tuscan columns and pilasters on both the first and second stories as well as a decorative balustrade on the second story. The porch tympanum contains a Palladian arched window. A single-leaf entry opens onto the balcony and contains a panel-and-lights wood door. The porch cornice between the first and second stories is detailed with triglyphs and metopes. The porch's full pediment also features large modillions. The main block of the dwelling is capped with a hipped roof, sheathed with slate shingles and features a louvered vent cap. The main block also contains two interior-end brick corbeled chimneys. A gable hyphen connects a front-gable wing on the southeast elevation. The hyphen is embellished with a bump out – the façade is a rounded window with large 6/9 full-height windows. The front-gable wing contains a Palladian window set in a recessed arch. The window surround is detailed with fluted pilasters and a dentil course with a wood keystone. This wing also features cornice returns. The northwest wing features a side-gable section with a 5-sided bay window with 18-light fixed windows. This wing contains an interior-end brick chimney. This wing attached to a secondary side-gable hyphen that connects to a front-gable, wood-frame block that also contains an interior-end brick chimney. This wood-frame section is clad with beaded weatherboard siding and is one-and-a-half stories in height. It has a shed-roof portico on the rear elevation and contains 6/6 wood windows and a 6-light awning window.

The portico may have been designed by the local architect Floyd Johnson during the 1960s.

Primary Resource Information: Single Dwelling, Stories 1.50, Style: Colonial, 1787

1970 survey: 1 1/2 story frame home over an English basement built circa 1796 is in good condition and not under any known threat.

1975 survey: Paneling in the basement dining room came from a Mr. Booth who acquired it from George Wythe's law office in Charlottesville. The original shingle roof has been replaced with tin. Mr. Johnson has collected some interesting latches, which he has put to use throughout the house. Structure, grounds and neighborhood in excellent condition. For further descriptions see 1968 newspaper article in file.

2005 survey: One-and-a-half stories and three bays wide, the main block of this wood-frame dwelling features a rectangular-shaped footprint. A one-story gable hyphen connects to a one-story, front-gable wing. The main block rests on a raised stretcher-bond brick foundation, and the house is clad with beaded weatherboard siding. It is pierced with 6/6 and 9/6 wood-sash windows and a central, single-leaf, panel-and-lights wood door with a 5-light transom. Covering the front entry is a front-gable porch supported with chamfered wood posts and a rail balustrade. Rising above the side-gable, standing-seam metal roof are two exterior-end, shouldered brick chimneys with corbeled caps. A rear shed-roof addition covers the full width of the main block. The front-gable wing rests on a brick foundation, contains a central-interior brick chimney, and has a 20-light fixed window on the facade. The hyphen is pierced with eight 1-light fixed windows and a 1-leaf door. Other architectural features include paneled wood shutters with shutter stays on the main block, square-edged surrounds, and a molded cornice.

The 50'x50' frame building is a single-story, three-bay structure covered by formal shiplap siding with quoined corners. The whole is *Primary Resource Information:* **Single Dwelling, Stories 1.00, Style: Classical Revival, ca 1796**

set upon a stucco-covered stone basement sited as to make the house two stories on the rear elevation. The hipped roof is covered with concrete shingles, imitating wood shakes, surmounted by four slender interior chimneys. 9/9, double hung sash windows with architrave trim and torus molded sills are used throughout the building's main floor. The windows are flanked by louvred shutters. The double-door front (west) entry is framed by molded architrave trim topped by a cornice, while the side entries are distinguished by double doors topped by four-light transoms. The rear (east) doorway also consists of paneled double doors topped by a multiple-light transom. Sheltering each of the entrances is a pedimented Tuscan portico that consists of Tuscan columns supporting a full entablature, the tympanum pierced by a semicircular fanlight with intersecting tracery. The north and west porticos are original to the building. A kitchen addition, visible in the 1936 Francis Benjamin Johnston photograph of the north elevation, was removed during the restoration and replaced by the present portico. At the same time a section of foundation of what was believed to be for an east portico was found and a portico was built that encloses the octagonal end. The Chinese lattice railing is conjectural.

For more information see the National Register Nomination.

2005: The main dwelling at Edgemont is a circa 1796 dwelling based on Palladio's Villa Capra. It was extensively restored/alterd by Colonial Revival-era architect Milton Grigg in 1938. It was renovated again in 1846. The main block is flanked by free-standing gabled wing dependencies connected to the main block via stone tunnels. Built into the hill, Edgemont features a one-story primary façade, hipped roof with concrete shingles, four central-interior brick chimneys, weatherboard cladding with quoins, and central gabled porticos on every elevation. The primary elevation is dominated by the gabled portico which features a closed tympanum with lunette window with decorative tracery and a central keystone, a molded cornice, and full entablature. It is supported by Tuscan columns and shelters a central double-leaf paneled entry and two 9/9 wood windows. The portico is flanked by additional 9/9 wood windows with operable louvred wood shutters. The side elevations are similarly detailed, but slightly less ornamental (these porticos were added in 1938). There are no windows sheltered by the portico, only a double-leaf door with four-light transom. There is also a Chippendale balustrade. The rear elevation, which features a raised basement, is similar as well with arched basement-level central entries and 6/6 basement-level windows. The portico porch is not accessible from the exterior, but is enclosed with a Chippendale balustrade.

Esmont Farm

7060 Esmont Farm 002-0030 Other DHR Id #: 002-5045-1480

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Greek Revival, 1816

Architecture Summary: The house is a two-story, three-bay structure built of brick laid in Flemish bond, with a white-painted water table and belt course. Each of the openings in the facade has three parts. One-light-wide, two-over-two sidelights flank the front door and each of the six-over-six-over-six, triple-hung, first-floor windows. In the second floor the sash are double-hung with six-light sash used in the end windows and eight-light sash in the central one, again with sidelights used on each opening. The side and rear windows all have eight-light sash, triple-hung on the first-floor and double-hung on the second. All of the windows and doors have stone lintels with turned corner blocks. A full-length tetrastyle porch with Roman Doric columns and entablature shelters the front of the house. This porch has been enlarged; an early twentieth-century photograph reveals that it once covered the doorway only and that the columns were paired. A full Doric entablature encircles the short ridge, further emphasized by the use of a balustrade with alternating solid and Chinese lattice panels. This balustrade appears to be an original feature; the porch balustrade is a twentieth-century copy of it and replaces an open balustrade with plain balusters. A small one-story kitchen has been added to the west side of the house in recent years.

The plan of Esmont is a variation of the double-pile, central-passage plan. In this case, the passage extends only halfway through the house. To either side of the passage are a library and a narrow stair passage running along the front of the house, with a small room (now divided into several service rooms) behind it. The rear of the house is occupied by two large rooms connected by double doors. The passage

floor is laid in a herringbone pattern similar to that in the hall of Monticello.

2005: Two stories in height and three bays wide, Esmont is laid in a Flemish bond and sits on a solid brick foundation. The central entry contains a double-leaf wood paneled door and the hipped roof is sheathed with slate shingles. Two central-interior corbeled chimneys in Flemish bond rise above the roof. The porch on the façade has been returned to its original appearance. Other features include wood louvered shutters, a rooftop balcony with a Chippendale-style balustrade, square-edged sills, a triglyph and metope frieze, and wide eaves with modillions. The kitchen addition has a flat roof, is laid in a Flemish bond, and contains an interior-end brick corbeled chimney. Across the full-width of the rear elevation is a Tuscan column porch.

Architecture Summary: The porch has a double hipped roof -- one covers the door with a transom and side lights, the other covers a door with no surround but which stands next to a projecting bay with three 1/1 windows, also covered by the porch.

2005 Survey:

Built circa 1900, this two-story, wood-frame dwelling features an L-shaped footprint with a rear two-story ell. It rests on a random rubble pier foundation, is clad with replacement siding, and is capped with a gable and half-hipped, corrugated-metal roof. The façade is pierced with 6/6 and 1/1 wood-sash windows, and two single-leaf, wood paneled doors. One of the entrances has 3-light/panel sidelights with a five-light transom. Two half-hipped porches adorn the façade, and is supported with wood posts and feature decorative cornices. Two central-interior, brick chimneys rise above the roof. The rear ell has a one story, shed-roof porch on the side elevation.

7603 Esmont Road 002-5045-1123

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Other, ca 1900**

The two-story commercial/dwelling was constructed circa 1900. Clad in asbestos-over-weatherboard siding, the building features a hipped-roof recessed main block with projecting off-center gable. The projecting gable portion includes a closed tympanum with diamond-patterned shingled peak. There is a hipped porch with Tuscan column supports that stretches across the commercial projection, which also features a central double-leaf entry with transom light flanked by canted 1/1 paired display windows. There is also a shed one-story wing on the side elevation that features a two-bay porch on the main façade, supported by chamfered posts and featuring exposed rafter tails and a single-leaf entry door. The recessed main block is characterized by a decorative two-story porch with turned posts and a spindlework screen. The building also features 1/1 and 2/2 wood windows, an interior-end brick chimney, a full entablature at the cornice, square-edged wood surrounds and sills, and a side elevation center gable.

Architecture Summary: The main house consists of a two-story, seven-bay central block, 68' by 43', with two 35' by 26', three bay, single-story wings, all built of brick laid in Flemish bond of very high quality workmanship. The whole is set upon a high basement with a stepped water table. All of the windows have sandstone lintels with "bull's Eye" paterae and sandstone sills, as well as six over six sash and louvered blinds, except for the windows flanking the central entry on either facade of the main block, which have

triple-hung, six-light sashes. The entries are treated with restrained, fluted-pilaster doorways having wooden-mullioned fanlights, central fluted keystones, and double doors. A Tuscan cornice embellishes the low hipped roofs of all three sections, each of which is surmounted by tall interior end chimneys. Both facades of the main block are further distinguished by monumental tetrastyle pedimented porticoes which shelter the three central bays. These have Tuscan columns, full Tuscan entablatures, and lunettes in their tympana, as well as original flights of sandstone stairs with scrolled bottom steps. The plan is symmetrical.

Other DHR Id #: **002-5045-1282**

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Other, 1942**

Architecture Summary: "Originally a rambling frame country home, ...the main dwelling was converted into a Spanish villa... In 1926 the redesigned...home burned to the ground, and in 1942 Dean John L. Manahan of the University of Virginia erected the present structure, designed by the noted architect, Milton H. Grigg." (HABS, 12/1/67)

2006: Set on a solid stretcher-bond brick foundation, the circa 1942 Classical Revival dwelling features a tripartite form, brick constriction, and a front-gabled slate roof with hipped wings. The central block is three bays wide with a central portico with closed tympanum, Tuscan fluted columns, decorative carved entablature, and a modillion-course cornice. The portico shelters a double-leaf entry with a five-light transom. The main block of the house also features a closed tympanum with a modillion cornice and a roundel peak window. The portico is flanked by 9/9 wood windows with operable shutters, while three similar 6/6 windows pierce the second story. One story hipped wings extend three bays with projecting end-bay gables with modillions. Each bay is fitted with a 9/9 wood window with operable shutters. A pair of interior-end brick chimneys with corbeled caps rises from the main block. Other detailing includes jack arch lintels, a brick beltcourse, round-edged sills, and a projecting watertable. The dwelling features a side elevation projecting bay window and a rear hipped porch with a Chippendale balustrade.

1979 survey: Rolling Acres is a two story random course brick building which is raised on a high basement. The building has a molded cornice with dentils and a simple gable roof with interior chimneys on the unadorned brick ends. A two story porch extends along the facade. It is raised on brick piers and has six square columns with corresponding posts above and square balusters. The double door on the first floor is framed by a three light transom. The original section which forms the facade is divided into three bays. In this section the plan was originally a hall and parlor. Around 1919, the back wing that runs perpendicular to the original house was added. Later, various alterations, mainly interior, were undertaken by W. H. Gimbert. The dog leg stair remains intact. A turned newel and corner posts and one square baluster per tread support the ramped rail. The mantels in the house are plain with pilasters holding a plain frieze and cut shelf. A chair rail and baseboard and plain trim at the openings are the only remaining woodwork. The attic was not inspected.

2004 survey: The house is constructed in a 7-course American bond and is illuminated with 6/6 wood-sash windows for the first and second stories and the basement contains 3/3 windows. The rear ell is two stories in height and wood-frame construction. It is capped with a standing-seam metal roof and is clad with weatherboard siding. Resting on a brick foundation, the rear ell has a concrete-block, central-interior brick chimney. The rear ell features 3/3 windows, 1-light casements, and 3-light awning windows.

Primary Resource Information: Single Dwelling, Stories 1.50, Style: , 1840

Architecture Summary: Christmas Hill is a one-story house with finished loft, but no basement; the house rests on rubblestone foundations. Exterior end chimneys of five course American bond brick rise at either end of the house, heating rooms on both floors. The loft was originally lighted by only a pair of small four-light windows at either gable end, but a central rear dormer was added some time in the 20th century. Although the house features a central-passage plan, the openings are not disposed with perfect symmetry; one room is slightly larger than the other, as in the traditional hall-parlor house. Original sash, now gone, probably of the six-over-six variety., per intensive survey.

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, 1787

Architecture Summary: The Rectory stands on a sixty-one acre parcel of property on both sides of secondary State route 712 west of its intersection with secondary State route 713, one mile east of Keene in southern Albemarle county. The main house was built in four stages. The brick basement of the eastern half of the house is believed to be the foundation of Dyer's store, an important late-eighteenth-century mercantile establishment built shortly after 1787. The two-story, three-bay, gable roofed, frame house with end chimneys, center-pedimented portico, simple cornice, and stone basement dates from 1848. It features six-over-six sash with simple Greek Revival surrounds, a center door with transom and sidelights, and a single pile/central hall interior plan. Much of the original woodwork, including stairs, mantels, and window and door trim, remains. A two-bay wing to the north also dates from 1848. In the early part of the twentieth century, an addition on the north was built to house the kitchen and a sleeping porch, while in the 1920s a one-bay extension added bathrooms and a sitting room. Also on the grounds are five contributing outbuildings: a one-story frame house that served as the rectory office, two sheds, a barn, and a small frame tenant house. Noncontributing resources include a swimming pool and adjacent well house., per NRHP Registration Form.

2005: This house is capped with a side-gable, asphalt-shingle roof and is clad with weatherboard siding. The portico is supported with Tuscan posts and the chimneys are corbeled. Previous description was accurate at the time of the survey.

Other DHR Id #: **002-5045-0639**

Primary Resource Information: **Church, Stories 1.50, Style: Early Classical Revival, 1832**

Architecture Summary: Set in woods in the rolling farmlands of lower Albemarle County, this compact church is built in the Roman Revival style popularized by Thomas Jefferson. Constructed in temple-form without portico, the church is surrounded by a full Doric Entablature with pediments at each end containing lunette windows. The entrance front, located on the east end of the building, is divided into two shallow recessed panels, each containing a doorway. Both doorways are hung with their original pairs of paneled doors and are topped with semi-circular arches set with louvered fans. Between the top of each doorway and the entablature is a glazed lunette window which serves to light the interior gallery. In fashion similar to the front, both sides of the building are divided into three shallow recessed panels, each of which contains a semi-circular arched window with a louvered fan in the top portion. These louvered fans over the windows and doors were installed in 1958, and replace early horizontal louvers. All of the walls are laid in very even Flemish bond with thin mortar joints and have suffered no significant repairs. On the rear of the church is a small frame vestry that is a later addition.

2005 Survey:

The church is two bays wide on the facade and three bays deep and is capped with a front-gable, standing-seam metal roof. Each bay on each elevation of the church is set in a shallow recessed panel. The surrounds on each of the doors and windows are molded and feature wood keystones. The windows contain 8/8 wood sashes. The Doric entablature contains triglyphs and metopes. The church also features a brick watertable, typical of masonry buildings of this period. A wood-frame addition, built circa 1848, is located on the rear elevation. This section is set on a random rubble pier foundation and is clad with weatherboard siding and features one interior-end brick chimney. A plaque on the church reads "Christ Church, St. Anne's Parrish, 1832." The brick mason for the church was William B. Phillips and the builders were J. Walker and J.W. Widderfield. The architect was Floyd Johnson. In 1991 new floors were put in the church.

Resting on a solid random-rubble foundation, this wood-frame I-house is capped with a side-gable, corrugated-sheet metal roof. It rises two-stories high and is three bays wide on the façade. The walls are re-clad with asbestos shingles and the façade is pierced with 2/2 wood-sash windows. The one-story, hipped porch covering the façade is supported with turned wood posts. Features of the house include square-edged surrounds and a concrete porch floor. A one-story, gable addition on the rear does not compromise the integrity of the house.

This was originally the Green Creek School. It is depicted on the 1928 Pitner Map. One story high and three bays wide, this school house (now residence) is wood frame with a hipped roof sheathed with standing-seam metal. It rests on a solid parged foundation, is clad with vinyl siding, and is pierced with 9/9 wood-sash windows on the side elevations. It originally was six bays deep and now has a front-gable addition on the facade and an addition on the rear elevation. The facade is pierced with metal jalousie windows and 6/6 wood-sash windows. There are two interior brick chimneys and one exterior cinder-block chimney on the house. The porch on the facade is one story high and three bays wide with a flat roof and square wood posts. A circa 1950 addition is located on the side elevation and is capped with a shed roof.

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1850

Architecture Summary: Ennecorothy is an antebellum Piedmont plantation complex set within 100 acres of fields, woodlands and park like grounds in the scenic countryside of southern Albemarle County. The focal point of the property is an 1850 Greek Revival Plantation house noted for its fine proportion and brickwork. Originally a two story, L-shaped house, the dwelling was enlarged ca. 1856 by the addition of three one-story wings. The interior preserves much original, though relatively plain, Greek Revival woodwork. The house replaces an earlier frame plantation dwelling begun in 1784 and burned in 1839. Three antebellum outbuildings and four farm buildings, probably built in association with the earlier dwelling, survive on the grounds. One of the farm buildings in an unusually well-preserved early 19th century barn. Also on the grounds are several contributing early 20th century farm buildings. Of particular interest are the handsome grounds surrounding the main dwelling. A total of 15 contributing and 3 non-contributing buildings and 1 noncontributing structure are located within the nominated area. The park is a contributing site. (See NRHP nomination form for more details).

The brick bond below the water table is 5 course American bond with Flemish variation.

2005: Constructed circa 1850, the Greek Revival dwelling is constructed of stretcher brick on the façade with five-course Flemish bond on the side elevation. The two-story symmetrically fenestrated dwelling features a hipped-roof main block with one-story half-hipped wings and a rear half-hipped addition. The roofs are slate shingled. The three-bay-wide façade features a one-story portico with paired fluted Tuscan columns and a roof balustrade that shelters a double-leaf paneled entry. The entry door features a four-light transom and three-light-and-panel sidelight. The porch is flanked by tripartite windows features a central 6/6 with 2/2 sidelights. There are molded surrounds with a square sill and backband, operable louvered shutters, and paneled spandrels. The second story is pierced with similar windows that flank a central tripartite double-leaf glass-paneled door with 2/2 sidelights. The half-hipped wings also each feature a single example of the same window configuration. Additional detailing includes a molded boxed wood cornice with a wide fascia, arched eyebrow dormers on the side and rear elevations of the main block, and a roof balustrade. There are four interior-end brick chimneys on the main block and three interior-end brick chimneys on the additions. The wings each

feature side elevation full-width hipped porches with Tuscan columns. The rear modern addition is a two-level addition with hipped roof, Chippendale roof balustrade, Tuscan columned porticos, and basement level entries. A terrace is located off the rear elevation.

1980 survey: Coleswood is a circa 1902 Georgian Revival two-story, central passage double-pile frame house, in good condition and under no apparent threats. It is square in plan, three-bays per side, with a small extension on the east side and a large family room addition across the rear. The 6/6 sash windows and interior brick chimneys are symmetrically placed. The house has a hipped asphalt shingled roof with central gables at the front and rear, each pierced with a semi-circular vent. The weatherboards are painted white, the louvered shutters green. A veranda stretches across the south entrance facade and continues along part of the west side. The main door is at the center of the entrance facade and opens onto a central hallway; this door and the tripartite window above are each surmounted by an elliptical fanlight.

2005 survey: Two stories high and three bays wide, the original wood-frame, single-dwelling features a square footprint. It rests on a concrete parged foundation and is capped with a hipped, slate-shingle roof with center gables on both the front and rear elevations.

A two-story, flat-roof addition is located on the rear elevation. The exterior walls are clad with weatherboard siding and the façade is pierced with 6/6 wood-sash windows along with a tripartite window on the second story that contains a 6/6 flanked by 2/2 wood-sash windows and topped with a fanlight transom. The façade contains a central, wood, paneled/lights, single-leaf door with 3-light sidelights and a fanlight transom. The façade also features a wrap-around porch supported with Tuscan posts. The original block features two central-interior, corbeled brick chimneys. Other architectural features of the main block include a molded wood cornice, a half-round louvered vent in the center gables, a wood fascia board, molded wood surrounds, square-edged sills, and overhanging and boxed eaves. The rear addition, c. 1940, rests on a concrete-block foundation and contains a screened sleeping porch on the second story, which was added later as a sunporch. The addition has one exterior-end brick chimney on the northeast elevation. It was originally one story and was extended with the second story addition.

One story high, this wood-frame ranch house features a long rectangular-shaped footprint. It rests on a poured concrete foundation and the walls are clad with a combination of vertical-board siding, weatherboards, and Permastone. It is pierced with 2-light sliding windows, 1-light fixed windows, 2/2 horizontal, wood-sash windows, and 1/1 wood-sash windows. It has two single-leaf wood, paneled/lights doors and one roll-up garage doors. The house is capped with a side-gable roof with the southwest elevation as a hipped roof section with a gable on the façade. Rising above the asphalt shingle roof is one central-interior chimney clad with Permastone. This house features overhanging eaves and thin, square-edged surrounds and sills.

Architecture Summary: Original house is 5-bays, 2-stories with flanking chimneys. 2-story pedimented porch has a Chinese lattice railing. The grounds are overgrown and the house is deteriorating.

2004 Survey: This large, early Classical-style, single-dwelling features a Palladian five-part plan with a two-story, five-bay wide center block. The recessed side blocks are one story in height and each section has a side-gable, slate-shingle roof and rests on a random rubble foundation. The westernmost one-story block has been demolished and all that remains is the stone foundation. The exterior walls are clad with beaded weatherboard siding and many of the windows are boarded over or are missing window panes. The wood-barred basement windows are 3/3 wood-sash and the first and second story windows contain 9/6 and 9/9 wood sashes. The central entry on the façade contains a boarded over two-leaf, paneled door with a fanlight transom. The façade is embellished with a two story, one bay, gable portico supported with paired wood Tuscan columns. The second story of the portico features a Chinese Chippendale balustrade. The main block has two exterior-end brick chimneys and the two slightly recessed one-story wings have one exterior-end brick chimney. The smaller one story block on the far end has one interior-end brick chimney. The exterior-end chimneys are have multiple flues, have arched chimney hoods over each flue, and are shouldered, and constructed in a Flemish bond. The rear elevation of the main block contains three single-leaf doors, each are boarded. Other architectural features include brick nogging, boxed wood cornice, cornerboards, molded surrounds and sills, and a closed tympanum with a lunette in the portico.

2004 Survey: Two-and-half stories in height and three bays wide, this wood-frame dwelling features a rectangular-shaped footprint with a recessed wings on the side elevations. The main block dates to 1796 (and may have an earlier section) according to a date brick and the east wing dates to 1832 and finally the west wing was built in 1948. The house rests on a Flemish brick bond foundation and the exterior walls are clad with weatherboard siding. The façade is pierced with 9/9 wood-sash windows and a single-leaf, batten, paneled Dutch door. The side elevations of the main block feature a lancet arched vent in the attic story. Covering the front entry is a gable portico supported with fluted Tuscan posts and features a closed tympanum. Above the side-gable, slate-shingle roof are four exterior-end, corbeled brick chimneys constructed in a Flemish brick bond. Adorning the façade of the main block are two gable dormers each with one 6/6 wood-sash window. The rear elevation of the main block has three hipped dormers and a one-story, shed-roof, screened porch with a Chinese Chippendale balustrade and a brick arched foundation. The 1832 addition is one story in height, three bays wide, and rests on a random rubble foundation. This section has one exterior-end, corbeled brick chimney and is pierced with one 6/6 window and two 9/9 windows. There is a small non-historic addition on the end elevation of the 1832 addition. This section is three bays wide and has a rear central entry. The west wing constructed in 1948 is one-and-a-half stories in height and three bays wide. It contains 6/9 wood-sash windows. Other architectural features of the house include molded surrounds and sills, a wide fascia board on the original block, boxed eaves, and operable louvered wood shutters.

2005:
Two-and-a-half stories in height and five bays wide, the original wood-frame Neoclassical dwelling features a square-shaped footprint. A one-story hyphen leads to a hipped-roof, three-car garage off the rear elevation. This addition was built by Cowles around 1988. Set on a solid brick foundation, this house is clad with German weatherboard siding and is pierced with 6/6 wood-sash windows and a double-leaf paneled wood door. Sheltering the full-width of the façade is a full-height porch supported with Tuscan wood columns. The house is capped with a hipped asphalt-shingle roof and there are four interior-end brick chimneys that rise above the roof, two on each side elevation. The front door is illuminated with an elliptical transom and 3-light/1-panel sidelights. The central double-leaf door on the second story on the façade has a bowed balcony with square balusters and panel-and-lights doors. This doorway also contains an elliptical transom and same sidelights. The façade also features a center cross gable, which contains an arched multi-light window. The side elevation features a two-story enclosed porch. This porch is recessed from the façade and is capped with a half-hipped roof. The house features wide eaves, a denticulated cornice, a molded cornice.

2005: The modest two-story, three-bay Greek Revival main house on Hatton Grange Farm was built in 1839. The facade is laid in a Flemish brick bond and the other elevations are constructed in a five-course American bond. It is pierced with 6/6 vinyl-sash windows and a double-leaf wood paneled door. The entrance is illuminated with 4-light sidelights and a 5-light transom. A flat-roof portico, covering the central entry, is supported with Tuscan columns and features a rooftop balcony with turned balusters. The main block of the house has two interior-end brick corbeled chimneys rising above the side-gable, slate-shingle roof. The wings also feature two brick interior chimneys and a standing-seam metal gable roof. The wings are one-story and are laid in a 7-course American bond and feature a corner stepped parapet. The rear elevation of the main block has an glazed shed-roof porch on a brick pier foundation and featuring large turned balusters. The non-historic addition on the west side has five sides and is laid in a 5-course American and has one interior-end brick chimney. Other architectural features of the house include molded cornice returns, lug wood lintels with projecting wood corner blocks, and a wide fascia board.

Other DHR Id #: **002-5045-1298**

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Italianate, 1832**

Architecture Summary: High Meadows is located on Route 20 less than one-half mile from Scottsville, Albemarle County on a 19.798 acre tract of land. It consists of a one-and-one-half-story brick dwelling built between 1831 and 1832, and a two-story, 1883 stuccoed brick section. The 1883 additions more than tripled the size of the original dwelling and is connected by a frame, single-story passage which runs between and the length of both sections. This passage is the most distinctive feature of the house and the only known example of its type and period in Albemarle County. The nominated property contains one contributing building, the main residence., per NRHP Inventory - Nomination Form. End Architecture Summary Additions and alterations: End Additions and alterations Interior Description: End Interior Description

2005:Two stories in height and three bays wide, this wood-frame dwelling features several construction phases the first dating to 1832 and the second dating to 1882. The 1882 section was added onto the front elevation and now serves as the primary façade. Set on a solid stuccoed foundation, this wood-frame dwelling is clad with stucco and is pierced with 2/2 wood-sash windows. A flat-roof portico supported with square wood posts shelters the central entry. The porch has a rooftop balcony, a decorative cut-out balustrade, and sits on a brick pier foundation. The side-gable roof is sheathed with slate shingles and features a central cross gable. Rising above the roof are two central-interior brick chimneys each with a corbeled cap. A one-story hyphen connects each of the two sections. The 1832 block is one-and-a-half stories and is constructed in 5-course American bond. It has a side-gable, wood shingle roof and two exterior-end brick shouldered chimneys. A shed-roof porch on brick piers is enclosed. Other features of the house include a raised basement, square-edged window and surrounds and sills, and louvered wood shutters.

1810 Irish Road 002-5045-1309

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1900**

The owner claims this building was constructed circa 1850.

Two stories in height, this wood-frame dwelling features a complex footprint having undergone numerous alterations and additions. The foundation was not visible at the time of the survey. It is clad with vinyl siding and is pierced with 2/2 wood-sash windows and a single-leaf door. Covering the entry is a flat-roof portico supported with Tuscan wood columns. It appears a roof-top balcony on the portico has been removed. A single-leaf door on the second story opens onto the portico on the facade. The house is capped with a gable roof sheathed with standing-seam metal with cornice returns. The façade features a center cross gable and a three-sided bay typical of the Queen Anne style. Above the roof of a one-story gable addition on the rear is one interior-end brick chimney. A two-story ell and a gable addition are located on the rear elevation. A shed-roof sun porch is located across the rear elevation of the addition.

Primary Resource Information: **Commercial Building, Stories 2.00, Style: Commercial Style, ca 1940**

The two-story commercial building is constructed of concrete block and capped by a side-gabled standing-seam metal roof. Constructed circa 1940, the building features 6/6 wood windows, a central double-leaf vertical-board door, a central-interior brick chimney, and a concrete block shed addition. The structure is dominated by a projecting porch enclosed in weatherboard and supported by wood posts on brick piers. The ground level forms a porte-cochere. The porch features four open bay windows across the façade and two on the sides. The shed addition is partially clad in asbestos shingles and features exposed rafter tails, a shed one-story addition, a single-leaf entry and six-light windows. A rear shed addition is also part of the addition.

Primary Resource Information: **Single Dwelling, Stories 1.00, Style: Other, ca 1799**

Architecture Summary: Ash Lawn is an example of a simple late-eighteenth-century cottage with mid-nineteenth-century additions to the west. The original portion of the house is three bays long, three bays wide and one story high. It is joined to a mid-nineteenth-century two-over-two central hall addition by a short wide hall serving as a parlor, which may be a portion of the original wing of the house. This mid-nineteenth-century addition is clad in weatherboard with a gable roof (metal, standing seam) and a 2-story, 1-bay portico entrance with modified Tuscan columns. It has two interior end brick chimneys, 6/6 sash windows, and a single leaf entrance door with a transom and sidelights. There is a second-story balcony above the entrance door with a single leaf door also with a transom and sidelights. (NRHP Nom 12/72)

Like many old houses, this structure appears to have been added to extensively over the years. The original nucleus of this house appears to have been a small rectangular pile contiguous to the stone chimney. This original pile was extended to the south, completing the main longitudinal mass of the house. Sheds were added to the front and rear of this mass, having roofs of shallower pitch. Subsequently, a large dormer was added on the front of the house, creating a large room out of the upstairs loft. Further additions apparently occurred on the southeast corner, completing the present form.

It sits on a solid foundation, not visible from the exterior, and the wood-frame walls are clad with beaded vinyl siding. The side-gable roof is sheathed with asphalt shingles and the façade is pierced with 1/1 and 6/6 wood-sash windows. A shed-roof porch has been added to the façade and is supported with brick posts. There is one exterior-end stone chimney, one exterior-end brick, shouldered chimney, and two central-interior brick chimneys. The gable dormer on the façade is clad with vinyl siding. Other architectural features include aluminum-clad surrounds and sills, a boxed cornice and eaves, a rear shed addition and a rear gable-roof ell.

James River Road

James River Road 002-0442 Other DHR Id #: 002-5045-1562

Primary Resource Information: Single Dwelling, Stories 1.50, Style: Other, ca 1820

1975: The north wing is the earlier wing consisting of two rooms with 1/2 story above, and basement beneath. The stair originally ascended from the north room on the inside wall but was altered when a shed addition was added some 20 years ago.

The smaller 1 1/2 story wing of one room over one room with shed addition was connected by a causeway (perhaps originally a kitchen?). The chimney on this wing has been rebuilt recently by Mr. Adcock of Buckingham, a mason. The wainscoting in the north room of the early wing is unusual, being higher and capped with a Chippendale frieze. Raised panel doors upstairs with H-L hinges and leather grommets. The one chimney which may be original is laid in common bond. Some original sash. The one remaining mantle piece in the north wing looks like a Victorian rendition of a 17th century mantle piece.

This circa 1745 house is presently in fair condition and under restoration.

1978: The plantation dwelling consists of two early sections: a hall-parlor section and a one-room plan section connected to the former by a 20th century hyphen. The latter section may have originally been a detached kitchen. Section I is frame with beaded weatherboarding, 1 1/2 stories; rubblestone basement with later brick and cement block patching); 3-bay front; hall-parlor plan; gable roof with one front shed dormer; one remaining exterior chimney on west end (American bond, rebuilt). Section II: frame; rubblestone basement with fireplace that is now closed; one bay front; one room plan; gable roof with finished loft; exterior end chimney on east. The house was built ante 1825, possibly late 18th century.

Interior: all trim in the house appears to date to the same period (ca. 1815-1830). Plain board dado with vertically-reeded chair rail. Federal mantel with recessed panel pilasters and segmental arch. Similar but simpler Federal mantel in one-room plan section.

Federal architrave casings at openings; 6-panel Federal doors; 6/6 sash windows.

Architecture Summary, 1981: The most complete interior trim remains in the west parlor of the original block, which was probably Re-trimmed in the 1830s. Plain horizontal-board wainscot with a vertically-reeded chair rail surrounds the room. Trim in east room removed. An enclosed winder stair, straightened ca.1955.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Other, ca 1840**

Two-stories in height and three bays wide, this wood-frame dwelling features a T-shaped footprint with the compilation of several additions. The original section of this dwelling appears to be a three-bay block with a central-entry, and two exterior-end brick chimneys. During the late nineteenth century, it appears a one-bay, two-story addition was construction on the west elevation with a 2-story, 3-sided bay on its side elevation, and a centrally located, 5-sided, bay addition was added to the second story of the façade above the central, half-hipped roof porch. A side-gable, two-story addition was added to the east elevation circa 1999 according to the tax assessment. Resting on a brick pier foundation with brick infill, this house is wood-frame and is clad with weatherboard siding. The front portico is supported with square wood posts and square balusters. The façade is pierced with 2/2 wood-sash windows with 1/1 wood-sash windows in the front projecting bay on the second story. Rising above the side-gable, asphalt-shingle roof is one central-interior, brick chimney, and two exterior-end brick chimneys, each of them with corbeled caps. The 1999 addition contains a secondary entry on the façade, 6/6 wood-sash windows, and an enclosed exterior stair on the north elevation. Other architectural features of the house include molded wood surrounds, square-edged sills, louvered wood shutters, cornerboards, overhanging eaves, and a boxed cornice.

Other DHR Id #: **002-5045-0544**

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Georgian, ca 1760**

This Georgian-style dwelling is constructed of timber frame and is comprised of a typical three-part Georgian footprint with a two-story rectangular block flanked by recessed, one-story wings. A rear ell is in the process of construction (8/2004). The dwelling rests on a solid brick foundation, the walls are clad with weatherboards, and the side-gable roof is sheathed with asphalt shingles. The façade is pierced with 6/6 wood-sash windows and the central, double-leaf, two-paneled wood door is covered with a gable portico. The portico features Doric columns and pilasters. The house contains two exterior-end (partially interior) brick, corbeled chimneys. The house also is adorned with a heavy denticulated cornice including the porch. Other architectural features include cornerboards, square-edged surrounds, and the rear door is illuminated with a 5-light transom. The interior retains some of its original paneling and there are hand wrought nails visible. The first and second floor window casings feature corner blocks with pilasters. Throughout the interior a Greek Revival update is apparent. Oral history claims this building was a tavern.

Historic Virginia excerpt: The frame residence with slate roof built prior to 1760 contains ten rooms and two baths with water furnished from a never-failing spring by a hydraulic ram, is located in a beautiful grove overlooking the place and the surrounding country. The outbuildings consist of tenant house, barn, old cottage, corn-crib, and other small buildings.

Architecture Summary, 1967: Two story frame dwelling that is in very good condition.

1984 survey: House is late 18th or early 19th century; currently vacant. Hipped gambrel roof, with late 19th century slate. 3

American bond chimneys that are painted red. Federal style moldings; 9/9 sash windows.

2005:Constructed circa 1760, the wood-frame dwelling at Locust Hill sits on a Flemish bond brick foundation and is capped by a hip-on-gambrel slate roof with fish-scale shingles. Clad in weatherboard, the 1.5-story dwelling features symmetrical fenestration, exterior-end shouldered brick chimneys with three-course American course bond, and a two-story gabled ell. The five-bay-wide façade features a central single-leaf 6-panel door flanked by 9/9 wood windows. The gambrel roof portion of the façade features four gabled wall dormers with 6/6 wood windows. A one-story hipped porch is a three-bay structure with paneled Tuscan posts, a molded entablature, and a dentiled cornice. A modillion course marks the main façade's raking cornice. Other detailing includes molded window surrounds, a circa 1900 ell, and a recessed circa 1900 gabled wing addition. The dwelling was about to be restored in 2005.

Architecture Summary: large mass, very little ornamentation.

2006: Jefferson mill, constructed circa 1800, was constructed on the Hardware River by Peter Field Jefferson; grandnephew of Thomas Jefferson. The 2.5-story 5-course American-bond brick mill is three bays wide and capped by a side-gabled slate roof with boxed wood cornice. Set on a stone foundation, the mill features 6/6 wood windows with molded surrounds, square-edged sills, and single-leaf vertical-board shutters. The central single-leaf vertical-board door is sheltered by a shed overhang with chamfered brackets. The attic-story is pierced with a lunette window. Converted to a residence, the rear elevation also features a rooftop deck with iron balustrade and wood pergola, as well as roof skylights. There is a concrete-capped rear deck.

Constructed circa 1939, the two-story main dwelling at Kenwood is a front-gabled Colonial Revival structure with small recessed flat-roofed wings. It is constructed of painted brick and capped by a slate roof. The symmetrical three-bay-wide façade features a central entrance with elaborate Colonial Revival-style surround that features a swan's neck broken pediment with central artichoke motif, fluted pilasters, and transom light. The façade also features 6/6 and 4/4 wood windows and a closed tympanum with oval light detailed with decorative tracery. The dwelling also features a central cupola and two central-interior and two interior-end brick chimneys. The windows feature rowlock sills and soldier lintels, while a rowlock brick watertable also details the structure. The dwelling measures seven bays deep. The flat-roofed one-story wings are detailed with a projecting brick cornice.

Architecture Summary: The gable roof, now covered in sheet metal originally had wood shingles. The entrance is distinguished by a single story pedimented porch on wooden posts. The raised door is flanked by sidelights and architrave trim. The windows are flanked by louvered shutters.

End Architecture Summary Additions and alterations: *End Additions and alterations* Interior Description: The doors open into a center hall with quarter turn stairs, and a square newel and two square balusters per tread supporting a turned rail. All of the rooms have random width pine floors, raised panel doors with box locks. The west room has wainscoting consisting of a single panel along each wall with a chair rail and high baseboard. The windows are flanked by fluted pilaster above pedestals that break forward from the plane of the wainscoting. The mantel (4'8" x 4'5") has paneled pilasters and a frieze with a center panel and paneled endblocks. The high stacked shelf with cavetto breaks forward at the center and ends. The east room is surrounded by a high baseboard and a chair rail. The mantel (5'2 1/2" x 6'4") has molded and channeled pilasters on pedestals. The frieze with center rectangular panel and plain end blocks is surmounted by stepped bed molding which breaks forward at the center and ends.

Interior Description: End Interior Description

2005:
Two-and-a-half stories in height, this brick dwelling features an L-shaped footprint with a rear gable ell and a one-and-a-half story addition on the northwest elevation and a one-story wing on the opposite elevation. The main block is four bays wide and the one-story wing is three bays plus a projecting front-gable section with an exterior chimney. This house is set on a solid brick stretcher-bond foundation, laid in five-course American brick bond, and is pierced with 12/12 wood windows and single-leaf wood leaded stained-glass door. Sheltering the single-leaf entry is a gable one-story portico supported with fluted Tuscan paired columns. The porch features a full pediment with dentils and a molded cornice. The house is capped with a side-gable slate-shingle roof and two exterior-front chimneys and one interior chimney, both brick and corbeled, rise above the roof. The entry is illuminated with leaded sidelights over 1-panel and above is an elliptical leaded transom. The entry is also detailed with a brick arched lintel. The windows feature jack arch lintels and rounded wood sills. The house has a denticulated cornice on the façade and on the full pediments exhibited on the side and rear elevations. The one-and-a-half addition contains a sun porch with arched bays each with a fixed 1-light wood window. This block also has five gable dormers. Other features of the house include a brick water table, cornice returns, and a brick stringcourse.

Resting on a solid random-rubble foundation, this wood-frame dwelling rises one-and-a-half stories and is capped with a side-gable roof sheathed with standing-seam metal. The walls are clad with weatherboard siding and the façade is illuminated with 6/6 wood-sash windows. Covering the single-leaf entry is an inset, shed-roof porch supported with stone veneer posts and feature exposed rafters. The main block has two exterior-end, stone chimneys with brick shafts. Rising above the roof on the rear elevation of the main block is one gable dormer with a 6/6 wood-sash window. The gables of the main block contains a 6-light wood-casement window. A shed-roof addition is located on the rear elevation of the main block. A circa 1990 wing rising one-and-a-half stories high sits on a stone foundation and is clad with weatherboards. This section has 6/6 wood-sash windows with molded wood surrounds and a gable dormer on the rear elevation. A small hyphen connects the rear ell to the circa 1990 addition. There is a one-and-a-half story ell on the rear elevation with a gable dormer on both side elevations. This ell features overhanging eaves and exposed rafters. A half-hipped, sun-room addition and a screened porch wraps-around the rear ell and sits on a stone foundation.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Greek Revival, 1840**

Two-stories high, and three bays wide, this brick Greek Revival dwelling sits on a solid brick foundation, has an L-shaped footprint, and is constructed in a five-course American bond. Rising above the hipped, standing-seam metal roof are three interior-end brick chimneys, each with corbelled caps. The façade is pierced with 6/6 wood-sash windows and the basement windows are 6/6 vinyl-sash windows. Covering the single-leaf, six-paneled wood door is a flat-roof portico supported with paired, paneled Tuscan wood posts. Illuminating the central entry is a five-light transom, and three-light sidelights over dado panels. The molding for the entry features bulls-eye blocks. The balustrade for the portico is a cross-braced wood railing. The house is further defined with a recessed one-story wing with a roof-top, cross-braced balustrade. This section may have originally been a porch, which has since been enclosed with 6/6 vinyl-sash windows with arched surrounds. A kitchen addition constructed in five-course American bond brick was built circa 1990 on the rear elevation. A screened porch with paneled posts and pilasters is located across the rear elevation.

Montalto Loop

1400 Montalto Loop 002-1053 Other DHR Id #: 002-5045-1587

Primary Resource Information: **Single Dwelling, Stories 1.50, Style: Other, 1905**

Architecture Summary: "Repose" was erected between 1905 and 1915 by unknown Philadelphia architects and mechanics according to the specifications of the first owner, James Addison Patterson. The suburban residence's lack of ornamentation, particularly on the exterior, demonstrates the architect's concerns for convenience, practicality and comfort rather than for display. The steep roof serves to shed snow in the winter, and the long porches provide the comfort of shade in the summer. Although the design of the house reflects the ease of modern living and convenience, the house plan also indicates the influence of the Colonial style, from the double dormer windows on the east façade to the chair rails which run along the walls of every major room in the house. Architecture Summary.

Interior Description: The imposing 15' x 20' hall on the first floor contains the original dark red imported tile floor, as well as wood paneling, a dentiled ceiling cornice, and well-preserved stairway. The hallway connects with both the living room and the dining room by means of double paneled sliding doors. The living room, at the south end of the first story, is 20' by 30' with wooden window curtain cornices, chair rail and a fireplace whose dentiled cornice matches that at the ceiling, but further embellishes the scrolls at either end of the mantel. The dining room, 20' by 25', has the same chair rail and cornice detail of the other main rooms on the first floor, as well as built-in china closets. At the south end of the second floor is the master suite. There are four other bedrooms on this story. End Interior Description.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1853**

Architecture Summary: Monticola, A three-story, eight-thousand-square-foot, James River plantation house in Howardsville, Virginia, represents one of the finest examples of Greek Revival architecture along the James River. The house is situated on forty of its original 791 acres at the top of a small mountain to the north of the Village of Howardsville, at the base of Mount Alto. The estate rests in a park-like setting of rolling hills, open pastures, dense woods, and manicured lawns. Built in 1853 as the residence of Mr. and Mrs. Daniel James Hartsook, the house retains much of its original appearance, and includes several original outbuildings. From the cupola atop the house one has a panoramic view of the estate and the surrounding countryside, which includes three counties: Albemarle, Nelson, and Buckingham, and, in the distance, the hazy outline of the Blue Ridge Mountains. The nominated area includes four contributing buildings--a severely altered dependency and a modern one-bedroom guest cottage.

For more information see the national register nomination. In 2006 it was being restored.

002-0054

Other DHR Id #: **002-5045-0166**

Primary Resource Information: **Single Dwelling, Stories 2.50, Style: Federal, ca 1821**

Architecture Summary: The two-story main block at Morven is five bays long and two bays wide. The two-story, three-bay wing on the north is both narrower and lower than the main block.

2005:Main House

Set on a solid Flemish bond brick foundation, the Flemish bond Federal/Roman Revival-style dwelling at Morven was designed ca. 1821 by architect Martin Thacker. The two-and-a-half story five-bay structure features a side-gabled slate roof, 6/6 wood windows, a double-leaf entry door set beneath a fanlight with keystone, five exterior-end brick chimneys, and a one-story three-bay porch with Tuscan column supports (plaster over brick) and a closed tympanum. The roof features three hipped dormers. Other detailing includes a molded wood cornice with modillions, operable louvered wood shutters, penciled mortar joints, paneled door jambs, and jack arch brick lintels. A slightly recessed two-story side-gabled wing was added ca. 1920 to the side elevation. The three-bay wing features 6/6 wood windows and a gabled portico. The house was updated in the early 1900s by architect Howard Sill of Baltimore. The property is now owned by the UVA Foundation, given by Kluge.

Two-and-a-half stories and three bays wide, this wood-frame dwelling features a rectangular-shaped footprint. The original block of the house was one-bay wide and is the northernmost section. A second and third addition (both two stories) were added to the southwest elevation. A one-story, shed-roof addition stands on the rear elevation. Sitting on a pier stone foundation with parged infill, this house is clad with weatherboard siding and contains 6/6 wood-sash windows and a single-leaf wood door. Covering a portion of the façade is a wrap-around porch supported with square wood bracketed posts. The house is capped with a side-gable, slate-shingle roof and one exterior-end brick corbeled chimney and one interior-end parged chimney rise above the roof. Other architectural features of the house include square-edged surrounds, parged porch foundation, a screened porch on the rear elevation, overhanging eaves, and a boxed cornice.

Mount Warren Lane

1745 Mount Warren Lane **002-0239** *Other DHR Id #: 002-5045-1046*

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Gothic Revival, ca 1875

Architecture Summary, 1978: The building has a rear ell which has the interior chimney. This chimney may originally have been an exterior one.

2005: The circa 1875 three-bay single-pile wood-frame I-house is constructed on a random rubble stone foundation, features Hardiplank siding, and is capped by a side-gabled standing-seam metal roof. The symmetrically fenestrated dwelling also presents a side-gabled one-story wing and a two-story rear gabled ell with shed porch and side-elevation shed entry. Detailing includes two exterior-end shouldered brick six-course American bond chimneys on the main block and a central-interior brick chimney on the ell. Other details include a full-width shed porch on brick piers with a center gable and turned posts, a central single-leaf paneled-with-lights door, 6/6 wood windows, fixed louvered vinyl shutters, a boxed wood cornice, and a wide fascia.

Primary Resource Information: Church, Stories 1.00, Style: Colonial Revival, 1900

1978: Architecture Summary: The windows are round-headed with polychrome (red and blue) textured glass with tracery divisions. This motif is also carried out above the front entrance door.

2005: One story in height and three bays deep, this wood-frame church rests on a solid brick stretcher-bond foundation, is clad with vinyl siding, and is pierced with stained-glass windows. The windows are lancet-arched and are double-hung sashes. The façade is pierced with a double-leaf, 5-panel wood doors with a rounded doorway. The entry has a stained glass transom with arched lights. The front-gable roof is sheathed with standing-seam metal. There is one exterior-side, brick with a corbeled cap. A gable hyphen on the side elevation connects a one-story addition which is three bays wide. The hyphen has one exterior-side chimney. The gable addition contains 3/1 windows and rests on a concrete-block foundation. This addition appears to have been built circa 1930. Other architectural features of the church includes a boxed cornice and overhanging eaves.

Set on a solid parged concrete foundation, this house is clad with beaded weatherboard siding and is pierced with 6/6 wood windows and central single-leaf replacement door. The façade is detailed with a Neoclassical screened porch two-stories in height and across the full-width of the house. It is capped with a projecting front-gable and half-hipped roof and is supported with Tuscan wood posts and set on a brick foundation. The porch is detailed with a full pediment, triglyph and metope freize, square balusters, and an ornate balustrade. Flanking the central entry are vinyl French doors. The second story of the façade is detailed with French doors and a continuous balcony covering the three bays. The side windows contain 6/6 and 16/12 wood windows. The rear ell contains an interior-end brick chimney. The house was moved in 1980 from another site on the farm and has been remodeled numerous occasions.

002-0352

Other DHR Id #: **002-5045-1482**

Primary Resource Information: **Stable, Stories 2.00, Style: Late Victorian, ca 1890**

2005: The large late Victorian Nydrie stables are designed with a perimeter of gabled sections containing the stalls surrounding a large courtyard. The original stables appears to have been a U-shaped footprint. Access into the courtyard is through a large arched passageway with a stepped parapet on the two sides, the northeast and southwest elevations. The stables sit on a solid brick foundation and are laid in a five-course American brick bond. It is illuminated with 6/6 and 5/5 wood-sash windows and 4-light wood casement windows. The double-leaf wood doors are cross braced and glazed. The gable roof is sheathed with slate shingles

and there is one exterior chimney and one central-interior brick chimney. The main elevation, northwest side, consists of a long side-gable block that intersects with a taller central front-gable section. The main elevation is two stories and the front-gable block is topped with a large hipped roof vented cupola. The northwest elevation is detailed with the exterior chimney and a projecting one-story block that is one bay wide. It appears that the rear section of the stables is an addition as it is constructed in eight-course American brick bond, and some of the walls are clad with weatherboard siding. Other architectural features include segmental arched lintels, corbeled brick lintels on the main block, square-edged wood sills, overhanging eaves, and exposed rafters.

Primary Resource Information: **Church, Stories 1.00, Style: Gothic Revival, pre 1875**

There is no description or condition listed for this church.

2005 survey:

One story high, the wood-frame Centenary Church has a T-shaped footprint with a projecting front-gable section. It rests on a solid soapstone foundation, is clad with weatherboard siding, and is capped with a gable, standing-seam metal roof. It has one interior-end brick chimney and the façade is pierced with 2/2 wood-sash windows and a fixed 3-light and 4-light lancet windows, some of which are boarded over. The gable of the center projecting section is clad with pressed metal shingles. The projecting gable section is flanked with square towers with pyramidal, standing-seam metal roofs with finials. One of these is a bell tower with an inset porch with a turned balustrade. The first story of both towers have a double-leaf entry with Gothic transoms. A shed-roof addition has been made at ground level at the façade of the projecting gable section. A circa 1970 gable-roof dwelling addition is located on the rear elevation. This section has a standing-seam metal roof, is clad with vinyl siding, and has a concrete-block interior chimney. A wood deck is located on the rear of the addition. Other architectural features of the church include overhanging eaves, molded cornice, a flush fascia board, square-edged wood surrounds and sills, and cornerboards.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Federal, 1787**

Architecture Summary: The house is H-shaped and consists of a two-story, five bay main block and a parallel story-and-a-half rear wing connected by a two-story hyphen which was raised from one story early in the present century. The main block of the house and the front portico have modillion cornices. The portico is also pedimented. *End Architecture Summary* Additions and alterations: *End Additions and alterations Interior Description:* "The decoration in the main (west) parlor of the south block is the most elaborate woodwork in the house. The chimney breast is treated with a heavy mantel and overmantle consisting of fluted, Roman Doric pilasters supporting a tall frieze with fluted entablature blocks and a central tablet surmounted by a heavily molded shelf with a Greek-fret base molding. On the shelf rest two stumpy fluted, Roman Doric pilasters supporting an overmantle pediment also decorated with a Greek fret. Tall, stop-fluted Roman Doric pilasters flank this chimney breast...." These taller pilasters support the cornice near the ceiling, which also features the Greek fret. *End Interior Description*

2005 Survey: The front block of the main dwelling at Plain Dealing is two-stories in height and three bays wide with a front-gable, one-story portico. It has a central entry, symmetrical fenestration, two exterior-end brick chimneys in a Flemish bond. The front block sits on a random rubble foundation, is clad with beaded weatherboards with cornerboards, and is pierced with 9/9 and 6/9 wood-sash windows. It has a wood paneled door with a 4-light transom. The portico is supported with paneled pilasters and wood columns and square balusters. The house features a denticulated cornice and molded surrounds and sills.

The middle block is pierced with 6/6 and 9/9 wood-sash windows and has a central wood paneled door and sits on a random rubble foundation.

The rear block contains 12-light wood casement windows and it has two exterior-end brick chimneys in a Flemish bond that are shouldered and corbeled. The side-gable roof is covered with slate shingles and features a molded cornice.

The rear addition was built by the current owners. It rests on a brick foundation, is clad with beaded weatherboards, and is pierced with 6/6 and 9/6 wood-sash windows and 9-light casement windows. It has one interior brick chimney. An inset portico is supported with Tuscan columns and the second story has paneled pilasters.

The Miller's House and the ruins of Cocke's Mill are located on a thirteen-acre tract on the north side of Route 712 overlooking the Hardware River in southern Albemarle County. The Miller's House (built circa 1820 with an addition in 1989) is a two story, three-bay, stone cottage built on a high stone basement. Rising above the side-gable, slate-tile roof, is one exterior-end stone chimney. The central entry contains a single-leaf, vertical-board door and is flanked with 6-light, wood-casement windows. The second story is pierced with 9/6 wood-sash windows and flank a paneled wood door. Covering the first story windows, the second story door, and the lower sashes of the second story windows are horizontal wood louvers. There is an entrance to the basement level on the south facade and an entrance to the addition on the first story of the north facade as well as a Dutch door leading to a small balcony on the south facade. The house is further defined with a rear shed addition, a shed-roof, screened porch on the side elevation, and stone lintels and sills. The gables are clad with weatherboard. The interior of the stone house features two rooms on the first on the first and second floors connected by a boxed staircase. Floors, baseboard trim, paneled doors and simple Federal period mantels are original. The basement contains the kitchen and has retained its original beaded beams.

3199 Plank Road 002-5045-0062

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1900**

Resting on a replacement concrete-block foundation, this wood-frame dwelling is two-stories high, three bays wide, and capped with a hipped roof. The walls are clad with weatherboard siding with cornerboards and rising above the slate tile roof are two interior-end, corbelled, brick chimneys. The façade is pierced with 6/6 wood-sash windows and there is one single-leaf door on both the first and second stories. The first story off-center entrance is illuminated with a 1-light transom and the second story 15-light door is illuminated with a 3-light transom. Across the full-width of the first story is a one-story, flat-roof porch supported with Tuscan columns and features a rooftop balcony with paneled posts. The northeast elevation has become the façade since the dwelling's renovation in the 1950s. This elevation features an off-center, single-leaf entry with 3-light sidelights and a multiple-light ornamental transom. Above the entrance is a balcony with a 6/12 wood-sash window. The balcony is supported with knee braces and has a wrought-iron balustrade. This two-story bay is embellished with paired, two-story pilasters, a molded pediment with cornice returns and a sunburst ornament with a keystone surround. Leading up to the entrance is a double stair with a wrought-iron railing. Located on the rear elevation is a non-historic addition with a porch. The addition does not compromise the integrity of the house.

below roofline and still clad with weatherboard.

2005 Survey:

One-story high and three bays wide, this brick church features an L-shaped footprint with a front-gable roof and a recessed side ell. The church is five bays deep, rests on a solid brick foundation, is laid in a stretcher bond, and the roof is sheathed with standing-seam metal. The windows on the façade are 6/6 lancet-arched, wood-sash windows with arched soldier lintels. The central vestibule is capped with a half-hipped roof and contains double-leaf, wood paneled doors with a lancet-arched, two-part, four-light transom. One exterior-end brick chimney and an integral wood-frame steeple base rises above the roof. The steeple is missing and the front of the base contains wood louvers. Other architectural features of this church include rowlocks sills, molded wood surrounds, overhanging eaves, and a metal balustrade leading to the front entry.

Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, 1900

Set on a stone foundation, the Colonial Revival-style two-story wood-frame dwelling was constructed circa 1900. Clad in weatherboard, the dwelling features a gable-front-and-wing form, with 1.5-story wing. The wing portion features a central 1.5-story entrance gable with detailed Colonial Revival elements, including a central entry with broken pediment, central unicorn, a molded entablature, a paneled soffit, and Tuscan pilasters. The single-leaf paneled entry includes a decorative transom with tracery. The upper story includes a tripartite window with arched central 6/6 flanked by 4/4 wood windows. The "wing" also features 6/9 wood windows, while the "gable-front" portion includes two 6/6 wood windows on each story and a peak lunette window. Other detailing includes a slate roof, a central-interior and two exterior-end brick chimneys, molded surrounds and sills, cornice returns, operable louvered wood shutters, and a molded wood cornice with flush fascia. There are multiple one-story gabled additions off of the projecting gable and rear ell.

Redlands Farm

852 Redlands Farm 002-0067 Other DHR Id #: 002-5045-1488

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Federal, 1798**

Architecture Summary: Redlands is a large rectangular building with a modillion cornice and two creatively-designed interior chimneys. The five-bay entrance facade is unbroken but contains irregular fenestration, while the rear facade features a central projecting two-story bow. Interior description: "Redland's interior is notable for its fine Adamesque woodwork, the most elaborate of which is found in the central drawing room with its bowed end. Here the entablature, mantel and doorways feature garlanded friezes with egg and dart moldings. The entrance hall is interesting for its concealed stairway which ascends between the walls of the hall and the adjacent rooms."

2005: Two-and-a-half stories, Redlands is a large brick dwelling that consists of a rectangular-shaped footprint. The façade, southeast elevation, is detailed in a typical Georgian style, whereas the Federal-style rear elevation is detailed with a large two-story, central bow, which contains three bays. Resting on a solid brick foundation, this house is laid in a Flemish brick bond and is capped with a hipped, slate-shingle roof. The façade is pierced with 12/12 and 9/9 wood-sash windows and a central double-leaf wood paneled door. The windows features jack-arch lintels and molded wood sills and surrounds while the front entry is illuminated with a multi-light transom. Covering three bays on the façade is a flat-roof porch supported with Doric columns and embellished with a rooftop balcony with turned balusters. The porch stands on brick piers and wood steps lead up to the first story. Rising above the roof are two central-interior Flemish bond brick chimneys each detailed with flat-top hood with six openings. The façade is adorned with three gable dormers clad with slate shingles, detailed with fluted pilasters, and each with one 6/6 window. The side elevations have one dormer and the rear elevation features two gable dormers. Architectural features of the house include, louvered wood shutters, a denticulated wood cornice, and a brick water table.

Primary Resource Information: **Archaeological Site, , Style: , 1860**

Architecture Summary: "The present Wake Forest Church, located in the middle of the predominantly black community of the same name, was built ca. 1971 on the site of an earlier church or succession of churches dating to the 1860s." The former church was timber frame with a gable roof, a steeple, and a gabled entry.

2005 Survey: A 1970s photo exists that shows the 19th century church adjacent to the new concrete-block church. The windows are lancet arched and it was clad with weatherboard siding.

Two stories high, this wood-frame house has a side-gable roof sheathed with corrugated-sheet metal. The houses rests on a parged foundation and the walls are clad with weatherboard siding. The original block, circa 1820, has a side-gable roof with a two story rear ell and there is a cross-gable roof, two-story addition on the side elevation that appears to have been constructed in the 1860s. The façade of the original block has a one-story shed roof 1940s addition with a central-interior brick chimney. A front-gable roof addition is located on the front of this 1940s addition. The original block of the house has two exterior-end slate chimneys with brick shafts. The windows in the original block are 6/9 and there are also 2/2 and 6/6 wood-sash windows throughout the house. The façade of the 1860s addition contains a double-leaf, wood paneled door which has a shed-roof overhang supported with brackets. This door is illuminated with 3-light/panel sidelights and a 7-light transom. Other architectural features include square-edged surrounds and sills, operable louvered shutters, and a wood fascia and cornerboards. The 1940s addition features exposed roof rafters. The rear ell of the original block sits on a replacement concrete-block foundation. The original block also features a one-story, shed-roof entry to the cellar.

Primary Resource Information: Single Dwelling, Stories 2.50, Style: Greek Revival, ca 1834

Architecture Summary: The house is a 1.5-story frame structure with grade-level brick basement. Setting the house apart from other large houses of the period are its two-story full-length verandas. Both these porches are contained within the slope of the main gable roof, producing a look popularly associated with the antebellum plantation houses of Louisiana and the Deep South.

End Architecture Summary Additions and alterations: End Additions and alterations Interior Description: The interior of the house retains, with the exception of the mantels, most of its original detailing. Six-raised-panel doors are used throughout the house, and doors and windows are trimmed with architrave casings with traditional broad Federal cyma moldings. The stairways are simple and inconspicuous. The basement stair is of semi-enclosed straight-run form, with closed string, beaded square newels, and rectangular-section balusters. The main-floor stair, which ascends directly above it, is of open string form. The railing consists of rectangular balusters and cylindrical turned newels terminating in a square-section head and base; the newel cap has broadly-beveled sloping sides.

Built in 1834, the main house at Roundtop is two-and-a-half stories and three bays wide. It has a rectangular-shaped footprint, rests on a solid brick foundation and is capped with a side-gable, asphalt-shingle roof. The first level is constructed of a five-course American bond and the second story is wood-frame construction clad with beaded weatherboards. The roof extends on the façade to create a two-story, inset porch across the full-width of the house. According to Ed Lay this porch is a replacement of a smaller upper-level portico that sheltered the front entry. The current porch is accessed on the first and second stories and features Tuscan posts on both levels and flat, wood, two-prong balusters on the second story. Both stories on the façade feature a central single-leaf entry flanked with 6/6 wood-sash windows. The first story entry is recessed and illuminated with a 5-light transom. The second story entry is illuminated with 4-light sidelights and a 5-light transom. Rising above the roof on both the front and rear elevations are three gable dormers which are not original. The front dormers contain 9-light casement windows and the rear dormers contain 6/6 wood-sash windows. Rising above the roof are two central-interior brick corbeled chimneys. A third similar chimney was originally an exterior chimney on the rear elevation, however, the rear shed-roof porch has been enclosed encompassing the chimney. A gable portico covers the side entry and a small room, one story high and been added to the side elevation and capped with a half-hipped roof. (8/2004)

Two stories in height and three bays wide, this wood-frame dwelling features a complex footprint with several additions. The original building has a rectangular-shaped footprint. Set on a solid foundation (not visible at the time of the survey), this house is clad with beaded weatherboard siding and is pierced with 9/6 and 6/6 wood windows and central double-leaf glass doors. The windows feature molded surrounds and square-edged sills and spandrel panels on the first story. A half-hipped porch supported with paired chamfered wood posts shelters the full-width of the façade on the first story. The house is capped with a side-gable, standing-seam metal roof and two exterior-end brick shouldered chimneys and one interior chimney rises above the roof. The chimneys are constructed in a 5-course American bond. A two-story ell addition is located on the rear elevation. A side-gable, two-story block is attached to the rear of the ell. The porch on this rear addition extends to the east side and becomes a breezeway that connects to the garage. Other architectural features of the house include cornerboards, overhanging eaves, and a boxed cornice. This house has been renovated in the 1990s.

Primary Resource Information: **Single Dwelling, Stories 1.50, Style: Other, ca 1900**

The circa 1900 stone cottage stand one-and-a-half stories in height and is capped by a half-hipped slate roof with central clipped gable. The façade, which measures two bays wide, is dominated by a half-hipped porch with three arched entries with keystones and Tuscan post supports. The porch shelters an off-center single-leaf door with decorative entablature and fluted pilasters. The original porch featured stone posts. The gable peak is clad in square-butt shingles, as are the side elevation half-hipped dormers. Other detailing include 9/1 and 6/6 wood windows, overhanging eaves, a molded wood cornice, and two central-interior stone chimneys and an exterior-end flue. A wing addition was added in 1989 and features a side-gabled hyphen leading to a pyramidal square wing. Arched wood surrounds and square-edged wood sills also mark the dwelling. A rear elevation gabled addition and a side-elevation enclosed porch also detail the structure.

Primary Resource Information: **Single Dwelling, Stories 1.50, Style: Other, 1791**

Constructed in the late eighteenth century, Solitude is an example of vernacular housing once relatively common but now very rare in Virginia. Resting on a solid random-rubble foundation, this timber-frame dwelling is capped with a side-gable, corrugated-metal roof. The walls are clad with weatherboard siding and the facade is three bays wide with one 4/4 wood-sash window and two single-leaf, vertical-board doors. The two exterior-end brick chimneys are constructed in 7 and 8 American bond.

The main house has two principal rooms with a shed addition, and one-and-a-half story elevations. Its timber frame has brick nogging in the second-period (circa 1807) addition. The house remains largely unaltered and encloses the only known Virginia wall of highly-finished beaded, riven clapboards; in addition, its two attic rooms are completely sheathed with conventional riven four-foot boards. The overall floor plan is rectangular and measures 36'7" along the east-west axis and 26'7" along the north-south axis. The house began as a single-room structure probably constructed in the late 1790s. In 1810 the house doubled in size with the

addition of a brick-nogged room to the east end of the house. The shed addition on the north side of the house was added in 1815-1830. The 169.5 acre farm also contains a privy, poultry house, garage, wagon shed, barn, and foundation to a former dwelling. Solitude is located at the base of Carter's Mountain near the Hardware River. (NRHP Nom 8/91)
The form of the house evolved to its present five-room plan by about 1830. (NRHP Nom 8/91)

Front gable, I house. Turned molded cornice. 2 stories; 3 bays; 1-story, 3-bay porch with turned wood columns which support the flat roof. 6/6 lights, double hung sash windows. At the rear, there is a 2-story lean-to; frame with masonry foundation; side elevation with gable roof; stucco finish and large windows; 1 story.

2005 survey:

Set on a solid parged foundation, the circa 1840 two-story center-gabled dwelling is capped by a standing-seam metal roof and clad in weatherboard cladding, with parging on the first story. The symmetrically fenestrated three-bay dwelling features a central single-leaf wood paneled door, 6/6 wood windows, a molded wood cornice with returns, and interior-end brick chimneys. Operable louvered shutters, a raised basement, a hipped one-story three bay porch with turned posts, and a wide fascia mark the dwelling, which appears to have been renovated in the late 19th century. The dwelling also features a rear two-story shed addition with 2/2 wood windows, a rear shed porch, and a breezeway to a one-story side-gabled wing addition. The wing features a corrugated metal roof, overhanging eaves, and weatherboard cladding.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Federal, 1833**

Architecture Summary: The present Sunnyfields property is a 9.5 acre tract, the core of a 522-acre plantation assembled in the 1830s by William B. Phillips, a prominent master builder who served as one of the principal brick masons at the University of Virginia. Although the balance of the original plantation is under separate ownership, it is protected from inappropriate development by an easement held by the Virginia Outdoors Foundation. The focal point of Sunnyfields is a two-story brick plantation house presumably designed and built by Phillips for his own residence shortly after he purchased the place. Although the house has had nineteenth and early twentieth century alterations and additions, it preserves sufficient architectural integrity in its form, details, and masonry to illustrate the design and craftsmanship skills of a noted Jeffersonian builder. Adding to the interest of the property is a long servants' outbuilding, a rare survival in the area. Sunnyfields also has the remnants of a large nineteenth-century terraced garden and an informally landscaped park. The property is located just below Monticello Mountain and is part of the view enjoyed by thousands of visitors to Monticello annually.

For more information see the National Register Nomination. A large rear addition was added circa 2003.

One-story high and three bays wide on the main block, this building is constructed of stone and is capped with a hipped, standing-seam metal roof. The roof extends out to create a porte cochere supported by two stone posts and features a sign of "Simeon" on the wood fascia board. Flanking the central, single-leaf, 15-light door are 8-light wood casement windows. There is one interior-end stone chimney and an in-filled door opening is located on the north elevation. A smaller one-story, wood-frame recessed wing is located on the south elevation. This section is clad with weatherboard siding and has a shed-roof porch supported with Tuscan posts. It has three 1-light fixed windows.

1333 Thomas Jefferson Parkway 002-0478

Other DHR Id #: **002-5045-0219**

Primary Resource Information: **Church, Stories 1.00, Style: Gothic Revival, 1892**

The most salient exterior feature of the building is its projecting front gable with pierced pointed arch. The interior retains nearly all of its original fittings.

2003, PIF: Constructed in 1892-93 in the Carpenter Gothic style, St. Luke's Chapel is a rectangular one-story frame structure that stands over a rubblestone foundation of varying heights, and is capped by a steeply pitched gable roof. Exterior walls are covered with beaded weatherboard siding painted white, and the roof is covered with standing-seam metal painted red. Gable end elevations face east and west, and a shallow gable-roofed vestibule with a lancet-arched double-leaf entry door extends from the east elevation. The east gable end projects forward and is cut away to create a large lancet arch surmounting the vestibule. On the roof, a small belfry with a round-arched ventilator and a pyramidal roof is flanked on the north and south by two brick stove chimneys and topped with a wooden cross painted white.

Fenestration is regular and eighteen bright stained glass windows with floral, curvilinear, and geometric designs provide colorful accents around the chapel. Most notable are the large arch-capped window on the west elevation and the six pairs of rectangular windows that line the north and south elevations.

A square, one-room annex on the southwest corner of the chapel, thought to have been built shortly after the chapel was constructed, was enlarged in 1994 when a modest wing designed by Smith-Garrett, architects was added to contain a sacristy and bathroom. The wing is built over a high rubblestone foundation, covered with beaded weatherboard siding, topped with a standing seam metal roof, and painted to match the chapel. A south-facing porch served by a seven-step staircase that opens on the east accesses the entrance to the wing. Decorative elements on the annex include two stained glass windows and a lancet arch outlined by a projecting gable on the east elevation.

The entry doors at St. Luke's Chapel open into a narthex within the vestibule from which a center aisle leads between two sections of pews to a raised chancel at the west end of the building. An elegant wooden screen topped by round-arches and ornamented with trefoil and quatrefoil sawn work and brackets rises over a communion rail with turned balusters that surrounds the chancel.

Built between 1880 and 1900, this wood-frame, T-shaped house depicts a transition between the Queen Anne and Colonial Revival styles. It rests on a solid foundation, and the walls are clad with vinyl siding. The walls are pierced with 1/1 wood-sash windows and the entry contains a single-leaf, panel and light wood door. The hipped roof is covered with standing-seam metal and wrapped around the façade is a porch supported with Tuscan columns and square balusters. There is one central-interior brick, corbeled chimney in the main block and two interior-end brick chimneys in the rear, hipped-roof, one-story addition. Other architectural features include thin aluminum surrounds, a boxed cornice, and the porch sits on a concrete piers.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: , 1870**

Two-stories high and three bays wide, this wood-frame I-house sits on a solid slate or soapstone foundation and is capped with a side-gable roof. The facade is pierced with 6/6 wood-sash windows and covering the central, single-leaf, paneled, wood door is a flat-roof portico supported with Tuscan posts. Rising above the standing-seam metal roof are two exterior-end brick, shouldered chimneys. The entrance is illuminated with a 4-light transom and 3-light sidelights over a dado panel. The wood porch cornice is molded and the house features square-edged wood surrounds and sills, cornerboards, and a boxed cornice with returns. Covering two bays on the rear elevation is a shed-roof screened porch.

Note--the stack of each chimney is built several inches from the gable end of the house, a traditional practice in the area. A unusual feature is that the vacant space is filled in by a vertical board. Interior retains much of its original detailing.

Primary Resource Information: **Tavern/Ordinary, Stories 2.00, Style: Other, ca 1772**

Architecture Summary: The main section of the tavern is an eighteenth century (circa 1772-73), two story wood structure with a hall-parlor plan. It has a full basement, a one story shed-like projection to the south, and a one-and-a-half story dormered wing to the east. The tavern is constructed with stone foundations, stone and brick chimneys, and a wood shingle roof. The wing of the main section is joined on the east end, via an enclosed passage, to a single pen log structure, which was brought to the site in 1927.

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 7 Page 359

The log pen replaces a late nineteenth-early twentieth century one story shed-like addition that was not moved to the new site. Also, during the original reconstruction, an unattached one story single pen log structure was located approximately thirty feet west of the main section of the tavern. In 1969 the two structures were physically joined when a one-and-a-half story dormered frame structure was built between them. The log pen was enlarged in 1979 with a one story frame structure on the south side (rear). The nominated property includes the tavern and its immediate surroundings. No other buildings are included in this nomination.

Interior Description: See VDHR Survey File for details.

2005: 2005: The above information from a previous survey is correct, however, below are details that were not included. The windows in the tavern are 9/6, 9/9, 8/8 and 2-light fixed wood windows. The entries contain single-leaf wood paneled doors and the door in the main block has a 4-light transom. There are two exterior-end, random-rubble chimneys and two exterior-end brick chimneys. The doors and windows have molded wood surrounds. There is also one concrete-block stuccoed flue. The brick chimneys are shouldered and have corbeled caps. The two-story, three-bay wide porch on the front is supported with chamfered wood posts and feature square balusters. The dormers on the front are gable and contain 6/6 wood windows. The main block is two-and-a-half stories with attic windows flanking the chimneys. The log section on the east end has a scalloped vergeboard. The modern addition on the rear contains a dining area and has a flat roof.

Primary Resource Information: **Single Dwelling, Stories 1.00, Style: Colonial, 1941**

2005 Survey:

The original dwelling was possibly built by 1737 and burned before 1800. A second dwelling was constructed and then burned in 1939. The architect Charles Baker designed a third dwelling for this site using the original brick chimneys as brick walls. This house was built around 1941. It is one story in height and features an rectangular-shaped footprint with a side-gable roof. There are hyphens on both side elevations that lead to front-gable roof additions and an ell addition on the rear elevation of the main block. The main block is constructed in a brick Flemish bond and rests on a similar foundation. The façade across the entire building is pierced with 9/1, 1/6, 1/1, 6/6 wood-sash windows and 6-light wood casement windows. The front entry contains a double-leaf, wood 3-panel door and is illuminated with a 5-light transom. The gable roof is sheathed with slate shingles and there is one exterior-end and one interior-end Flemish-bond brick chimney and one central-interior brick chimney. Projecting from the façade covering the central entry is a gable-roof portico supported with Tuscan posts. The front-gable wing on the west side is clad with vinyl siding and has a shed-roof addition on the northwest elevation. The wing on the opposite side is constructed in brick and contains a central-interior brick chimney. The southeast elevation of this wing has a one-bay, half-hipped screened porch with a Chippendale balustrade and a standing-seam metal roof. The rear elevation of the main block features a three bay wide porch supported with Tuscan posts. The rear elevation contains double-leaf, 5-light doors. Other architectural features include a denticulated cornice, splayed jack arch lintels, a molded wood cornice with returns, and a few operable louvered wood shutters remain. The gables of the main block are clad with beaded weatherboards and the southeast hyphen has three arched bays.

Architecture Summary: The William Walker House (ca. 1803) is situated on the east side of Route 627 in the village of Warren in southern Albemarle County. The 1-story, 3-bay hipped-roof brick house is built on a high English basement. There are entrances on the north and south facades and a pedimented portico on the south. There is also a 1-story, 1-bay 1978 addition on the east that contains baths and utility rooms. The interior plan consists of a center hall flanked by a bedroom on each side and a large, full-width salon on the north end. The basement level contains two bedrooms, a kitchen/sitting room, and utility rooms. Much of the original woodwork remains, including six mantels, chair rails, and window and door trim. Both the interior and exterior are in excellent condition. (NRHP nom. 1/25/90)

2005 Survey:

Architecture Summary: Large early 19th century mill. Scored lines in brick mortar joints, closers used in header rows. Interesting flat arch over basement door on creek side. Circular saw-cut interior framing, typical 19th century factory support forms., per recon. survey.

2005 Survey:

Three-and-a-half stories in height, this brick grist mill features a rectangular-shaped footprint. It rests on a solid random rubble foundation and the first story is laid in a four-course American bond. The upper stories are wood frame and are clad in weatherboard siding. The façade is pierced with 8/8 wood-sash windows, paired 3-light wood casement windows, and a central double-leaf wood door. Rising above the front-gable, slate-shingle roof is one interior-end brick chimney with a corbeled cap. Adorning the roof are three gable dormers clad with weatherboard siding and each containing 3-light casement windows. The window and door bays features segmental-arch lintels comprised of two rows of headers. The river side of the mill had a basement door with a flat arch lintel, which has been in filled during the late 20th century. Other architectural features of the mill include square-edged sills and a brick water table.

Resting on a brick pier foundation with brick infill, this house is painted white and the logs are constructed in a square notch. The dwelling is pierced with 6/6 wood-sash windows and a single-leaf beaded vertical-board door. The entrance is illuminated with a 4-light transom. Covering the central entry is a shed-roof porch supported with chamfered wood posts and square balusters. The porch rests on a brick pier foundation. Rising above the side-gable, standing-seam metal roof are two exterior-end brick chimneys both shouldered and corbeled. The wings are clad with beaded weatherboard siding, contain 6/6 windows, and have side-gable, standing-seam metal roofs. Each wing has an exterior-end brick chimney that are shouldered and corbeled and these wings rest on brick foundations. The rear ell is two stories and has one exterior-end brick chimney. The rear ell is clad with beaded weatherboard siding and has a boxed cornice. A screened porch addition is also located on the rear and it is clad with pressed vertical-board siding and has a shed roof. Other architectural features of this house include square-edged sills, vertical-board clad gables, wide eaves, and exposed rafters.

White Pine Street

25 White Pine Street **002-5045-1294**

Primary Resource Information: **Single Dwelling, Stories 1.00, Style: Other, ca 1930**

This building originally served as a grocery warehouse for the owner that lived to the front of it at 45 White Pine Street. It was renovated by the current owner in 1999 to serve as a single-family dwelling. This wood-frame house is one story in height, and features a rectangular-shaped footprint with a front-gable block intersecting with a side-gable section. Resting on a solid brick stretcher-bond foundation, this concrete-block dwelling is clad with a log veneer siding and is pierced with 1-light metal-sash windows. The main entry appears to be on the southeast elevation. A shed-roof porch covers the rear elevation of the side-gable block. This porch covers five bays and is supported with square wood posts and has square balusters. This building was remodeled to contain an attached garage that faces Valley Street.

White Pine Street

40 White Pine Street **002-5045-1293**

Primary Resource Information: **Single Dwelling, Stories 1.50, Style: Bungalow/Craftsman, ca 1920**

One-and-a-half stories in height and three bays wide, this wood-frame bungalow features a rectangular-shaped footprint. Resting on a solid brick stretcher-bond foundation, this dwelling is clad with weatherboard siding and is pierced with 6/6 wood-sash windows and a single-leaf door. Covering the three bays on the façade is a shed-roof porch supported with square wood posts. The porch rests on a brick pier foundation and features a solid balustrade. Rising above the side-gable, asphalt-shingle roof is one central-interior, brick chimney. The façade is adorned with a shed-roof dormer with four 6/6 windows. Each elevation has a one-story, side-gable, recessed wing. The wing on the northwest elevation contains an exterior-end brick chimney and the opposite wing stands on a concrete-block foundation. Other architectural features of the house include wide eaves, knee braces, and square-edged surrounds.

45 White Pine Street **002-5045-1295**

Primary Resource Information: **Single Dwelling, Stories 1.50, Style: Tudor Revival, ca 1940**

One-and-a-half stories in height, the original wood-frame dwelling featured an L-shaped footprint with projecting front gable bay. Resting on a pier brick foundation with concrete-block infill, this dwelling is clad with weatherboard siding and is pierced with 6/6 wood-sash windows and a single-leaf door. Covering the three bays of the main block is a shed-roof porch supported with battered wood posts. The porch rests on a brick pier foundation. Adorning the façade of the main block is shallow-pitched, shed-roof dormer with four 6-light awning windows. The projecting front-gable bay features an exterior-front, shouldered and corbeled brick chimney. This front-gable section extends to the rear creating a one-and-a-half story rear ell. In the angle of the rear ell is a large shed-roof addition that stands two stories in height – each story appears to be a separate addition. The upper story is clad with pressed vertical-board siding and the entire section is two bays wide. This same front-gable section features three gable dormers on the southeast elevation. Other architectural features of this house include paired windows, a solid weatherboard balustrade, and exposed rafters.

Summary Statement

Settled largely by wealthy Tidewater Virginians as they pushed into the colony's western frontier in the 1720s, the Southern Albemarle Rural Historic District, and eastern/southern Albemarle County in general, initially developed slowly. Large land patents, fertile soil, and a primarily slave-driven agricultural economy based on tobacco production inspired initial settlement in the region. Settlement patterns were strongly tied to transportation routes that included waterways, early roads, canals and turnpikes, creating an intricate system that remains primarily intact and continues to affect modern circulation and growth patterns. Beyond the geographical boundaries of the Rivanna and James Rivers and the western Green Mountains chain, the historic district is partially defined by this intact system of early roads that shaped its agricultural, social, technological, and commercial development. The resulting settlement patterns included distinct plantations and farmsteads as well as scattered rural villages, tied to both river trade and overland travel.

The period of significance extends from circa 1729 to 1955, reflecting an evolving broad range of cultural patterns from early planters' estates to small Reconstruction-period African-American villages to commercial crossroads villages. The district, and its architecture, also represents the gradual shift from agricultural dominance to a more diversified, broad-based economy. The rural agrarian district evidences the historical land use patterns, including fields, gardens, pastures, fence lines, and wooded forests that have evolved over time. The accompanying architecture, ranging from high-style mansions to small vernacular farm buildings to 1920s workers' housing, incorporates a wealth of building types, forms, and styles. The diversity of these resources, dating from the eighteenth-, nineteenth-, and early-twentieth centuries, reflects the evolving cultural patterns of the district's 277 years of non-aboriginal settlement. Through this architectural evolution, the district reflects the development of the agrarian landscape and the rise of a considerable planter class. While Monticello, which is the quintessential site representing Thomas Jefferson, stands as an idealized example of the late-eighteenth-, early-nineteenth-century agrarian farm in Albemarle County, the district also includes numerous other high-style and vernacular resources from the mid 1700s to the present. The district, with Monticello, significantly represents the profound influence that Jefferson had on the nation's agricultural and architectural practices, with numerous buildings constructed by his skilled craftsmen and builders. While dominated by large farmsteads, the district also includes several early villages, including Milton, Howardsville, and Warren, as well as early twentieth-century communities such as Esmont, Keene, Woodridge, and Simeon, and the primarily African-American communities of Rose Hill, Porters, and Blenheim.

Twenty-three properties are currently listed individually on the National Register of Historic Places, including Ash Lawn-Highland, Bellair, Blenheim, Christ Church Glendower, Clifton, Cocke's Mill and Miller's House, Edgemont, Esmont, Estouteville, Guthrie Hall, High Meadows, Monticello (also National Historic Landmark and

UNESCO World Heritage Site with the University of Virginia), Monticola, Morven, Mount Ida, Mountain Grove, Pine Knot, Plain Dealing, the Rectory, Redlands, Sunnyfields, Westcote, and the William Walker House. Michie Tavern is listed on the Virginia Landmarks Register only. Of the total 83,627 acres within the district boundary, 14,744 acres have been placed under conservation easement as of January 2007.

The Southern Albemarle Rural Historic District is the largest in Virginia, almost linking four neighboring National Register historic districts (Madison-Barbour, Southwest Mountains, Southern Albemarle, and Scottsville) to encompass over 147,000 acres of land in both Albemarle and Orange Counties. Notably, the district meets all four criteria for significance (A, B, C, and D) established by the National Park Service, including broad patterns of history, significant persons, architecture, and archaeology. Specifically, the district is significant for its association with broad historical patterns relating to early settlement and historical development of Virginia's Piedmont region, the advance of transportation routes and types, Reconstruction-era African-American community development, as well as the evolution of agricultural, educational and industrial practices. In addition, the district is historically associated with political leaders important in the national and state arenas. A few of these individuals include Presidents Thomas Jefferson and James Monroe, Senator Andrew Stevenson, Governors Thomas Mann Randolph and Edward Coles, and the missionary Charlotte Digges "Lottie" Moon. Architecturally, the district contains the best collection of buildings influenced by the Jefferson's neo-classical ideals in the world, including Monticello as well as an important collection of designs by Jefferson's craftsmen. Additionally, the district boasts examples of high-style Colonial Revival dwellings, as well as restored Colonial-era and Federal-style architectural designs undertaken by nationally prominent architects. A partial list of Colonial Revival architects who worked in the district includes William Adams Delano, McKim, Mead, and White, Milton Grigg, Floyd Johnson, and Henderson Heyward. Nationally significant landscape architects also restored a number of historic gardens in the district including Annette Hoyt Flanders, who worked at Morven. Monticello's restored landscape as well as the gardens at Redlands, Edgemont, Enniscorthy, and others also reflect significant contributions to landscape design. The district also features important archaeological resources that have been proven to contain significant information about the material culture of Albemarle County and the larger Virginia Piedmont region from circa 1737 through to the early republic period. A majority of the documented sites are located on lands owned by the Thomas Jefferson Foundation. The substantial research on these sites is representative of the overall district's history in within the plantation context. Additionally, one pre-historic Native-American site has been documented in the district, associated with the James River settlements at Warren; however, other sites throughout the district have the potential of yielding further important information on the district's prehistoric and historic development. The primarily intact cultural landscape also retains highly sufficient integrity of design, workmanship, materials, location, and the feeling of a diverse rural community.

HISTORICAL BACKGROUND

Early Settlement 1727-1744

The first permanent white settlers began patenting land in what would become Albemarle County in 1727. At that time, the future county was part of Goochland County, which was formed in 1727. Although there were earlier pioneers that had settled land on the far western frontiers of Goochland, the eastern half was primarily settled by Tidewater gentry moving westward for economic opportunities and fresh land for tobacco cultivation.

Albemarle County, VA**

Section 8 Page 379

The settlers often chose the most fertile soils and prime building locations for their patent sites. However, the lure of lucrative mineral resources, spurred by the financial success of iron foundries such as Germanna, also affected initial settlement patterns by encouraging the patenting of less fertile mountain land. The eastern half of what became Albemarle County, with its abundance of rich soils, multiple rivers and streams, rolling hills with good drainage, and numerous hardwood forests, presented an ideal landscape to the westward moving settlers.

The earliest recorded patents included lands on both sides of the Southwest Mountains (also called the Chestnut Mountains) in the northeastern portion of what became Albemarle County. In 1727, George Hoomes patented 3,100 acres and Nicholas Meriwether obtained a tract of 13,762 acres. While the eastern half of the county as a whole was enticing due to lack of mountains dividing it from the more populous Tidewater region, the southern portion proved to ultimately be more economically attractive due to the James River. During this period, the James River was one of Virginia's most important transportation corridors, and so proximity to it dramatically aided in the exportation of agricultural products and the importing of finished goods. Due to these advantages, Dr. George Nicholas, whose parcel was located along the James and encompassed the modern village of Warren, is recorded as being the first in the county to officially "seat" his 1729 patent of 2,600 acres. By 1735, other wealthy members of the Tidewater gentry held and seated significant land patents in the County and, not surprisingly, a majority of these were located in the Southern Albemarle Rural Historic District.¹ Of the five large patents issued in 1730, four were located within the district boundaries. These included a 400-acre tract along the James and Rockfish Rivers by George Howard at what became Howardsville, 2,000 acres by Charles Hudson on the Hardware River below Carter's Bridge, 19,350 acres (Secretary's Quarter) by Secretary John Carter on the "Great Mountain" (which became known as Carter's Mountain), and 6,400 acres by Francis Eppes along the Hardware, Rockfish, and James Rivers (an area later traversed by Eppes Creek). Of the three patents in 1731, only Charles Hudson's 540 acres was located within the district. By 1732, there were eight patents, four located within the district. The district's patents from 1732 included 1,200 acres along the north banks of the James River by Thomas Goolsby, 550 acres along Totier Creek by Edward Scott, 400 acres by John Key, and 400 acres near the Rivanna River at Milton by Dr. Arthur Hopkins. Up to this point, all of the land patented in Albemarle was still located in the eastern portion of the county. In 1733 and 1734, there were a total of seventeen patents, and this year also marks the beginning of patents for smaller interior tracts, including Lego farm (currently owned by The Thomas Jefferson Foundation) on the north banks of the Rivanna. Another twenty-five patents were obtained in 1735. Two of these, including the 1,000-acre Tufton parcel on the south side of the Rivanna River by Peter Jefferson and the 2,400-acre tract on the north side of the Rivanna by William Randolph that included Shadwell (where Thomas Jefferson was later born) were found in the district. The year 1737 saw an additional nineteen patents in the county, although by this point a majority of the patents were located in the western and interior portions of the county. The last large patents in the district included Allen Howard's 1742 patent of an additional 2,000 acres along the Rockfish River and the patents of Dr. Arthur Hopkins, who added nearly 4,000 acres to his holdings along Totier and Ballenger's Creeks between 1748 and 1765.

Colonizing the wilderness of Albemarle was somewhat easier than the establishment of other frontier areas due to the fact that the Native American population, primarily the Monacans, had already either been decimated by disease or pushed westward by the Scots-Irish and Germans who were filtering into the Shenandoah Valley. The lack of aboriginal competition aided the young settlement by limiting the number of raids, which allowed

Section 8 Page 380

building and field preparation to advance unhindered. Additionally, Native Americans had already cleared some lands and developed pathways through the wilderness during their long occupation, making it easier to establish the first plantations. *An Economic and Social Survey of Albemarle County* dating to 1922 furthers this point, stating that Albemarle County “was the first ‘mountain resort’ opened up in America, the frontiers of every other colony being unsafe to any but armed men, while here, owing to the advent of the Valley movement, the Indians had not only crossed the Blue Ridge but were now on the farther side of the Valley. No similar area in America was ever more easily colonized.”² Due to the large amounts of fertile unoccupied land, the population of Albemarle increased rapidly in the early settlement period, particularly in the James River region, with a population of 5,275 (3,550 white, 1,725 slave) by 1737.

In 1744, the county of Albemarle was officially established, gaining its nomenclature from the tradition of celebrating the sitting Virginia Governor; William Anne Keppel, second earl of Albemarle. Known as “Big Albemarle,” the county included parts of present-day Appomattox and Campbell Counties, as well as the entirety of Buckingham, Amherst, Nelson, and Fluvanna Counties. In 1761, Buckingham, Nelson, and Amherst Counties were carved from Albemarle, while a small portion of the northeastern corner of the county was taken from Louisa County. In 1777, Fluvanna County was established, reducing Albemarle to its current configuration. By the current county’s initial creation, much of the land was already subdivided, with both large patents as well as a number of 400-acre or smaller sized tracts. Unlike the later frontiers to the west, Albemarle experienced little land speculation beyond the initial “land grab” with much of its patented lands seated and held by consecutive generations of the same family. Historian John Moore relates that the stability of landownership impacted the landscape and culture of the county by “providing the economic basis for a resident landowning class which, in turn, furnished both political and social leadership for years to come.”³

Establishment of Albemarle County 1745-1762

Once established as a county, the organization of a local government was one of the first communal tasks undertaken by the local citizens. The primary task was to select a central governmental seat for the county (which was still the larger “Big Albemarle”). The responsibility to determine a new courthouse site was left to a group of commissioners appointed by the Virginia General Assembly. The first convened magistrates for Albemarle included Joshua Fry, Peter Jefferson, Allen Howard, William Cabell, Joseph Thompson, and Thomas Ballou, who all concurred that the location for a new courthouse should be along the important and centrally-located James River. Typically in Virginia, a site for a new county seat was on land owned by a commissioner, who would donate the land in expectation of the increased value of his adjacent land once a town was established. Although not an appointed commissioner, Samuel Scott, son of Edward Scott who had patented 550 acres along the James River near Totier Creek in 1732, offered to erect a courthouse, jail, stocks, and pillory at his own cost if the location was upon his lands. To avoid the problems associated with river flooding, the site ultimately chosen was a bluff on an adjoining parcel owned by Scott’s brother, Daniel Scott, at his Scott’s Landing/Belle Meade/Valmont plantation.

Also by custom, the establishment of the courthouse square and construction of the courthouse was left to the appointed trustees. However, it was again Scott who undertook this responsibility and he chose to model the courthouse after the existing Goochland County courthouse and employed John Moore as the undertaker.⁴ While

nothing remains of the original courthouse or any of the associated buildings, records do reveal that Daniel Scott and John Lewis both operated ordinaries near the courthouse, which provided “good, wholesome, and Cleanly Lodging and Diet for Travellers and Stablage &c. for Horses.”⁵ Daniel Scott was also licensed to operate a ferry from his plantation to the other side of the James River, while William Battersby operated one crossing Totier Creek; both ferries were established to make it easier to reach the courthouse.

Historically, courthouse squares were centrally or prominently located on the town plat, often developing into lively town centers. The primary streets, which traditionally formed a perimeter around the courthouse square, were expanded outward to form a formal street grid, with cross streets added to divide the larger divisions into individual lots. Lots surrounding the square were primarily improved by important businesses and so provided an “opportunity for most segments of society to transact personal business, renew acquaintances, and participate in both the great and small events that affected the community” on bustling court days.⁶ Furthermore, as the number of businesses grew, the business community itself became a regional economic magnet, and so the importance of being located next to the courthouse lessened in importance. This pattern is particularly evident for the Scott’s Landing courthouse site. Even though nothing remains above ground at the site of the courthouse, the commercial district that was established to take advantage of its proximity to the courthouse developed into the region’s most important commercial center. The town, officially established as “Scottsville” in 1818, continued to thrive until the ascendancy of the railroad diverted its commerce, and its prosperity, to Charlottesville in the mid-nineteenth century.

Many of the eastern Albemarle early settlers did not live on the land until after their slaves had first cleared several fields and laid out the general plantation; often just building a small claim house initially. By 1745, 160,000 acres of land in Albemarle County were divided into 191 patents, averaging approximately 830 acres each. The rural eighteenth century farm complexes, spread over vast acreage, resembled small autonomous villages with numerous outbuildings constructed to support the main dwelling, which was often perched on a hill. The supporting outbuildings primarily included kitchens, icehouses, slave quarters, granaries, smokehouses, barns, dairies, schools, chapels, and other domestic and agricultural-related dependencies. As the agrarian “village” grew and the economy became more complex, gristmills, taverns/ordinaries, schools, stores, and churches further enhanced the landscape beyond the self-contained plantation. Although the early eighteenth-century domestic architecture of these large, self-sufficient plantation complexes often consisted of simple log dwellings, including claim houses, much more substantial architecture reflecting the owner’s growing wealth soon emerged. Houses that reflect the early move to a more substantial architecturally significant model include Viewmont, Shadwell, Bellair, and Plain Dealing, among others.

In addition to houses, early settlers also constructed buildings for commercial and industrial purposes. It is known that between 1745 and 1763 at least one tinker, weaver, blacksmith, and haberdasher, as well as several carpenters were located in the county. A forge also existed near Carter’s Bridge that reflects an early attempt at iron production in the district. After the Revolution, commercial activity in the county increased, primarily tied to the expansion of wheat and the associated milling industry, as well as the increased tobacco trade at river ports such as Milton and Scottsville. However, stores and commercial interests along overland transportation routes also rose at this time. Samuel Dyer constructed the small store that became known as “Plain Dealing” soon after

he purchased the adjacent plantation in 1787. Located at the crossroads of the Staunton to James River Road and the stage road to Charlottesville, the store stood at the center of the community, which included a tavern, wagon stop, post office, store, voting place, and trading post.⁷ Other early stores are known to have been located near Howardsville, Scott's Landing, Milton and Warren, although there were undoubtedly more.

Despite these early attempts at commercial and industrial enterprises, agricultural pursuits were by far the dominant economic activity, and the primary crop of the early Albemarle County plantations was tobacco. Although corn, vegetables, and other crops were planted for individual consumption, tobacco was king. Not only a powerful cash crop, tobacco also served as legal tender at a time when the Colony did not have a widely circulated currency. The transplantation of the institution of slavery into the region was also a direct result of tobacco cultivation. It is important to note that few Albemarle plantations owned more than fifty slaves, with the vast majority of farms only possessing a handful. However, the extent of slave labor is more clearly revealed in the population census records. In 1790, the county population was 12,585 with 6,835 white (54%) and 5,750 black (45%). While the cultivation of tobacco remained an important cash crop and played an important role in the region's economy into the twentieth-century, it began to be supplanted by wheat by the last quarter of the eighteenth century.

The transition to wheat from tobacco was not representative of an evolution of the general Tidewater agricultural practices, and was instead influenced by the region's soils and its proximity to German and Scotch-Irish settlers found in the western part of the county. Indeed, Albemarle County's initial settlement is particularly significant, as it represents the frontier between the westwardly pushing Tidewater gentry and the eastwardly moving German and Scotch-Irish settlers of the Shenandoah Valley. This dichotomy of settlement styles ultimately resulted not in a clash of cultures, but instead in a significant merging of agricultural practices. John Hammond Moore explores this idea in *Albemarle: Jefferson's County 1727-1976*, revealing that while the Tidewater settlers brought with them a slave-based economy with "a get-rich quick, single crop outlook" modeled on the established Tidewater society, the German/Scotch-Irish settlers instead established small family-run farms that were not dependant on tobacco or slave labor. Agricultural practices of the German/Scotch-Irish included raising wheat, corn, and cattle, practicing crop rotation, housing animals in barns, and the progressive use of manure as a fertilizer. While recorded later in the history of the county, an 1815 traveler's account also demonstrates this geographical division of agricultural practices by stating that "From here [the western Albemarle town of New York] westwards tobacco culture completely discontinues."⁸

The Tidewater immigrants, rather than rejecting the practices of the German/Scotch-Irish, instead eventually moderated the risks of the unstable tobacco markets by incorporating the sustainable methods of diversified agriculture that had been developed in the Valley.⁹ However, the groups did not intermix geographically and the Tidewater gentry, who accounted for a majority of the region's settlers, primarily occupied the flatter eastern portions of the county. The Germans and Scotch-Irish, who were descendants of the settlers who originally immigrated into Pennsylvania for economic and religious reasons, instead settled the mountainous western lands. Even though these lands were less fertile, the Germans and Scotch-Irish were attracted to them due to their proximity to the existing German/Scotch-Irish population centers in the Shenandoah Valley. However, they also were by far a minority in the county (comprising only about ten-percent of the population) and other than

**United States Department of the Interior

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 383

providing progressive agricultural ideas, they did not have a noticeable impact on the district's landscape.

Like the early cultural and geographic divisions that were found between the eastern and western halves of Albemarle County, divisions were also quickly established within the eastern portion. The northern half (which includes the Southwest Mountains Rural Historic District) and the southern portion (the Southern Albemarle Rural Historic District) were originally separated physically by the Rivanna River. This geographical division was soon reinforced by the establishment of the Three-Notched Road, which paralleled the river. The fractious nature of the region was recognized politically in 1761, when the northern Fredericksville Parish was split from the southern St. Anne's Parish. The older St. Anne's Parish, which included the entire historic district, had two established churches in the district; Ballenger's Church and the Old Forge Church. The churches remained intact through the Revolution, but declined after state sponsorship was ended with the Act of Disestablishment. Neither church remains standing, but the sites of both are located in the district.

Early Development of the Road System

Because a vast majority of the early economy of the region was dependant on the exportation of tobacco, the early roads in the district were quickly established to tie the large plantations to ports on the James River. The fairly sophisticated system of roads that developed was primarily created to aid in moving the large hogsheads of tobacco to the river ports. However, roads were also laid out to provide an overland trade link between Richmond and the Shenandoah Valley. In addition, because Albemarle's location west of the fall line made river navigation unpredictable throughout much of the year, the roads would prove to be immensely important to the early development of the district.

One of the first tasks undertaken by the newly established local government was the appointment of surveyors to lay out a system of roadways within the vast wilderness. The first appointed surveyors for Albemarle, James DeFoe, Charles Lynch, and John Woody, were aided in the construction of the roads by the legally enlisted help of all male tithables living along the routes.¹⁰ Due to its proximity to the economically important James River, one of the region's earliest routes, River Road (Route 626), was established in 1731 to connect Goochland Courthouse to the mouth of the Rockfish River. The early completion of the River Road, coupled with the adjacent river, also helps to explain the early rapid settlement of southeastern Albemarle County and indeed a majority of the early patents in the area date to after 1731. Other routes in the district were established soon thereafter, including privately financed routes. By 1737, Secretary John Carter developed the Secretary's Rolling Road as a route to move his tobacco hogsheads to the Bremo Plantation port in neighboring Fluvanna County (and later extended to the Lower Secretary's Road to access Carter's Tye River plantation in Nelson County). The Secretary's Rolling Road followed the ridges between the Rivanna and Hardware Rivers and demonstrates how the routes of the early roads were established according to local geography. Peculiar curves, however, were often present, not due to geographical obstacles, but due to a law that forbid a road to transverse through any fenced property.

Similarly, Martin King cleared what became Martin King's Road near Woodridge in order for his goods to reach a port on the Rivanna River at the village of Union Mills in Louisa County as well as the Louisa Courthouse. Another important early road was Mountain Ridge Road, which developed in 1736 and was later extended into,

Section 8 Page 384

and remained, the Three Notched Road in 1742. This road was an important east-west route running along the north side of the Rivanna River.¹¹ This vital and influential artery linked the northern and southern halves of the county to Richmond by land. A road order in 1745 extended a route from the Three Notched Road near Shadwell to Carter's Bridge, following the east side of Carter's Mountain. In 1746, a precursor to Route 20 was established accessing Carter's Bridge and the Secretary's mill from the north. It was then extended to reach the courthouse on the James River, serving as a stage road. Another road established in 1747 was a road running from Martin King's Road to James Taylor's ford along the Hardware River.¹² Additional roads were established and by 1748 the general network of roads throughout Southern Albemarle County was fairly well established.

The late eighteenth century also saw the construction of bridges in the district, even though fords remained the most prevalent means of river crossing. The Carter's Bridge area featured two early bridges over the Hardware River, while Christopher Hudson built a third bridge over the Hardware near his Mount Air plantation. A fourth bridge was built across Moore's Creek on the Scottville Road. All of these bridge sites lay within the boundaries of the Historic District and only one other eighteenth century bridge, Free Bridge across the Rivanna, is known to have existed in Albemarle County.¹³ The almost exclusive placement of early bridges in the district relates to its burgeoning economy and trade as opposed to other regions of the county.

As surface routes became more established, the plantations slowly grew less isolated with citizens embracing the growing market villages and social/political centers. These routes, and the tobacco culture which spurred them, further helped to define the district by dictating the location of later settlement patterns, including the sites for plantations and farms, as well as stores, post offices, villages, crossroads communities, churches, schools, and taverns.

Even though a large overland transportation network had been established by the mid-eighteenth century, the roads remained difficult to pass even in the most favorable weather conditions. These difficulties made water travel a preferred alternative whenever water levels permitted. The Southern Albemarle region was fortunately sited between two rivers; the James on the south and the Rivanna on the north. To accommodate the increasing amount of tobacco which was being exported from the region, the James River was cleared for navigation further to the west by 1740. This feat considerably affected the region's development, including the establishment of important port towns along both rivers. By 1744, Scott's Landing (later Scottsville), Albemarle County's first governmental and social center, was established, and soon thereafter Warren and Howardsville began to develop.

As the westernmost navigable points along the James River, these villages spawned a lucrative trade economy by providing a link for trade between the Tidewater, Richmond, and the Shenandoah Valley. The prosperity that developed in these transportation centers, in turn, transformed the villages into important economic centers for the region as a whole. Furthermore, the success of these James River port communities spurred competitive growth along the Rivanna River at Milton; another important eighteenth-century transportation route on the northern edge of the district.

Revolutionary War Period (1776 to 1783)

By the time of the Revolutionary War (1776-1783), Albemarle County had been transformed from a speculative frontier settlement into an established, thriving agricultural, as well as intellectual, community. While the county

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 385

saw little action on home soil during the Revolutionary War, many of its distinguished citizens made political, military, and intellectual contributions to the cause. Of particular note, a handful of free black citizens were enlisted as Albemarle County soldiers in the Revolution, revealing that some emancipation had occurred by this point. In 1779, Hessian soldiers captured at Saratoga were transferred from Massachusetts to Virginia for imprisonment. While the prisoners were housed at the Barracks near Charlottesville, some of the officers enjoyed housing at hospitable county homes. Major General William Philips resided at Edward Carter's Blenheim plantation, while Colle hosted Hessian Major General Baron von Riedesel, who on occasion dined at Monticello.¹⁴ Monticello, home of Thomas Jefferson, who at that time was the Governor of Virginia, also played a small role in the Revolutionary War. British Lieutenant Colonel Banastre Tarleton attempted to raid and capture Jefferson at Monticello, after he and the legislature fled from Richmond. Tarleton's efforts were thwarted by the quick-riding patriot Jack Jouett who warned Jefferson of his approach.

During the Revolutionary War, Albemarle County, which remained almost untouched by the war, continued to grow and prosper. At this time the district was home to a number of the county's most prominent citizens. A personal property tax list from 1782 reveals that the county's three wealthiest residents all resided within the historic district boundaries, including Edward Carter, Esq., Thomas Jefferson, and Robert Carter Nicholas. Carter owned 237 slaves, 198 cattle, 62 horses, mules, and colts, and four wheels; owing 128.13 pounds in taxes. Jefferson paid seventy pounds for the possession of 129 slaves, 106 cattle, 23 horses, and six wheels, while Nicolas was taxed sixty-five pounds for his property that included 120 slaves, 65 cattle, and 29 horses.¹⁵

Economic and Cultural Success in the Federal Period (1783-1828)

During the post-Revolutionary War period, significant advancements in the district were stimulated by wheat production and the continued success of agriculture in general. The rise of agricultural production in the early nineteenth century had created a sizeable planter class in eastern Albemarle. Leading Albemarle County families, such as the Coles', Carters and the Jeffersons, developed large plantations with imposing manor houses and vast collections of supporting landscapes and outbuildings. Among these early plantation complexes are many of the district's most significant architectural resources, including Donegal (Oakland), Dawson's Mill Farm, Glendower, Morven, Bellair, Plain Dealing, Highland, Edgemont, and Redlands, to name a few. Additionally, the district was home to citizens who would play prominent political roles in Virginia as well as on the National stage. All of these economic, architectural and political developments unmistakably mark the Federal Period as the most important and significant period in the district's history.

Agricultural Development During the Early Federal Period

Much of the arable land in the region had been claimed for agriculture by 1790. At this juncture, Albemarle began to wholeheartedly convert from the monoculture of tobacco to a more diverse agricultural base led by the production of wheat. Although the wheat boom has been associated with the increased demand during the American Revolution, it was not until 1796 that the region appears to have fully adopted the new cash crop.¹⁶ However, tobacco remained an important commodity in the region well into the second half of the nineteenth century despite the sharp loss of British markets. Albemarle County historian, John Moore, points out that the differences between Tidewater and Piedmont culture was subtle, yet dramatic, creating a more democratic, agricultural-based society. He states that "Of utmost importance was the fact that upland tobacco, which usually

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 386

was too coarse, never produced great wealth. Within three or four decades Thomas Jefferson and his neighbors were searching for new crops to rejuvenate their troubled agricultural economy. In fact, they proclaimed loudly and with much truth that the rude plant was ruining their fields. In the absence of great fortunes there were no Westovers, no vast gangs of slaves numbering in the hundreds....It would appear that the local mansion houses that arose between 1780 and 1850 were paid for, not by agricultural produce alone, but from income derived from the sale of lands outside of Albemarle, shrewd investment in stores, canals, turnpikes, and railroads, and perhaps the loan of money to neighbors at exorbitant rates of interest.”¹⁷

It was noted that in Albemarle, “the vigor born of a frontier life was tempered by association with many of the best minds in the colony.”¹⁸ Albemarle’s agrarian culture remained dominant throughout the nineteenth century, due in part to the innovative farming techniques put forth by the county’s leading citizens. Thomas Jefferson was profoundly influential as a founding member of the nationally important *Albemarle Agricultural Society*, which also included James Madison, Thomas Randolph, John H. Cocke, and W.D. Meriwether, as well as others, as members. Chartered in 1817, the Society promoted agricultural improvements, which included the use of fertilizers, contour plowing, animal husbandry, and crop rotation. Progressively thinking, they also sponsored competitions for agricultural inventions, farm improvements, and restorations of worn-out land. Brought to the national stage through *American Farmer* and the *Richmond Enquirer*, the society was responsible for transforming the region’s farming practices from the traditional soil-decimating approach toward a more scientific and conservationist system of agriculture.¹⁹ The Society was also responsible for the first county fairs, beginning in 1825 and lasting until the 1840s. Agriculturally oriented, the fair promoted competition in horses, cattle, swine, sheep, agricultural implements, domestic manufactures of woolen and cotton goods. The Hole and Corner Club succeeded the Society. Additionally, the results of Jefferson’s own interest in agriculture, gardening, and landscape design came to fruition at Monticello. Many of his experiments are extensively documented through detailed journals and letters. Existing roundabouts continue to trace the field patterns that he used when experimenting with crop rotation. Jefferson’s influence in the district was profound, with many of the noted political and intellectual leaders of his day visiting Monticello to discuss a vast array of intellectual pursuits. His close friendships with James Madison (of nearby Montpelier) and James Monroe encouraged their participation in local affairs, with Monroe spending much of his life at Highland (now Ash Lawn-Highland), a property adjacent to Monticello.

Other intellectual advancements occurred in the first quarter of the nineteenth century that had a profound effect on the district. In 1819, the University of Virginia in Charlottesville was established, providing an intellectual nucleus for the rural agriculture-based county. The location in Charlottesville further boosted the town’s development as the county seat. Founded by Jefferson, the nationally significant University of Virginia stands as a monument to his intellectual, political, and architectural prowess. From its establishment to the present, the influence of the University has affected the district including its attraction to citizens, architects, and other professionals that have lived and worked in the district.

While Albemarle’s economy remained driven by the production of tobacco and wheat during the first half of the nineteenth century, other agricultural pursuits were increasingly important, including the rise of beef cattle production. Manufacturing facilities were also historically active in nineteenth century Albemarle County. By 1820, the county included ten tanneries, seventeen saw mills, seven tobacco factories, twelve flour mills, four

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 387

carding machines, a printing office, a hatter's shop, a carriage shop, and two distilleries.²⁰ There were also forty-eight mills and manufacturing facilities within the county, although two-thirds of those were located in the northern Fredericksville parish. Two distilleries also operated in Albemarle in 1820, including one at Warren. Joseph Martin's *Gazetteer* notes that the 1830 population for Albemarle County was 22,618. By 1832, Martin reveals that there were 6,439 slaves, 5,276 horses, sixteen studs, ninety-six coaches, forty-three carry-alls and forty-seven gigs in the county.

Commercial and Industrial Activity

Almost from the beginning, residents of Albemarle County actively pursued alternative methods to achieve economic stability outside of the plantation complex. Transected by the numerous rivers and streams, Albemarle County developed an important milling industry soon after the area's settlement, which aided in the growth of the local economy. Many of the early landholders established mills, including John Carter at Carter's Bridge and William Harris on Green Creek, among others. Although industrial in nature, the milling industry was tied directly to the production of natural resources within the region. As the amount of wheat and corn grown in the district increased, so did the number of grist and flour mills. Other industrial practices still based on the natural resources of the land, include sawmills, brickyards, slate and soapstone quarries, tanyards, cotton mills, and distilleries. Both Warren and Milton also boasted tobacco warehouses and inspection stations in addition to mills, making them important concentration points for both of the region's primary agricultural commodities.²¹ Finally, America's wine industry began at Colle Plantation in 1774. Count Philip Mazzei of Italy, a friend of Jefferson's, experimented with viticulture, establishing America's first wine company, whose shareholders included George Washington, George Mason, and Thomas Jefferson. Mazzei initially purchased 400 acres near Simeon, but Jefferson added an additional 2,000. Cultivating both wild and domestic grape varieties, Mazzei began to prove successful in the venture before deploying to Europe as a spokesman during the Revolution. In his absence, the wine company and vineyards were completely destroyed.²²

The Growth of the River Trading Towns

The continued growth of agriculture and trade aided in the growth and prosperity of the port towns along the James and the Rivanna rivers. Villages along the Rivanna, including Milton, Shadwell, and North Milton, all had the additional benefit of the establishment of a sluice and a canal at Milton Falls; as well as close proximity to the Three Notched Road and the plantations of the Southwest Mountains region. These improvements were sponsored by Thomas Jefferson and Thomas Mann Randolph and further opened the river to bateaux traffic. The success of Milton, and marginally of North Milton and Shadwell, would soon spur a competition between the Rivanna port towns and Charlottesville, which worked to develop its own port named "Port of Piraeus". The towns located along the James River continued to thrive in the last quarter of the eighteenth century, with the canal system there being the first in operation in the nation. These towns included Scottsville, Warren, Howardsville, and the town of Hatton, which later grew around the milling industry at Hatton Grange.

Warren, located at the mouth of Ballenger's Creek, was laid out with a small number of lots and dwellings. The impetus for the town's settlement arose in 1791 as an attempt to establish a transportation and shipping center to rival Scott's Landing and Milton. Growth was spurred by the thriving local flour-milling and distillery business of Wilson Cary Nicholas of Mount Warren.²³ A large stone tavern was erected in the village by Jacob Kinney,

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 388

while a mill and distillery were run by Samuel Shelton. Nicholas also built a tobacco warehouse in the small river port. Dependent on Valley wheat for his mill and distillery operations, Nicholas envisioned gaining control of the Valley trade and creating a thriving James River town. Although never to be a large town, Warren enjoyed local prominence as a tobacco port, with successful supporting businesses. Warren was incorporated in 1795 and Nicholas went on to focus his energies on establishing a road from the Shenandoah Valley to Warren. Road orders from 1791 reveal that the route he proposed incorporated some existing roads and roughly ran from Milton's Ford near present-day Alberene, down Colonel Coles' Church Road, past Esmont Plantation, down the Irish Road to Tuley's Hill (Porter's) and Glendower. The final section was to extended from Dyer's Store and ended at "the Town of Warren."²⁴ Nicholas' efforts eventually materialized and the project officially became known as the James River Turnpike in the 1820s. However, Nicholas, who served as Governor of Virginia, had by then turned his attention to politics and the route of the turnpike changed so that it was ultimately terminated at Scottsville. Because the town never established a major overland transportation link with the valley, it never grew beyond a local trading center. Interestingly, Warren has also been revealed archaeologically as one of the Late Woodland period village settlements of Native Americans along the James River, representing the aboriginals' shift to river-located village settlements.²⁵

Howardsville, located at the mouth of the Rockfish River, was established on the James River around the West Cote plantation of Allen Howard, who had patented much of the surrounding land. Initially a small settlement of a few houses and a store, Howardsville later enjoyed success with the rise in dominance of the canal system. An early commercial enterprise at Howardsville was started by Charles Irving, a Glasgow merchant who married a Jordoun of Locust Hill. Residing at his uxorial Locust Hill, Irving established a mercantile store in nearby Howardsville.²⁶ Court records reveal that Irving's Store was in operation prior to the American Revolution. The town prospered by the mid-nineteenth century, featuring a bank, three hotels, general stores, churches, a Masonic hall, and a number of dwellings.

Hatton, the smallest of these villages, emerged around the milling industry at Hatton Grange and the nearby ferry landing. As seen surviving at the site of the village, and on the 1907 Massie map, it once contained a store/post office and several dwellings. Similar to Warren, Hatten lacked an improved road to link it directly to the Shenandoah Valley, so it also never was to achieve the economic success of Milton or Scottsville. However, the ferry, which still operates today, ensured that the village never disappeared completely from the landscape.

Rivanna River Villages

The success of the James River port communities, as well as the establishment of canals at the falls near Richmond, spurred competition from landowners along the Rivanna River. Spearheaded by the Rivanna River Navigation Company and Thomas Jefferson, the village of Milton was established in 1789 to help landowners profit from the growing trade networks. The new port town on the Rivanna provided a centrally-located shipping port in close proximity to the growing city of Charlottesville, the Southwest Mountains region, as well as providing a second major port for Southern Albemarle. Located on 100 acres of Bennett Henderson's land known as "The Shallows," Milton was sited at the Rivanna River's natural head of navigation and laid out in half-acre lots.²⁷ In 1789, early land owners included Christian Wertenbaker, Joel Shiflett, Edward Butler, Richard Price, James Key, John Key, William Clark, Jacob Ogelsby, George Bruce, and Joseph J. Monroe. The town had

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 389

an ambitious start and quickly became the one of county's main commercial hubs. It eventually came to serve as the primary shipping point for almost three-quarters of Albemarle. By the mid 1790s, the young town boasted dwellings, mills, warehouses, inspection stations, and other businesses that supported the bustling economy, which was focused primarily on tobacco warehousing, wheat processing and shipping. At this time Milton was as large as Charlottesville and a more important commercial center. Establishments in the town included Henderson's tobacco warehouse, Henderson's merchant mill, Fleming and McClanahan, Henderson and Conrad, Peyton and Price, Divers, Rives and Company, Brown, Rives, and Company, Martin Dawson, William and Julius Clarkson, and David Higginbotham and Company, among others. However, the growing dominance of wheat production and transportation is what really escalated Milton's prosperity. The location of Milton also provided one of the few crossings for the Rivanna River, with McGehee's Ford located near the town. Jacob Ogelsby operated a ferry at Milton as early as 1794 and a school existed by 1806.

The town of Milton continued to thrive until improvements to the Rivanna River by-passed the port. The improvements were organized and promoted by the Rivanna Navigation Company, which was established in 1806. Its goal of opening the Rivanna to Charlottesville was reached in 1812, a date which also marks the official beginning of the town of Milton's decline. However, an 1815 account of the county by Christopher Ebeling reveals that the early nineteenth-century character of Milton was still intact during his visit. He states that the town contained "about twenty-five houses, a post office, a public tobacco warehouse, a tobacco display besides a grain display. There is here in general a repository of local products which are traded in the same way as at Charlottesville [a town that is described as having about three hundred residents]." ²⁸ By 1835, Milton had declined to "16 dwelling houses, 2 mercantile stores, and 1 tanyard. There was also a grist mill and Baptist Church across the river. The population consisted of about sixty whites and ten free blacks." ²⁹ The rate of decline continued into the middle of the nineteenth century. Finally, after a flood in 1870 destroyed a majority of the settlement's structures, it was no longer even recorded as being a town.

The success of Milton spurred the development of two other shipping towns along the north bank of the Rivanna; North Milton and Shadwell. Both shipping center sites are included within the boundaries of the Southern Albemarle Rural Historic District. The town of Shadwell developed near the river around the circa 1757 grist mill established by Peter Jefferson. Its initial setting was also influenced by its location near the intersection of Three-Notched Road (Route 250) and Old Mountain Road (Route 22). Although the mill was destroyed by floods in 1771, Thomas Jefferson rebuilt the mill and expanded the potential of the site with a canal on nearby high ground. The mill complex included a toll mill, a sawmill, and a flour mill. Shadwell was described in 1835 as featuring a carding factory with almost 100 workers, a sawmill, several general stores, shops and dwellings; all located near the Rivanna River. The cotton factory has been investigated by archaeologists from Monticello. Around 1850, the factory burned and was abandoned instigating a rapid decline of the village. Later in the mid-nineteenth century, the village of Shadwell shifted from its early riverside location to the Three-Notched Road (Route 250) and Louisa Road (Route 22) location to take advantage of the new railroad. The new site, once called Shadwell Depot, is located just between the Southwest Mountains and Southern Albemarle Rural Historic Districts.

The town of North Milton was located on the lands of Thomas Mann Randolph, part of a large land grant

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 390

acquired by William Randolph of Tuckahoe Plantation in 1735. Thomas Mann Randolph, after seeing the prosperity and economic success at Milton, decided to attempt to mimic Milton's achievements by establishing a rival town on the northern banks of the Rivanna River. Because North Milton was closer to the busy Three Notched Road, Randolph wagered that his town would quickly overwhelm the existing town of Milton. Specifically, he thought North Milton would "grow to considerable size as from the nature of the country around the river and the course of the roads" since "much more than half of the produce actually received at Milton arrives from the opposite side of the river." Forty-six men petitioned for the establishment of North Milton, and in 1800 the town was officially established. A few buildings in the new village were quickly constructed and by 1802 Randolph owned a storehouse, a dwelling, and a lumber house. Furthermore, by 1810 he had constructed a stone warehouse and owned a tobacco warehouse and inspection station. However, only one lot was ever sold and Randolph's vision was never realized. He later relocated from nearby Edgehill and made the property his home. All that remains of the town is located at the Clifton property.

Transportation Improvements during the Federal Period

In response to Albemarle's agricultural prosperity, and to the increase in trade originating in the Shenandoah Valley, existing transportation routes were improved and new ones were created during the early nineteenth century. Many of these improvements were aided by the Fund for Internal Improvements created by the Virginia General Assembly in 1816. The fund would spur the development of turnpikes as well as canals and, later, railroads across the state. The first major new transportation route in the district to take advantage of the fund was the circa 1818 Rockfish Gap Turnpike. This connection was envisioned to directly link the Shenandoah Valley to Scottsville, and thus Richmond. In 1826, the Staunton and James River Turnpike, as the Rockfish Gap turnpike came to be called, was successfully completed, a feat which greatly boosted Scottsville's economy and its development as a port town. Other transportation improvements in the early-nineteenth century focused trade and travel through both Charlottesville and Scottsville, which resulted in the slow decline of the two other main centers of trade; Milton and Warren. However, the new transportation routes resulted in the development of small crossroads communities throughout the district. Many of these villages, such as Glendower, Keene, and Boiling Spring, were never to rise to the prominence once held by Milton or Warren, but they have, however, remained visible historical references on the landscape.

Architectural Improvements in the Early- to Mid-Nineteenth Century

In addition to promoting the development of towns and villages, the growth of agriculture and trade in the district resulted in significant increased wealth for local citizens. This wealth stimulated the construction of a collection of high-style Federal and Classical Revival houses unrivaled in the state; including the dwellings at Edgemont, Mountain Grove, Redlands, Enniscorthy, Estouteville, Morven, the renovations to Monticello, Bellair, and Esmont, among others. These architectural masterpieces defined a gentry class that maintained a substantial amount of political and economic power in the Colony. Prior to the turn of the nineteenth century, many of the buildings, such as Bellair and Plain Dealing, exemplified the form and style of a generalized late-Georgian, early-federal style that was found throughout the larger Piedmont region. However, beginning around 1800 the growing influence of Thomas Jefferson and his interpretation of British Palladianism began to have an impact on the district. About circa 1800, dwellings such as Redlands, Mountain Grove, and Edgemont started to feature

**United States Department of the Interior

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 391

classical proportions and floor plans based on rational geometric shapes. The dwellings initiated the development of what would become the largest collection of houses in the United States to use a style sub-type known as Jeffersonian Classicism. Other examples of houses reflecting Jefferson's influences are Esmont, William Walker House, Monticello, Estouteville, Sunnyfields, and Tallwood, among others, which were constructed by his skilled workmen.

Re-entrenchment and Decline: The District in the Antebellum Period

While still reaping the benefits of wheat production, the 1830s marked the beginning of a decline in the prosperity for the district and Albemarle County as a whole. The western frontier had moved significantly westward and the young able-minded "men on the make" followed their own destinies, just as their ancestors had done settling Albemarle County just a few decades prior. Additionally, the advent of the railroad would effectively by-pass Scottsville and anoint Charlottesville as the region's principal population center. Finally, the district's average, and often over-worked, soils could not compete with the fertile fields of the Shenandoah Valley and the productive farmlands being brought into cultivation further west.

Slavery in the Mid-Nineteenth Century

Even though the population of the county continued to increase between 1820 and 1860, its rise was sluggish due to the Great Western Migration. More specifically, the number of enslaved persons also increased during this period, despite the adoption of less labor-intensive and diversified agricultural practices. Indeed, slavery was still widespread in the district and, as 1850 census records reveal, of the 943 farmers in the county, 743 were slaveholders.³⁰ By 1860, the slave population had increased to over sixty percent of the 22,924 persons living in Albemarle County. As the economy of the county was largely agricultural, the majority of slaves worked as field hands, although skilled craftsman and domestic servants were also significant in number. Significantly, of Monticello's slave population, at least half were skilled laborers and craftsmen, demonstrating that the diversification that had come to the region's agriculture had also affected its enslaved laborers.³¹

While there were free African Americans in the county throughout this time, they represented less than three percent of the population during these years.³² The very small free African-American minority was primarily due to a law requiring relocation from Virginia within twelve months of freedom.³³ Albemarle County census records for 1850 reveal that most free African Americans were farmers or domestic servants living not in the cities or villages, but in small rural African-American enclaves, including the establishment of Free State in central Albemarle, or in scattered dwellings. In 1850, there were there were 104 free black households in the county. After the Civil War, the numbers of rural free black communities would increase and persist in the district, eventually including Porters, Rose Hill, Chestnut Grove, and Blenheim.

Antebellum Transportation Expansions

Despite the slowing economy, the district did continue to expand industrially and commercially, mostly as a result of continued efforts to improve transportation. By 1840, Scottsville featured the James River and Kanawha Canal, which was envisioned to extend eventually from Richmond, VA to Covington, KY on the Ohio River; linking Eastern Virginia to the Midwest. The canal increased trade on the river by allowing free travel when the James River's water levels were too low to navigate. For a brief period this canal brought unprecedented

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 392

prosperity to both Scottsville and southeastern Albemarle County as a whole. Reaching Lynchburg by 1840, the canal was eventually extended to Buchanan, but the juncture with the Kanawha River in West Virginia never materialized. In part, the failure to make this vital connect was due to the rise of the railroad.

Efforts at improving turnpikes were also made during this period, although the improvements did not bring much success. In 1847, the Staunton and James River turnpike was reorganized with the headquarters of the company moved from Staunton to Scottsville. Improvements were made to the road, but the choice of planks over macadam proved to be a crippling one and signaled the beginning of the turnpike's decline. The turnpike era in the district lasted until after the Civil War when many fell into disrepair with the lack of the money for maintenance and the continued rise of the railroad.

Given the railroad's effect on the trade flowing through the canals and over the turnpikes, Scottsville's period of success began to wane in 1852 when the Louisa Railroad Company, which had arrived in Charlottesville by 1850, finally reached the Shenandoah Valley. The ascendancy of the railroad marked a profound change in the development of Southern Albemarle, as most of the rail routes by-passed the once commercially vibrant district. One exception was the Richmond and Allegheny Railroad that paralleled the James River, connecting Howardsville to Scottsville. While other parts of the county experienced great development with the establishment of railroad communities, Southern Albemarle remained a rural agrarian region. The district would also not see the rise of railroad related villages, such as Ivy, Keswick and Cobham, which were common in other parts of the county. One exception was the establishment of a railroad depot at Shadwell. However, the center of the town shifted from the river to an area just north of the district in order to accommodate the railroad. Significantly, despite a direct route through the district, the railroad did stimulate agricultural production in eastern Albemarle, greatly helping the region's overall economy and continued agricultural preeminence.³⁴

Antebellum Commerce, Industry and Agriculture

Although the district historically sustained an active agricultural economy, manufacturing was on the rise in Albemarle County by 1840. A sampling of the agricultural census that year reveals a cotton manufacturer (1), tanneries (13), distilleries (4) producing 1,900 gallons of distilled spirits), flour mills (15), gristmills (51), and sawmills (46), among other industries throughout the county. However, these enterprises were primarily related to the processing of the district's agricultural production and natural resources. In the early 1860s, the county's economy had also begun to decline, but records reveal that flour and gristmills (34), saw/lumber mills (16), and plaster mills (4), among other industries, were still in existence. Albemarle County was also home to a small number of successful manufacturing establishments in the 1860s. The greatest number of these was devoted to the milling of flour and meal, but also included cooperages (1), woolen goods (2), boots/shoes (5), leather (6), and (1) thresher/agricultural implement shop. The records do not relate which of these establishments were in the district, but the preponderance of mills marked on later maps suggests that extensive processing of raw materials was occurring in the district.

Agricultural pursuits remained dominant at mid-century with tobacco, wheat, Indian corn, and oats being the principal crops cultivated. Additionally, there was a surge in tobacco production and profitability by 1860 due to improved market conditions, the widespread use of fertilizers, railroad and canal systems, and favorable weather

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 393

conditions.³⁵ The county produced 1,456,000 pounds of tobacco in 1850, rising to 5,429,395 pounds in 1860. This helps explain Scottsville's continued rivalry with Charlottesville, despite the fact that Scottsville's population was only a little over a third the size. Charlottesville featured 1,890 residents versus 666 in Scottsville. By the Civil War, Albemarle County was also at the forefront of livestock production in Virginia.³⁶ This early focus on livestock would continue to grow throughout the late-nineteenth and early-twentieth centuries.

The list of county voting districts in 1850 reveals that Southern Albemarle continued to hold its place as the county's most populated region. Of the twenty districts on the list, six were located with the district's boundaries, including Porter's, Warren, Milton, Scottsville, Monticello House, and Howardsville.³⁷ An Albemarle County map from 1859 reveals that the most prominent communities within the district included Milton, Carter's Bridge, Sewell's Bridge, Howardsville, Warren, Scottsville, and Shadwell. The district also remained a center for wealth in the county, including the long line of wealthy landowners of the Coles and Carter families. However, in 1860, the wealthiest individual in the county was William P. Farish, a stage road entrepreneur who lived at Hillcrest (002-5045-1592). He owned 131 slaves and had an estimated worth of \$309,760.³⁸ The Coles family as a whole, however, was by far the wealthiest in the county and was valued at more than \$800,000.

Civil War and its Aftermath

Beyond the destruction of much of the James River and Kanawha Canal, as well as Scottsville's warehouses, factories, and stores by Major General Philip Sheridan, the district did not witness any major action during the Civil War. Instead the war's impact was most heavily felt on the region's economic viability, including a profound change in culture that came with the abolishment of slavery. Additionally, many of the district's estates were plundered, as many were directly located along Sheridan's route from Charlottesville to the James River. John Moore accounts that "food was seized, storehouses and homes broken into, horses taken, and slaves by the hundreds joined the triumphant army."³⁹ The estate of Scotland was burned, while Monticola was ransacked, the mill at Hatton Grange (Mountain View) was ruined, and in Howardsville, Sheridan and his 10,000 Union troops "pilfered homes and stores, destroyed a mill and tannery and made himself more infamous by stealing blooded horses and shooting their colts in the fields."⁴⁰

The most significant result of the war, other than emancipation, was its effect on the economy. With the destruction of the transportation routes and the slow construction of a new labor system, the district's economy came to a grinding halt during the war and reconstruction period. However, the district retained its stature within the context of Albemarle County. Three of the county's top four wealthiest citizens lived within the Southern Albemarle district, including Samuel Moon, Peyton S. Coles, and T.S. Coles. The depression in the local and regional economy following the Civil War can be seen in the limited building construction during this period. Notable exceptions to this trend are the African-American villages that were established and flourished after the war when freed African Americans were a majority in the county's population. Rose Hill, Porter's and Blenheim are surviving examples of these post-Civil War settlements.

The continued decline of wheat's profitability, due to a combination of smaller farm parcels and the increased production in the Midwest, also slowed the economy. The district responded by further diversifying agricultural

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 394

production during the reconstruction period. Included in the new agricultural pursuits were sheep husbandry, orchards, vineyards, and beef/dairy cattle operations. The new diversified agricultural patterns affected the landscape by turning the large tobacco and wheat growing tracts into pasture land and orchards. Coupled with an influx of Northern capital, these diversified agricultural pursuits slowly spurred the local economy in the decades following the Civil War. While the damaged canal along the James River was rebuilt after the war, it never regained its pre-war profitability and limped along until the late 1870s. Instead, the railroad continued its ascendancy, which resulted in the continued decline of Scottsville.

An 1864 map of Albemarle County by Major General J.F. Gilmer, shows Scottsville, Warren, Howardsville, Woodridge, Milton, Shadwell, and Porter's Precinct (previously referred to as Toley's Hill) as the most prominent communities. Mills include North Milton, Farish's at Moor's Creek, Timberlake's, Jones', Johnson's, Albemarle Mills, Dillard's, Warren, Gilmer's, Gilmer's sawmill, and Scottsville, among others. Churches are also shown on the map, including Howardsville, Sharon, Mt. Zion, Warren, Woodlawn, Christ Church, two African Churches, BMH Church, and Temple Hill Church. The map is interesting as it depicts woodland and pastures, with much of the district still covered in vegetation.

In 1870, the county's total population was 27,544, of which 12,500 were white and 14,994 were black. The Peyton Green Map of 1875 shows an increase in the number of mapped crossroads and villages, suggesting a rise in population, as well as stores and mills. The major villages are unchanged except for the crossroads community of Woodridge located at the intersection of Martin King's Road and the Secretary's Rolling Road. The map denotes mills, which include North Milton Mills, Coles Mill, Johnson's Mill, Diggs Mill, Rives Mill, Staples Mill, Glendower Mill, Lewis Mill, Gilmer Mill, Harris Old Mill, Family Mills, and Stovers Mill. A sawmill is also noted on Carter's Mountain. Stores include Stuarts' Store near Colle, Harlan's Store near Boiling Spring, Coles Store near Estouteville, and Eubanks Store near Beaver Dam. Distilleries, churches, quarries, shops, prominent estates, and other property owners are also listed.

Late-Nineteenth Century Economic Prosperity

It was not until the late 1870s and early 1880s that the district again began to witness renewed prosperity through the infusion of capital and immigrants from the northern states. Additionally, the location of mineral deposits, instead of transportation routes, would begin to dictate the establishment of new settlements in the district. These deposits, consisting of slate and, more importantly, soapstone, would redefine the character of the district and shape its development into the twentieth century. Significantly, despite this important industrialization trend, the district remained overwhelmingly agricultural.

Soapstone Industry, Alberene

The widespread impact of northern industrialization was instrumental in the rise of the soapstone industry, whose quarries further helped to spur the local economy. In Alberene, the soapstone business prompted the growth of the whole mill village from the quarry, to the industrial machine shops, to the manager's row and worker housing.

Although Native Americans in Albemarle County had used soapstone for generations, it was not until the early 1880s that the mineral spurred an enormously prosperous commercial industry in the area. The mineral, a

Section 8 Page 395

hydrous magnesium silicate form of talc, was used extensively in the building industry and was primarily quarried in New Hampshire and New York prior to the discovery of the Virginia quarries. The dense, metamorphic stone is composed of magnetite, dolomite, chlorite, and talc. The softness of talc gives the material its soapy texture, which inspired its name soapstone. The ease of quarrying and the lasting quality inspired the substance to be used extensively as a building material for a vast range of purposes from floor stones and countertops to decorative architectural features like lintels, mantles, and door sills. Additionally, its extraordinary thermal property “makes it highly desirable for hearths, furnaces and culinary utensils. Its non-conductivity made it perfect for switch panels, circuit breakers, and other components in the burgeoning nineteenth-century electrical industry, while its resistance to acids and bases still makes it invaluable for laboratory sinks. And besides such industrial and practical home uses, soapstone’s lovely veining, range of hues, and softness have attracted sculptors since prehistoric times.”⁴¹

James Serene, who had worked in soapstone quarries in Frankestown, New Hampshire, established a plumbing and soapstone business in Brooklyn, New York, soon after the Civil War. The venture, established with Jacob York, was called the York and Serene Soapstone Works. In 1874, the business was amicably split, with Serene gaining control of the soapstone portion of the company. With dwindling supplies of the material in the Northeast, Serene was forced to seek new sources. He visited Albemarle County, which he was familiar with after serving in the army, where soapstone had been used for sills, hearthstones, and fireplace linings for years. Additionally, the mineral was widely used for foot warmers in carriages, sleighs, and beds.⁴² Serene was shown large outcroppings of the stone near Johnson’s Mill Gap on the east side of Fan Mountain in the Ragged Mountains. Impressed with the quality of the local stone, Serene soon established a new soapstone company in Albemarle County. Partnering with a successful box manufacturer from New York named Daniel J. Carroll, and affiliating with a financier named John G. Porter, Serene established the first large-scale commercial soapstone business in Virginia in 1883, known as the Albemarle Soapstone Company. The company was established on an almost 2,000-acre tract known as Beaver Dam Farm, which they purchased for \$30,000. After gaining clear title to the land, Serene opened the first quarry in 1884. It was soon discovered that both the quality and extensiveness of the Albemarle crop of stone was even greater than originally thought, stretching across an almost fifty-mile vein. Luckily for Serene, the vein, which became known geologically as the Albemarle-Nelson Belt or the Lynchburg Belt, is reported to be the largest deposit of soapstone in the world, extending from Albemarle County through Nelson and Amherst Counties to Campbell County. The scarcity of soapstone suitable for commercial purposes, on a worldwide scale, made area business endeavors even more lucrative.

Daniel Carroll, a business entrepreneur and marketing strategist, decided to promote the local stone with the distinctive trade name of “Alberene,” a contraction of the names Albemarle and Serene. Changing the name of the company and town to Alberene, Carroll and Serene were wildly successful with their company, manufacturing a vast array of products, ranging from laundry tubs, stair treads, window sills, fireplace surrounds, and elaborate architectural features, to laboratory equipment and electrical industry components, to headstones and funerary slabs. Alberene was established as a typical company town with a manager’s row of high-style dwellings (complete with elaborate soapstone detailing), smaller neighborhoods of company-owned vernacular dwellings with individualized names including Quality Row, Stumptown, Dogtown, Gospel Hill, Speartown, and Sunshine Hill, along with mills, assembly shops, stores, depots, and other company-related buildings.

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 396

Significantly, many of the buildings were constructed using scrap soapstone, especially the foundations and chimneys, as were the sidewalks that connected the buildings. The vastness of the company town is related in a December 1899 correspondence exchange between company officials Samuel Purcell, Secretary of the Alberene Soapstone Company, and George Bostwick, one of the domestic engineers for the company in New York. The letter lists the buildings on the site for valuation, which included a warehouse, depot, lumber, saw & grist mills, quarry office, old blacksmith shop, new blacksmith shop, a company dwelling house, the new machine shop, mill (under construction), a store, oil house and tank, boarding houses, numerous tenant houses, a barber shop, several barns, doctor's offices, the old boiler and hoist house, the new boiler & hoist house, a granary, a hay shed, a four-stall stable, and new tenement houses.⁴³

Many of the goods produced were rough-cut on site, but shipped to the company's New York, Boston, or Chicago locations for finer detailing. The main office in New York City served as the company headquarters and featured a large sales showroom, which sent products across the United States, to Europe, and to South America. By 1900, the Alberene location of the company included 250 employees.

In response to Alberene's success, other entrepreneurs began to realize the vastness of the area's soapstone vein and the lucrative nature of the business, providing competition to the Alberene Soapstone Company. Companies included the Phoenix Soapstone Company (later known as the Standard Soapstone Company owned by Nelson County industrialist Thomas Fortune Ryan), the Alberoyd Company of Esmont, the Piedmont Soapstone Company, the American Soapstone Company, the Charlottesville Soapstone Corporation of Esmont, and the Old Dominion Soapstone Company, among others. However, only one such venture truly rivaled the successful Alberene company. Undertaken by Captain James W. Foster and Carl A. Wiehle, the business was located in Nelson County, just over the Albemarle County line, in the village of Schuyler, where the vein of soapstone extended over two thousand feet in length and three hundred feet in width.⁴⁴ The mills at Alberene were retained for working the stone and a railroad line, the Nelson and Albemarle, was constructed to span the seven miles that separated the two company towns. Completed by 1906, the railroad included stops at Alberene, Coles, Esmont, Melvale, Damon, Ruffin, Schuyler, Bridgeport, Hamilton, and Rockfish.

The mills at Alberene continued to cut Schuyler-quarried stone until they were closed in 1916. After the closure of the Alberene site, much of the equipment and machinery was moved to Schuyler. Significantly, the company expanded further with the acquisition of the soapstone works at nearby Old Dominion, owned by the Old Dominion Soapstone Corporation, which included several quarries, a mill, and various real estate holdings. The company expanded again in 1918 with continued modernization of its mill works. In 1919, soapstone was reported as Nelson County's largest manufacturing industry, while Schuyler was listed as being the largest soapstone manufacturing plant in the world.⁴⁵

By the end of World War I, Schuyler's soapstone industry was experiencing unprecedented success, producing up to 70,000 square feet of finished material a month with an entire shop in Alberene devoted to the production of laundry tubs.⁴⁶ By 1925, the company was employing 1,000 workers with the thirty-fifth quarry in operation between Alberene, Schuyler, and Old Dominion. Local competitors continued to emerge, including Thomas Fortune Ryan's Standard Soapstone Corporation, located between Norwood and Arrington in Nelson County, and

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 397

the Alberoyd Company of Esmont in Albemarle County. Alberoyd, which attempted to cash in on the Alberene name, primarily marketed soapstone waste products, or dust, which was used for asphalt roll roofing, a fire retardant in mines, foam rubber molds, and pipe filler, among other uses. Due to this threat, Alberoyd was purchased by the Virginia Alberene Corporation and a dust plant was constructed at Damon to continue the manufacturing of this profitable by-product. Currently, a more extensive study of the state's soapstone resources is being conducted by the Department of Historic Resources. Once this report is complete, more extensive knowledge of Alberene, Damon, and Old Dominion's soapstone deposits may be discovered, allowing a modern investigation and assessment of the district's archaeological resources.

Slate Industry, Esmont and Slate Hill

Although not as profoundly successful as the soapstone industry, slate was another industrial pursuit that had significant economic success within the district. While a slate quarry was established in the early nineteenth century on the Esmont plantation, it was not until the late nineteenth century with the establishment of the Standard Slate Company that the operation gained widespread success. Overton, also known as Slate Hill for its association with the mineral, also featured a slate quarrying operation and pencil factory. The town of Esmont, named for Esmont Plantation where the town was founded, grew around this slate industry. The town itself developed in a linear fashion along a circa 1898 railroad spur line that connected Alberene and Esmont to the Chesapeake and Ohio Railroad.⁴⁷

The economy of Esmont in the early twentieth century was centered around slate quarrying, which is evidenced by the slate pier foundations supporting many of the town's historic buildings. Esmont was also a financial center for the region in the early twentieth century and holds one of only three historic banks in the county found outside of Charlottesville. The town also featured at least three stores, a railroad depot, an Episcopal Church and a high school. The site of the slate quarries still remains undeveloped and several, small dry-laid stone structures, along with the quarries themselves and railroad abutments, remain intact. Also similar to Alberene, Esmont features a large Victorian house that was built to house the manager of the quarry. The fortunes of Esmont paralleled those of Alberene, although the fact that the town had developed a small individually-owned commercial core allowed it to survive longer than its northern company-owned cousin. Today, the center of Esmont is the Esmont National Bank, which now serves as a post office. Currently a quiet residential village, the town as a whole has had trouble finding an economic rhythm for several decades. However, Esmont has retained a vibrant African-American population that was recently the focus of an oral history project sponsored by the Carter G. Woodson Institute. Through this project, and a collection of letters from the African-American educator Benjamin Yancey, Esmont has become a significant source of knowledge for those studying rural early-twentieth-century, African-American communities.

Post-Reconstruction Agriculture and Commerce

The industrialization that started in the late nineteenth century never expanded past the villages associated with the Alberene, Esmont, and Slate Hill quarries, although Damon and Old Dominion were also associated with the soapstone business. While the villages of Alberene and Esmont continued to prosper into the twentieth century, few other industrial changes were made to the farms and rural communities that make up the district. Instead, agriculture remained the prime economic force with the newly established orchard business producing apples and

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 398

peaches, viticulture becoming profitable (by 1900, census records reveal that there were 240,864 grape vines in the county), and a significant emphasis was placed on raising sheep and cattle (both for beef and dairy products). Horse breeding also took root in the region, although the *Albemarle Agricultural Society* had previously proposed the practice earlier in the century. One such specialty horse breeding operation, as revealed by John Moore, was undertaken at the Southern Albemarle estate of Ellerslie, owned by Captain R.J. Hancock.⁴⁸ An account of Ellerslie's success after the close of the Civil War, which undoubtedly mirrored other estates in the region, states that the "the stock fencing and agricultural implements were not in the best condition—for Sheridan had passed through the country. Additions have been made to the place until it now comprises 1,800 acres of land, a merchant mill, excellent barns, stables, &c. Every field and paddock is supplied with an abundance of pure water while there is not an acre of marsh land upon the tract. In spite of the vicissitudes of war and other pestilences, the farm for forty-seven years has made its own corn and provender, not a dollar's worth of either being purchased in that period."⁴⁹ By 1878, the estate featured forty thoroughbred race horses, including some that proved nationally successful. By the 1920s, neighboring Morven Farm also featured a renowned horse breeding farm, established by Charles Stone. Nydrie Farm produced two Kentucky Derby winners, Northern Dancer and Jet Pilot, as well as many other successful racehorses.

The continued agricultural success was noted in the 1880 census records, which reveal that Albemarle remained the fourth richest county in Virginia with a farm value of \$6,015,736. An 1888 account of Albemarle County states that Albemarle was unrivaled in its soil, climate, landscape advantages, and accessibility to markets, with corn and wheat the thriving crops.⁵⁰ The growing of cereal grains, stock-raising, dairying, and orchard production are also listed as important agricultural pursuits. In the 1880 census records, the county included 5,897 horses, 636 mules, 986 oxen, 4,834 milch cows, 7,617 other cattle, 10,832 sheep, and 20,302 swine. By 1887, the number of dairy and beef cattle had remained relatively constant with a value of \$260,000.

Chataigne's Gazetteer of 1884-1885 gives a general description of the district through its profession and commercial composition. J.L. Dawson and W.G. Murch were local magistrates, while Wingfield Brown was an attorney in Howardsville. Other listed professions include John Carter (distiller, Glendower), William Brown (Druggist, Howardsville), Peyton S. Coles (Druggist, Estouteville), and C.B. Davis and Son (Druggists, Woodridge). Coach and wagon builders in the district were located in Woodridge, near Hardware, in Howardsville, in Glendower, and Carter's Bridge. General Merchandise stores included ones at Hardware, Howardsville, Glendower, Warren, Woodridge, and Carter's Bridge, with most places having more than one establishment. Three hotels were located in Howardsville, with an iron foundry and liquor dealer also in business there. A millinery was located in Warren. Primary corn and flour milling establishments were in operation at Shadwell, Glendower, Estouteville, Howardsville, Woodridge, Carter's Bridge, and Warren, while saw mills operated at Estouteville, Woodridge, and Carter's Bridge. The mills at Glendower, Woodridge, and Carter's Bridge featured millwrights. Physicians were located in Carter's Bridge, Howardsville, Estouteville, and Warren. Woodridge also included a saddlery and undertaker. Estouteville featured a wood dealer. A listing of principal farmers is given for Carter's Bridge, Estouteville, Glendower, Howardsville, Shadwell, Simeon, Warren, and Woodridge; revealing the prominence of these villages in the mid-1880s.

The 1907 Massie map of Albemarle County reveals the district's primary early twentieth century villages and

Section 8 Page 399

post offices, which include Milton (Voting Place), Simeon, Woodridge (Post Office), Overton (Post Office), Carter's Bridge (Post Office and Voting Place), Blenheim (Post Office), Alberene (Post Office and Voting Place), Glendower (Post Office), Keene (Post Office), Esmont (Post Office), Porter's (Post Office and Voting Place), Damon Depot, Damon (Post Office), Howardsville (Post Office and Voting Place), Fultown, Boiling Spring, Warren (Post Office), Hatton (Post Office), Stony Point, Browntown, and Shadwell (Post Office). The map also reveals the locations of both white and African-American schools, as well as the names of the prominent roads, waterways, land owners, estates, and mineral deposits. Mineral deposits identified in 1907 include soapstone, iron, limestone, red sandstone, brownstone, chlorite, amethyst, slate, mica schists, and graphite.

As Charlottesville developed into the region's unrivaled city-center in the early 1900s, the county remained predominately rural. The population of Charlottesville had risen to 6,449 in 1900, while the county as a whole featured 28,473 residents. The Scottsville magisterial district, which included most of the Southern Albemarle Rural Historic District, was the most populous of the six county districts with 6,645 residents.⁵¹ As better roads were created to access Charlottesville, many small general stores and villages throughout the countryside saw a steep decline in business, including Porter's and Milton, among others. By the mid twentieth century, Scottsville remained the only viably commercial center in the southeastern region of Albemarle. In 1913, a railway was proposed to link Charlottesville to Alberene, which would then link to the C & O railroad along the James River, but it never materialized. Charlottesville remained the vital rail link in the county and smaller rail stop communities expanded in response, including Shadwell. In response to the new transportation route, the village center shifted from the river to the railroad depot, located along the Three-Notched Road.

Agriculture in the first quarter of the twentieth century continued to dominate the rural economy with considerable progress made in farming methods. Non-population census records from 1920 show that the 3,165 farms in Albemarle County were worth \$28,189,780, with almost seventy percent of the population relying on agriculture for a living. That value ranked Albemarle sixth in the state for farm values. Farm size was smaller than previous decades, with the majority between 100 and 175 acres. However, there were 133 farms larger than 500 acres in the county. Approximately 464 of the farms were run by tenants in 1920, which declined from 590 in 1900. By 1910, the renowned Albemarle Pippin apple, made famous by Andrew Stevenson, began to be grown in commercial quantities in the county. By 1919, Albemarle was the third largest producer of apples in the state. Livestock values rose forty-seven percent between 1910 and 1920, with a total value of \$2,189,442 that year. Other important crops were hay, orchard fruits, corn, oats, and rye, with the production of beef cattle also important. Interestingly, 48,000 pounds of tobacco were produced, but Albemarle only ranked 38th in the state in production quantities. By 1921, Albemarle was the ninth wealthiest county in Virginia.

The late nineteenth and early twentieth century brought wealthy northerners and urban southerners who were attracted by the picturesque countryside.⁵² With this population influx, the late nineteenth and early twentieth century saw dramatic changes in the architectural development of the county, including the rise of the Country House Movement, which heavily impacted certain areas of the county, including Keswick and Greenwood. Interestingly, the movement does not appear to have had much of an affect on the overall landscape of Southern Albemarle. Two notable exceptions include the construction of Guthrie Hall and Nydrrie. Guthrie Hall was built in 1901 for John Guthrie Hopkins and features a quartz stone main dwelling designed by Stanford White of

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 400

McKim, Mead, and White. Complete with a private rail stop, the estate exemplified the tenants of the County House Movement. Similarly, Nydie was an exuberant fifty-room Scots Baronial castle on Green Mountain constructed in the Victorian mode (now demolished). Built in 1898 by architect D. Wiley Anderson of Richmond for Harry Douglas Forsyth of New Orleans, Nydie also featured an enormous brick stable complex which was also designed in the Victorian mode (still extant).⁵³ The grand stables also reveal the importance of the region's horse breeding economy.

With a shifted economy and a widespread lack of slaves and servants, the size and scale of housing during this period was, in general, much smaller than the grand dwellings of previous decades. However, the rural economy was again on the rise and impressive Colonial Revival-era estates were still emerging, including Coleswood, New Woodville, Maple Hill Farm, Fairview, and Lion's Watch, among others.

Education in Southern Albemarle County

Education in rural eighteenth-century Virginia was often limited to small in-home schools, private tutors, or field schools, and the history of education in Albemarle was no different. Formal school training was primarily limited to the wealthy, while those of more moderate means were taught basic reading and writing skills at home. A small handful of private academies also appeared in the county in the eighteenth century. The few fortunate enough to seek collegiate learning were sent away from Albemarle to renowned schools like the College of William and Mary in Williamsburg or to the Northeast.

Interestingly, despite the absence of an educational system, by the late-eighteenth century eighty-six percent of local land owners were able to sign deeds and possessed a basic educational proficiency. Although Thomas Jefferson proposed establishing a public education system, larger county schools were not initiated until well after the Civil War. By 1817, Central College opened in Charlottesville and was soon transformed into the University of Virginia. By 1840, there were thirty-nine schools (primary and secondary) in the county that educated 786 students. In St. Anne's Parish alone there were twenty-three schools, educating 442 students; resulting in a higher literacy rate in the southern half of the county.⁵⁴ By 1850, the State Literary Fund had been renewed to help educate the poor.

After the Civil War, Freedman's schools were established and an emphasis was placed on rural education. In 1869, the Freedman's Bureau repaired schools in Charlottesville and constructed one in Scottsville. Schools soon followed in Glendower and Mount Pleasant. However, census records from 1870 reveal that 10,000 of the county's residents, most former slaves, could not read or write.⁵⁵ The same year, Virginia instituted a public school system with fifty-seven schools throughout the county. Even with the new public school system, many wealthy students were still educated in private academies, while others continued to be educated at home.

Significantly, in 1913, Sears, Roebuck and Company President Julius Rosenwald initiated the largest single program benefiting public schools for African Americans in the South since the Reconstruction years. His private contributions and subsequent Julius Rosenwald Fund Rural School Building Program motivated rural communities desiring better schools. His program was a success and by 1928, one in every five rural schools for African-American students in the South was a Rosenwald school. Rosenwald schools housed one-third of the

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 401

region's rural African-American schoolchildren and teachers. At the program's conclusion in 1932, Rosenwald's financial aid had produced 4,977 new schools, 217 teachers' homes, and 163 shop buildings in 883 counties of fifteen states, representing a total investment of over \$28 million in contributions and tax revenues. Within the Commonwealth of Virginia, the Rosenwald Fund was responsible for the construction of 332 schools. The schools were constructed using standard plans, all of which include gabled roofs and banks of windows. Of the seven Rosenwald schools constructed in Albemarle County, only one is located within the district boundaries, the Scottsville School. However, the Rose Hill School and the Chestnut Grove School, also built for black students – while not constructed using Rosenwald Funds – are based on the same ideas and feature very similar plans.

By the 1920s, improvements to the school system were apparent and six accredited schools were located in the county, including one in Scottsville. Alberene, Esmont and Damon also featured unaccredited high schools. Although not located within the district boundaries, the University of Virginia in nearby Charlottesville continued to play a role in the intellectual process of the district.

Rise of Charlottesville in the Twentieth Century

By the 1920s, transportation networks were again expanding due to the growing popularity of the automobile. Automobile travel, road building campaigns, and the rise of truck farming also resulted in changes to the agricultural economy and the rural landscape. The widespread adoption of the automobile impeded development of rural towns, as local residents often bypassed regional rail stop towns and crossroads communities in favor of larger commercial interests in the city centers of Charlottesville and Richmond. As Charlottesville grew and prospered, the county grew more and more rural. Many once thriving crossroads communities, such as Porters and Milton, were abandoned as trains and automobiles zoomed by en route to the bustling city, by passing the once prosperous villages. Only small communities with gas stations really felt any resurgence during the early period of the automobile. As the small crossroads local communities declined, many schools and churches were consolidated and community life began to be centered in Charlottesville. The Good Roads Movement of the 1920s greatly improved prominent roads in the district, promoting tourism and truck farms. With the rise of the tourist industry and the nationwide lure of Monticello, tourism in the area was on the rise. By 1938, Monticello boasted over 8,000 visitors a year. However, agricultural pursuits remained the dominant economic force in the county. Corn, hay, fruit, dairy products, and beef cattle, as well as horse husbandry, were the dominant agricultural products from the 1930s to the 1950s. The cultivation of pulpwood rose drastically in southeastern Albemarle during this period as well, an industry that continues today.

The Great Depression, World War II, and a regional depression in land prices lasting until the 1960s further insulated the district from drastic change. Although the county did see two industries arise during World War II, including a rubber plant in Scottsville and a frozen foods company in Crozet, the Southern Albemarle district remained rural. This period is also marked by the slow decline and stagnation of the local economy. Exceptions include a continued influx of wealthy newcomers who contributed to the preservation and renovation of many of the area's early estates, particularly in the Green Mountain area. Many of the estate owners were wealthy part-time residents who wanted an idyllic pastoral retreat that remained in close proximity to Charlottesville, which had slowly risen to a prominent Virginia town. John Moore points out that Charlottesville, by 1945, "no longer saw itself as a potential rival of bustling Roanoke or a small Upper South Atlanta, but rather as a pleasant, well

**United States Department of the Interior
National Park Service**

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 402

balanced university community, a crossroads of tourism, the county seat of historic Albemarle, and above all else, a nice place to live.”⁵⁶ The county remains a rural extension of Charlottesville and this ideal.

Development from the Mid-Twentieth Century to the Present

The agricultural focus of the district’s economy reached its zenith at the end of the district’s period of significance. In 1950, one-third of the county’s work force was employed in agriculture, which dropped to less than fourteen percent by 1960, marking 1955 as approximately the year when the county’s agricultural dominance was overtaken by other industries.⁵⁷ The rise of Charlottesville as a regional city-center continues to support the rural economy and has helped preserve the rural areas of the county. This is significantly seen in the widespread promotion of landscape preservation with large conservation easement donations on the rise. Additionally, 2,000 acres in the district, including the Dawson’s Mill/Cool Springs and Seven Oaks properties, are held by the non-profit Wildlife Foundation of Virginia. Currently known as Fulfillment Farms, the holdings offer public recreational lands for hunting, horseback riding, bird-watching, hiking, and general outdoor recreation. Similarly, Pine Knot, a 90-acre tract, is significant as Theodore Roosevelt’s rural recreational retreat. It is owned by the non-profit Edith and Theodore Roosevelt Foundation, whose mission is to interpret the recreational and conservation qualities enjoyed by Roosevelt. Pine Knot is also under conservation easement.

Despite the subdivision of some parcels for suburban development, the district has remained primarily intact, with its historic development and agricultural past remaining at the forefront of its characterization. Farms and field patterns have remained relatively stable and little, if any, new development has been interwoven into the historic villages. Large tracts of land, while not wholly participating in widespread farming operations, feature cleared pastures and fields, resulting in a bucolic atmosphere of small farms and sprawling estates. Although some infill development has occurred, it is primarily located on the edges of larger tracts and along the more traveled roadways. Today’s farms, while still pastoral, are not the primary economic forces of the past, but their pastures are still used for sheep, cattle, and horses. Soybeans, corn, forestry, viticulture, organic farming, and hay are other commercial active agricultural practices. Plain Dealing Farm is a notable example of a twentieth century horse farm; horses and riders associated with the farm have competed in the Olympic Games. Although changes have occurred in the development of Southern Albemarle, the district retains a high level of integrity and historic association from the 1720s to the mid 1950s. While the rural region continues to evolve, its agricultural, architectural, social, and commercial history remains visibly intact; resulting in one of the best preserved landscapes in Piedmont Virginia.

POLITICS/GOVERNMENT
SOCIAL HISTORY

Eastern Albemarle County as a whole is intrinsically tied to the many prominent local, state, and national figures that historically shaped the region's development. The Southern Albemarle Rural Historic District is most notably associated with homes of two U.S. Presidents, including Thomas Jefferson at Monticello and James Monroe at Ash Lawn-Highland. Presidents Theodore Roosevelt and Franklin Delano Roosevelt were also frequent visitors to the district. Other prominent figures associated with the district include Colonial Secretary John Carter, Wilson Cary Nicholas, Governor Thomas Mann Randolph, Andrew Stevenson, and Senator Thomas Staples Martin, as well as the Carter and Coles families, among others.

Although numerous prominent Virginia families settled in the Southern Albemarle region, the most influential figure was **Thomas Jefferson**, third president of the United States. While his contributions to the founding of the new republic had a profound effect upon the world, his innovative architectural and agricultural pursuits also impacted the development of the district. Thomas Jefferson (April 13, 1743- July 4, 1826) was one of the most influential leaders in American history. He was born at Shadwell Plantation and resided for most of his life at nearby Monticello; his architectural masterpiece. Among his national accomplishments, Jefferson served as the principal author of the Declaration of Independence (1776) and was elected the third President of the United States (serving from 1801 to 1809). Jefferson also served in the Virginia House of Delegates, as Governor of Virginia (1779-1781), Minister to France (1785 to 1789) and first Secretary of State (1789–1793) under George Washington, and Vice President to John Adams (1797–1801).

Son of prominent Albemarle planter Peter Jefferson, Thomas Jefferson was educated at the Maury School near Keswick and the College of William and Mary. In 1772, Jefferson married Martha Wayles Skelton, with whom he had six children. Although his political contributions as a founding father of the United States were vast, Jefferson continued to be active in public affairs, including the founding of the University of Virginia in 1819. The architecture and curriculum were designed by Jefferson and it was, at the time of its construction, one of the largest construction projects in the country.

Jefferson was an accomplished architect who was extremely influential in the introduction of Roman/Palladian architecture in America. The style was associated with Enlightenment ideas of republican civic virtue and political liberty. Jefferson designed his home, Monticello, which included numerous inventions and improvements, among them: the great clock, a dumb waiter, automatic doors, and a portable copy press, among many others. His architectural ingenuity also included many innovations, including the terras roof; which was used at Monticello, Bremo, UVA, and Montpelier. Jefferson also designed his rural retreat, Poplar Forest in Bedford County, the Virginia State Capitol building, the University of Virginia, as well as providing architectural drawings and designs for numerous public and private projects. Influences of Jefferson's Palladian-inspired neo-classical design idiom can clearly be seen throughout the district's architectural fabric, including Monticello, Edgemont, Estouteville, and the William Walker House, among others, while his leadership in the *Albemarle Agricultural Society* greatly impacted the agricultural landscape. Today, Monticello and the University of Virginia are together one of only six man-made World Heritage Sites in the United States.

Other significant interests and contributions of Jefferson's included archaeology, viticulture, literature and libraries, educational reform, architecture, agricultural improvement, and political philosophy. Jefferson died on July 4, 1826. The inscription on his gravestone at Monticello, written by himself, reads: Here was buried Thomas Jefferson Author of the Declaration of American Independence of the Statute of Virginia for Religious Freedom and Father of the University of Virginia.

James Monroe, the fifth president of the United States and nationally significant figure, made his home at Highland (now Ash Lawn-Highland), located just to the east of Monticello Mountain. Monroe lived in the district for thirty-one years and his house, now preserved as Ash Lawn-Highland, remains the premiere place for interpretation of his lasting influence. Monroe was born in Westmoreland County, Virginia, on April 28, 1758, and was the son of a modest planter. He attended the College of William and Mary but left to join the Revolutionary War. In 1780, Monroe returned to Virginia to study law under Thomas Jefferson, who became a lifelong friend and significant influence on his intellectual development. Monroe served in the Virginia House of Delegates in 1782, soon being elected to the U.S. Senate, where he continued many of the policies of his friend James Madison. In 1789, he moved to Albemarle County to be near his mentor Thomas Jefferson. He initially purchased a farm in Charlottesville that was later the site of the University of Virginia, but moved to the base of Carter's Mountain, where he constructed Highland in 1793. From 1799 to 1802, Monroe served as the Governor of Virginia and Minister to England. He was elected President of the United States in 1817 and served two terms. Significant accomplishments of his administration included the inclusion of Florida in U.S. territory, the definition of the boundaries of the Louisiana Purchase, and the enactment of the Monroe Doctrine. He resided at Highland until debts required him to move to Oak Hill in Northern Virginia. After his wife's death in 1830, he moved to New York City. He died the following year and is now interred at Hollywood Cemetery in Richmond.

Peter Jefferson (February 29, 1708 - August 17, 1757), father of President Thomas Jefferson, was born in Chesterfield County, Virginia. In 1734, Jefferson became one of the earliest land patent holders in Albemarle County. He eventually resided at Shadwell Plantation, which later included a small town that prospered in response to his milling industry. In 1749, Peter Jefferson, along with Joshua Fry, Thomas Walker, Edmund Pendleton and others, established the Loyal Land Company, and were granted 800,000 acres in present-day Virginia, West Virginia and Kentucky. Jefferson was a land surveyor who, with Joshua Fry, surveyed Virginia and North Carolina, a project begun by William Byrd II some time earlier. Their efforts resulted in the publishing of the Fry-Jefferson map. He died at Shadwell.

Joshua Fry was born and educated in England. He came to Virginia where he served as a professor at William and Mary College until relocating to Albemarle County. He lived at Viewmont on land he patented in 1750. Fry served as one of the County's first magistrates and land surveyors. Fry served, and died, as Colonel of the Virginia Regiment in the French and Indian War, with George Washington serving as his Lieutenant Colonel. With Peter Jefferson, Fry was responsible for the survey and publication of the Fry-Jefferson map.

Thomas Mann Randolph (1768-1828), a significant figure in Virginia politics, was born at Tuckahoe Plantation in Goochland. He served not only as Governor of Virginia, but also as a member of the Virginia House of

**United States Department of the Interior
National Park Service**

Section 8 Page 405

Delegates and as a member of the United States Congress. Randolph, who in 1790 married Thomas Jefferson's daughter Martha Jefferson, lived at Edgehill (Southwest Mountains Rural Historic District) until 1825 when he moved to North Milton (Clifton), where he attempted to establish a shipping town to rival Milton. A close friend of Jefferson's, Randolph also experimented with agriculture and agricultural implements, designing a contoured plow. He died at Monticello and is buried in the Jefferson family cemetery.

Andrew Stevenson (January 21, 1784–January 25, 1857) was a member of the United States House of Representatives, representing Richmond/Henrico. Born in Culpeper County, Stevenson lived in Albemarle County at Blenheim, a house built by Edward Carter. He was educated at the College of William and Mary and he married Sallie Coles of Enniscorthy. Stevenson served as a Congressman from Virginia from 1821 to 1834 and was the Speaker of the House of Representatives between 1827 and 1833. While Minister to England from 1836 to 1841, Stevenson and his wife introduced the Albemarle Pippin apple to England, where it became a sensation which resulted in an economic boom for Albemarle County. From 1856 to 1857 he served as rector of the University of Virginia. His son John White Stevenson was a senator and Governor of Kentucky. Stevenson is buried at Enniscorthy.

Thomas Staples Martin was a U.S. Senator, born on July 29, 1847. Martin lived at Fairview, just outside of Scottsville. A graduate of the Virginia Military Institute and the University of Virginia, Martin established himself as a lawyer. He was elected to the United States Senate in 1893 and served until his death in 1919. He is buried in the University of Virginia Cemetery.

The **Carter family** is one of the more significant families that helped shape the Southern Albemarle Rural Historic District. **John Carter**, son of Robert "King" Carter of Corotoman, patented almost 10,000 acres in the heart of the Southern Albemarle Rural Historic District, just above Carter's Bridge. Educated in England, John Carter was appointed Secretary of the Colony in 1721. Residing at Shirley Plantation, Carter never lived in Albemarle County, but maintained two important early establishments, including a mill near Carter's Bridge and a house called Clear Mount. Carter died in 1743, but his son **Edward Carter** inherited his estates in Albemarle County, probably building the original dwelling at Blenheim. His son **Robert Carter** constructed Redlands after his marriage to Mary Eliza Coles in 1798, one of Piedmont Virginia's "most notable Federal mansions."⁵⁸ Redlands, with 1200 acres, remains in the Carter family today.

Wilson Cary Nicholas (1761–1820) was a Virginia politician who served in the U.S. Senate from 1799 to 1804 and was the Governor of Virginia from 1814 to 1816. Born in Williamsburg, Nicholas attended the College of William and Mary. He served as a member of the Virginia House of Delegates from 1784 to 1789 and as a delegate to the State Constitutional Convention in 1788. Nicholas was again elected as a State delegate from 1794 to 1800. Nicholas then served in the United States Senate where he served until he resigned in 1809. From 1814 to 1817, Nicholas was Governor of Virginia. In Albemarle County, he helped establish the shipping port of Warren on his family's lands along the James River. In doing so, he was an instrumental figure in the establishment of some of the district's early roads, culminating with the Rockfish Gap Turnpike. He died at Tufton in 1820 and is buried at Monticello.

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 406

The **Coles** family is another significant multi-generational influence in the district's evolution. Centered at the 3,000-acre Enniscorthy plantation on Green Mountain, part of 6,500-acre tract originally patented to Francis Eppes in 1730, the Coles family arrived in Albemarle between 1730 and 1747. John Coles, the immigrant, purchased the land as a hunting retreat, later establishing a permanent residence. Coles gave the estate to his son John Coles after his death in 1747. Eventually comprising almost 5,000 acres, the Coles family holdings included a good number of the district's important architectural masterpieces; each given to a Coles son upon maturity. These included Woodville to Walter Coles in 1796, Estouteville to John Coles in 1798 (the original house was known as Calycanthus Hill until the new mansion was erected in 1827), Upper Quarter was inherited by Tucker Coles in 1798 (which became Tallwood in 1804), and the Enniscorthy plantation was deeded to Isaac Coles (the original house burned in 1839 and was rebuilt in 1850). Other Coles family houses in the Green Mountain area include Coleswood (1903), Hampstead (circa 1850, demolished), Oakland (demolished by fire), and Meadow Farm. Coles' also resided, often through marriage, at Viewmont, Isaetta/Oakmont, Blenheim, Redlands, Sherwood, and Roundtop. The Coles family continues to own property in the district and the family cemetery at Enniscorthy remains in family use.

Edward Coles of Enniscorthy was perhaps the most politically successful of the Cole's scions. Educated at Hampden-Sydney College and the College of William and Mary, he returned to Albemarle and inherited his father's Enniscorthy plantation with twenty slaves at age twenty-three. Long espousing the evils of slavery, Coles planned to free his slaves and retain them as farm laborers. An unpopular man in the local community, Coles realized that he would have to take his laborers West.⁵⁹ Appointed Secretary to President James Madison, Coles' plan was put on hold but he used his position to lobby for emancipation with Madison and Jefferson. In 1819, he returned to his plan and moved to Illinois with his slaves, where he set them up as free farmers. He was appointed Registrar of the Land Office by President Monroe. Coles was elected Governor of Illinois in 1822, running on an anti-slavery platform. Although unsuccessful, Coles ran for U.S. Congress in 1831. He moved to Philadelphia in 1832 where he married Sarah Roberts. He died in 1868.

While not the most significant place to interpret the lives of two other U.S. Presidents, **Theodore Roosevelt** and **Franklin Delano Roosevelt**, it is of importance to note their association with the district. Theodore "Teddy" Roosevelt and Edith Roosevelt purchased Pine Knot in 1905; a fifteen-acre tract associated with Plain Dealing. As a renowned naturalist, the secluded Pine Knot served as a rural retreat for the President during his term in Washington. Visiting the property in 1905, 1906, 1907 and 1908, Roosevelt documented numerous wildlife species, enjoyed hunting, hiking, and horseback riding. Although additional acreage was purchased in 1911, Roosevelt failed to be reelected to office in 1912 and the family did not return, although it was owned by the family until 1941. The property was a precursor to Camp Rapidan and the modern Camp David. The property is now owned by The Edith and Theodore Roosevelt Pine Knot Foundation and is under conservation easement.

Like Theodore Roosevelt Franklin Delano Roosevelt frequented the district during his presidency. A frequent guest of General Watson, his secretary, aide, and companion, Roosevelt's visits to Kenwood earned it the nickname of "Little White House." Additionally, Kenwood was designed by the New York architect William Adams Delano, a cousin of Roosevelt's, who also designed Colle.

Charlotte Digges "Lottie" Moon (1840 –1912) was a Baptist missionary to China from 1873 to 1912. Her work as a teacher and evangelist was instrumental in the operations of Southern Baptist missions. Moon was born to affluent parents, Edward Harris Moon and Anna Maria Barclay, who were devout Baptists. She was born and lived at Viewmont plantation in Southern Albemarle. Educated at the Virginia Female Seminary and the Albemarle Female Institute in Charlottesville, Moon, in 1861, received one of the first master of arts degrees awarded to a woman in the South. Foreign languages were a specialty of Moon's and she was well versed in Latin, Greek, French, Italian, Hebrew, Spanish, and, later, Chinese.

After the Civil War, Moon felt a call to foreign mission work in the Far East. Instead, Moon became a teacher. She and her sister founded the Cartersville Female High School in Georgia in 1871. She began to work with the poor through the local Baptist Church. In 1872, her sister accepted a mission position in China and Moon followed the next year.

Originally a teacher in a girl's school, Moon later became a successful evangelist. She campaigned for equal treatment of women missionaries, especially through her influential writings. She encouraged Southern Baptist women to organize local missions and support for missionaries. Highly successful, Moon converted many Chinese and Americans and was revered by Chinese women for her acculturation. She also successfully lobbied for mission furloughs after witnessing high rates of missionary burnout. By 1904, famine and disease had greatly affected her ability to do her job. As money was scarce, she began to feed people with her own provisions, which eventually took a heavy toll on her physical and mental health. In 1912, as her health greatly declined, she was sent back to America; where she died en route.

Her legacy is remembered by Southern Baptists with the annual Lottie Moon Christmas Offering for Foreign Missions, which was started in 1918. The fund has since averaged more than twenty million dollars a year.

CRITERION C: ARCHITECTURE

Areas of Significance:

ARCHITECTURE

Jeffersonian Architecture

The architectural evolution of the historic district is one of its most significant features. The ability to trace the historical development of the district from 1720 to the present through its architecture is clearly visible, from early vernacular houses to large stylistic mansions, to agricultural outbuildings, to field patterns and landscape design, to road construction, to slave and worker housing, to commercial stores, to industrial and engineering feats, to modern-day dwellings and barns. One of the most significant influences noted in the architecture of the district is Jeffersonian Classicism, employed throughout the district by Thomas Jefferson himself as well as his talented craftsmen and builders. It is noted that "One can argue that no other American architect has surpassed Jefferson in his influence on the built environment"⁶⁰ In this regard the Southern Albemarle Rural Historic District is one of the most important places to reveal this celebrated architectural influence. Jefferson's architectural masterpiece of Monticello is located within the district, as well as numerous Jeffersonian designed or influenced dwellings including Edgemont, Esmont, the William Walker House, Estouteville, and Christ

Church Glendower, among others. Tallwood and Mountain Grove also feature the Palladian three-part plan. Significantly, the 1940s dwelling at Fairview is a revival of the Palladian concept.

Jeffersonian Architects and Craftsmen Associated with the District

Thomas Jefferson was the architect with the most influence in Albemarle County. His work is especially significant in the Southern Albemarle Rural Historic District. His vast influence on American architecture resulted in the emergence of the Jeffersonian Classicism architectural style that is best represented in Albemarle County, most notable at Monticello and the University of Virginia's Academical Village and Anatomical Theatre. He began his architectural pursuits with the building of Monticello, which first began in 1768. Originally a tripartite structure, the form evolved into the Neoclassical form that remains today. In tandem, these architectural masterpieces are one of six man-made listings from the United States on the World Heritage list. Jefferson designed buildings throughout Virginia, including the State Capitol Building, residences such as Poplar Forest, Bremo, Edgehill (demolished) and Farmington, as well as numerous county courthouses and jails. In Southern Albemarle Jefferson is attributed with the design of Edgemont in 1793.

Jefferson's workmen, of whom he employed over 200, were responsible for furthering the proliferation of Jeffersonian Classicism. Important works were created by many of his workers, including James Dinsmore, John Neilson, William B. Phillips, Dabney Cosby, John Perry, Hugh Chisholm, Malcolm Crawford, James Walker, William Dunkum, and John Dunkum, among numerous others. Those associated most prevalently with the Southern Albemarle Rural Historic District include James Dinsmore, William B. Phillips, John Dunkum, William Dunkum, and James Walker. Works attributed to Jefferson craftsmen are numerous, including Sunnyfields, Christ Church Glendower, the William Walker House, Estouteville, and Esmont, among others.

James Dinsmore (1771-1830), a Northern Irish carpenter, worked for President James Madison at Montpelier and became the master carpenter for Jefferson at Monticello.⁶¹ Although Dinsmore worked on Upper Bremo, Poplar Forest, and Montpelier, he resided in Charlottesville, owning a mill at Pen Park. His local Albemarle County projects include the University of Virginia's Rotunda and Anatomical Theatre, likely the design of Oak Lawn, , as well as the design of Estouteville on Green Mountain in the district. While Dinsmore died prior to the building's construction, his designs were implemented by his brother, John Dinsmore, with the brickwork laid by William B. Phillips. Dinsmore represents a pivotal shift in America from local builder to trained architect.

William B. Phillips (1790-18) of Virginia was a master brick mason for Jefferson at the University of Virginia.⁶² Other local projects by Phillips include Berry Hill and the jail in Orange, The Farm and Christ Church in Charlottesville, the orangeries at Castle Hill and Edgehill in Keswick, the brickwork at Estouteville, as well as the construction of Christ Church, Glendower; both in the district. Additionally, he built Sunnyfields near Simeon for himself. At Christ Church, Glendower, Phillips employed master carpenter James Widderfield, who had worked under Dinsmore and Nielson. Phillips was also responsible for numerous courthouse projects in Virginia, with Malcolm Crawford, including those in Greene, Page, and Caroline Counties.

Two of Jefferson's workers, **John** (1775-1855) and **William** (1777-) **Dunkum**, built houses for themselves in the historic district.⁶³ These included John's dwelling called Woodlawn and William's house Brookhill, both on

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 409

Route 20/Scottsville Road. William Dunkum was also responsible for the construction of the first brick dwelling in Charlottesville located in Vinegar Hill.

Another of Jefferson's workmen associated with the historic district is **James Walker**, who was employed as carpenter and millwright. Walker built the William Walker house in Warren, known for its piano nobile design, for his brother, William Walker, in 1803.⁶⁴

Colonial Revival Architecture and Restorations

Beyond the reaches of Jefferson's idealism in architecture, the district also possesses a number of outstanding examples of high-style late-nineteenth and early-twentieth century Colonial Revival dwellings. Often built by residents immigrating into the district, these dwellings, such as Guthrie Hall and Williams Adam Delano's Kenwood and Colle relate to a larger national movement. Other significant examples in the district include Coleswood, Oakmont, Maple Hill, Lanark, Fairview, and Lion's Watch, with the latter three designed by locally prominent architects. More importantly to the architectural integrity of the district, the Colonial Revival movement also inspired the wide-scale restoration of many of the district's Colonial and early Federal architectural masterpieces, often with their accompanying gardens. Significantly, the district's proximity to the University of Virginia is important as the school of architecture was directed by Fiske Kimball, a nationally significant Colonial Revival period restoration architect. Many of the program's graduates designed buildings or participated in the restoration of earlier dwellings within the district. Important restoration projects include Monticello, Plain Dealing, Glendower, Edgemont, Woodville, and Bellair, among others.

Important Colonial Revival Architects and Landscape Architects

David Wylie Anderson was born in Albemarle County in 1864.⁶⁵ Son of a Carpenter, Anderson established himself with architecture practice in Richmond. Local commissions included Nydrie in 1898 and Ednam (in western Albemarle County) in 1901.

William Adams Delano (1874 –1960) was a prominent Colonial Revival architect.⁶⁶ He worked with Chester Holmes Aldrich in the firm of Delano and Aldrich that worked primarily designing for elite clients in New York City. Commissions included townhouses, country houses, banks, and private clubs, most often constructed of brick and limestone.

William Delano was born in New York City, a member of the prominent Delano family of Massachusetts and was a cousin to President Franklin Delano Roosevelt. Delano was educated at Yale and Columbia's School of Architecture and later worked for the New York firm of Carrère and Hastings, where he met partner Chester Aldrich. In 1903, Delano and Aldrich formed their own firm. Commissions included designs for the Rockefellers, Astors, Vanderbilts, and the Whitneys. In 1921, Delano designed the second largest residence in the country, Oheka, on Long Island. Delano was revered for his skill at architectural detail and was responsible for the ornamentation of numerous apartment buildings in New York and the Marine Air Terminal at LaGuardia. Other important works included Kykuit for the Rockefellers, the Knickerbocker Club in NYC, Baltimore's Walters Art Gallery, the National Audubon Society headquarters, the Japanese Embassy in Washington, D.C., as

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 410

well as numerous private residences, schools, and clubs in New York City, among other designs. In the Southern Albemarle Rural Historic District, Delano was responsible for the design of both Kenwood and Colle. In 1953, Delano received the American Institute of Architects Gold Medal award. The Delano and Aldrich Archive is located at Columbia University. Delano worked almost until his death in 1960, at age 85, in New York City.

Annette Hoyt Flanders, a notable Colonial Revival-era landscape architect, was born in Milwaukee, Wisconsin in 1887. She attended Smith College, where she majored in botany and received an M.A. in landscape architecture from the University of Illinois. She also studied at Marquette University and the Sorbonne in France. She was employed with Vitale, Brinckerhoff, and Geiffert in New York City prior to opening her own New York landscape architecture office in 1922. Flanders was a member of the American Society of Landscape Architects (A.S.L.A.) and was awarded the Medal of Honor in Landscape Architecture of the Architectural League of New York. She was considered one of the five most successful women landscape architects of her time.⁶⁷ She moved her office to Milwaukee in 1943. She gave numerous lectures, wrote for national publications, including *House and Garden*, *Country Life in America*, and *House Beautiful*, and appeared on many radio broadcasts.⁶⁸

The most active Colonial Revival architect to work on historic houses in Southern Albemarle during the Colonial Revival period was **Milton LaTour Grigg** (1905-1982). Grigg was born in Alexandria, Virginia and worked with the firm of Perry, Shaw & Hepburn on restorations at Colonial Williamsburg Between 1929 and 1933. In 1933, Grigg went on to establish his office in Charlottesville, VA, where he had matriculated at the University of Virginia's school of architecture. Many of his commissions came from wealthy northerners who had relocated to the area after the depression to take advantage of the lower cost of living and the impressive stock of high-style eighteenth and nineteenth-century dwellings. In addition to projects in the Charlottesville area, Grigg also worked for the Army Corps of Engineers as Chief of the Design Section and undertook local and federal governmental projects, such as the expansion of the United States Embassy in Canberra, Australia as well as city halls for Alexandria, Falls Church and Charlottesville.⁶⁹

Many notable buildings in Southern Albemarle were recipients of Grigg's restoration designs, including Keelona, Plain Dealing and Monticello. However, his best work can be seen at Edgemont, where he successfully added significant features to the building and landscape in 1940. The twentieth-century additions and renovations achieved their compositional balance and seamless quality by referencing features known to have been designed by Jefferson. He also had a minor impact on Redlands.

Similarly, **Floyd Elmer Johnson** was a local architect who worked in the Colonial Revival mode who was involved with many prominent restoration projects.⁷⁰ Born in Charlottesville in 1909, Johnson graduated from the University Of Virginia School of Architecture in 1934. He partnered with Milton Grigg from 1936 to 1940 and was responsible for numerous projects, including the Albemarle County Courthouse restoration, and work at Monticello as a consulting restoration architect after Milton Grigg's tenure. Other restoration work by Johnson included Farmington, Shadwell, and Windsor Hill. He resided in the district at the Dyer's Mill house. He was the recipient of an American Institute of Architects (AIA) award and the Ross Award from the Classical America Society.

Section 8 Page 411

Fredrick Hill was an architect with the renowned firm of McKim, Mead, and White in New York City.⁷¹ The firm, one of the premiere architectural firms of the late nineteenth and early twentieth centuries in America, was pioneering in its use of the Beaux Arts and Colonial Revival styles. Commissions were based in New York and Newport, as well as numerous other locations. Stanford White was responsible for commissions in Albemarle County, including the Rotunda restoration and the University President's House on Carr's Hill at the University of Virginia. Fredrick Hill, an architect with the firm, is known to have constructed the Casino in Nantucket, as well as Guthrie Hall in Southern Albemarle, where he partnered with engineer Fred Kennedy.

Howard Sill (1867-1927) was born in Albany, New York. Sill established himself as an architect in Baltimore, Maryland working at the firm of Wyatt and Nolting. He was responsible for numerous private commissions in Baltimore and was responsible for the design of the Municipal Museum of Art in collaboration with John Russell Pope. Sill was responsible for two renovations within the Southern Albemarle Rural Historic District, including Redlands and Morven.

Benjamin Charles Baker (1884-1955) was also an architect with McKim, Mead and White, although he did not undertake any work in Virginia while he was with the firm. Instead, he retired from architecture in the 1920s and moved to Charlottesville to seek treatment for a nervous condition. Later he would re-enter architectural practice, designing "Pantops" which is also in Albemarle County but outside of the district, in c. 1938. Also in 1938, he partnered with **Henderson Heyward** and Alfred Llorens to form the firm of Baker, Heyward and Llorens, a firm which continues today.⁷² While with the firm he designed Lion's Watch circa 1940. Henderson Heyward also worked in the district, designing Lanark in 1961, which he later referred to as his best work.⁷³

Marshall Swain Wells (1900-1974) of Chattanooga, Tennessee graduated in the University of Virginia's first architecture class where he studied under Fiske Kimball. After a tenure in a New York architecture firm, Wells returned to Charlottesville where he designed and renovated numerous buildings. His renovation work in the district was noted at Bellair, although he also worked throughout Albemarle County.

CRITERION D: ARCHAEOLOGY; HISTORIC- NONABORIGINAL

Areas of Significance:

AGRICULTURE
ETHNIC HERITAGE: BLACK
EXPLORATION/SETTLEMENT
INDUSTRY

The Southern Albemarle Rural Historic District is eligible under Criterion D due to its documented ability, and future potential, to yield important information about the lives of the people associated with the district's historic past, including persons of African, European, and possibly Native American descent. The district is significant for the archaeological sites that have proven to reveal information relating to the region's history. These sites

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 412

include Peter and Thomas Jefferson's lands at Monticello and the adjacent Jefferson farms, James Monroe's plantation at Highland (now Ash Lawn-Highland), and the archaeological investigation of the slave cemetery at Redlands. Specifically, the sites associated with Thomas Jefferson's Monticello plantations have revealed significant information relating the material culture and physical development of Virginia's Piedmont region from circa 1735 through to the Civil War. Artifacts and features relating to the region's social systems, economic evolution, industrial beginnings and agricultural development have been identified. In addition to the documented resources, historic maps, deeds, and other archival resources reveal the location of many mills, dwellings, road traces, outbuildings, cemeteries, commercial structures that have since disappeared from the landscape. While limited archaeological investigation has been undertaken at most prehistoric sites of the Archaic and Woodland periods, archaeological deposits likely survive and may have the potential to reveal additional information regarding the cultural, economic, agricultural and industrial development of the district when further studied. These sites include scattered Native American soapstone quarries and a pre-historic Native-American village settlement at Warren.

Through decades of intensive archaeological research, the plantation farms at Monticello, the home of Thomas Jefferson, have proven to have a superbly intact collection of archaeological resources dating from the region's initial settlement in the 1730s and 1740s until the Civil War. These resources have yielded important information on the material culture and lifeways of the region's elite planter class and the large number of African-Americans they enslaved. The plantation, which at its height was a 5,000-acre tract including the farms of Monticello, Tufton, Lego and Shadwell, was home to the Jefferson family as well as hundreds of slaves and free workmen. These slaves and free workmen "powered Jefferson's agricultural and industrial enterprises" and led to the development of what is today recognized as a World Heritage site.⁷⁴ According to the Thomas Jefferson Foundation, the archaeological investigations at Monticello are divided into two distinct categories: the Plantation Archaeological Survey and the Mulberry Row Reassessment. The Plantation Survey is focused throughout the over 2,000 acres currently owned by the Foundation and is "revealing that dramatic changes in domestic and agricultural landscapes occurred at Monticello from initial European and African settlement circa 1740 to the Civil War."⁷⁵ The second focus of Monticello's studies is Mulberry Row, which was a line of outbuildings that were located near the main house at Monticello. This service row included blacksmith shops, nail and carpenter shops, and other supporting services and dwellings that relate to the lifeways and culture of Monticello's enslaved population. As stated by Monticello's archaeology department, the sites have revealed that the "excavations along Mulberry Row during the 1980s brought to light the buried remains of these buildings and hundreds of thousands of artifacts. They made visible the centrality of slavery to life on the mountain top. The reassessment brings 21st-century analytical methods to bear on deciphering the historical meaning of this material."⁷⁶

To date, over eighteen sites have been extensively evaluated and over 13,000 shovel test pits have been dug. These archaeological investigations have revealed significant information that relates to the early settlement and domestic life in Albemarle County and the larger Virginia Piedmont, including significant agricultural, architectural, and cultural findings. Additionally, these sites provide a picture into the cultural development of the region through the recovery of artifacts and features relating to a broad range of social, agricultural, and industrial uses. The information contained in these more ephemeral resources is significant to the district, and the piedmont region as a whole, because they have been proven to reveal the region's development in much greater detail than

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 8 Page 413

can be found through architectural resources, historical important persons or above ground resources relating to broad historical patterns. Additionally, through the extensive use of shovel test pits, the ability of the plantations at Monticello to reveal additional information important to the history of Virginia's Piedmont region has been substantiated. Finally, in addition to the Colonial, early-Republic and Antebellum resources found at Monticello, two sites have been determined to relate most likely to pre-historic or contact period Native-American culture.

Though not yet fully documented, the district also has the potential to yield additional archaeological information important for Native American prehistory in the areas of industry and settlement, which may be documented fully at a later date. The most substantial exists in relation to the significant soapstone vein that transects the district. The Late Archaic and Early Woodland periods in Virginia, dating from 3,000 B.C. to 300 A.D., were characterized by a mobile population comprised of hunters and gatherers as well as an introduction of agricultural practices. A 1992 historic resources study in neighboring Nelson County, which shares the same soapstone vein with Albemarle County, identified the soapstone quarries of Nelson County as central to understanding the Archaic period in Virginia. The bowls produced from these quarries were traded extensively throughout Virginia and the eastern United States.⁷⁷ According to a 1926 report published in the *Journal of the Washington Academy of Science*, the quarries at Schuyler in Nelson County and at Damon in the Southern Albemarle Rural Historic District are said to have been used by the Monacan and Siouan tribes long before the settlement of Jamestown. Although some modern disturbance of these sites is likely, further investigation could still yield additional information about Albemarle's prehistoric soapstone industry. Located along this extensive vein, the quarries at Alberene and Old Dominion, also in the district, are likely to have similar findings. Albemarle County's soapstone resources are currently being studied by the Virginia Department of Historic Resources. Once this report is complete, more extensive knowledge of Albemarle's soapstone deposits should be discovered, allowing a thorough investigation of the district's archaeological resources and of the level of archaeological integrity which remains.

With further investigation, other Native-American archaeological sites can potentially reveal information about the settlement patterns of the Woodland Period (1,200 B.C. to A.D. 1607). Late Woodland Period (A.D. 1,000 to 1607) settlement is marked by "the development of maize horticulture and a more rigid social organization along with more highly organized village structures."⁷⁸ Albemarle County's Native American settlements during the period have been discovered "to parallel those of the Coastal Plain, with villages located on the broad floodplain of the Rivanna and James rivers."⁷⁹ Three such important sites have been identified in Albemarle County, including the Monasukapanough site along the Rivanna, as well as the Warren site (44AB3) and site 44AB1, both located along the James River in the district. As mentioned above, Monticello also features archaeological findings that appear to be from Native American sites. Oral history also suggests that Native-American burial sites may be found at Morven/Ellerslie (002-0073/5045-0620; formally known as Indian Camp) and Tallwood (002-0054/5045-0166). In addition to these specific locations, the district as a whole likely contains rich archaeological potential, which could yield important information about the area's pre-historic and historic past.

10. GEOGRAPHICAL DATA

Verbal Boundary Description

The Southern Albemarle Rural Historic District is located in southeastern Albemarle County, Virginia. The large rural historic district is located between the James and Rivanna Rivers along the eastern side of the Green Mountains. This area reflects the early settlement and growth of the county from circa 1730 to 1955. Although the boundary follows roads, rivers, and mountains, it is important to note that any historic resources adjacent to the boundary were included along parcels lines. Areas of non-historic development on the boundaries are omitted, particularly on the eastern edge and to the west of the town of Scottsville. The large rural district currently occupies approximately 83,627 acres, and contains 1,591 individual properties on 2771 parcels.

The boundaries roughly extend from Milton along the Rivanna River, including the Shadwell and Clifton properties north of the river, along Milton Road, including Rose Hill community, to Simeon. The boundary then

CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

Section 10 Page 425

extends west along Route 53/Thomas Jefferson Parkway to Route 20/Scottville Road. It extends south to Red Hill Road at the Hardware River; following Secretary's Sand Road southward along the Green Mountains to the intersection at Plank Road/Route 717 at Powell Corner. The boundary then extends west to include the industrial village at Alberene and Edgemont Farm. The boundary then extends south through Alberene, along Alberene Road/Route 719, to Route 717 and west to Route 630/Green Creek Road until the intersection with Route 6/Irish Road where it turns eastward to Route 722, including the hamlets of Old Dominion, Damon, and Bolling Siding. At 722, the boundary follows the spine of the Green Mountains to the Rockfish River/Nelson County line; forming the southwestern corner of the district. The boundary follows the Rockfish River east to Howardsville and the juncture of the James River. The James River forms the southern boundary of the district, extending to the village of Hatton. Due to modern development in the area west of Scottsville, the boundary extends north from Hatton along Route 625 and 626/Langhorne Road to Route 20/Scottville Road. The original courthouse site is included in the boundary. The boundary then follows Scottville Road, abutting the Scottsville Historic District. From Scottsville, the boundary extends north along Hardware Street/Blenheim Road to Jefferson Mill Road/Route 618, where it extends to Woodridge. At the village of Woodridge, the boundary follows Route 620/Rolling Road to Slate Hill/Overton. At the intersection of Route 795/ James Monroe Parkway, the boundary extend north to Simeon.

The exact boundary of the Southern Albemarle Rural Historic District is delineated by the polygon drawn on the accompanying seven USGS quadrangles (Charlottesville East, Simeon, Alberene, Esmont, Schuyler, Howardsville, and Scottsville), whose vertices are marked by the above referenced UTM points.

More specifically, the boundaries follow the property lines and include the following Albemarle County tax parcels:

- 077000000025A0, 077000000025B0, 07700000002700, 07700000003000, 077000000030A0, 07700000003100, 077000000031A0, 077000000031B0, 07700000003200, 077000000032A0, 077000000032B0, 07700000003300, 07700000003400, 07700000003500, 07700000003600, 077000000036A0, 077000000036B0, 07700000003700, 077000000037A0, 07700000003800, 077000000038C0, 077E1010000100, 07800000002200, 07800000002300, 078000000023A1, 078000000024A0, 07800000002500, 078000000025A0, 07800000002600, 078000000027A0, 078000000027B0, 078000000027C0, 078000000027D0, 078000000027E0, 07800000002800, 078000000028A0, 078000000028B0, 07800000002900, 078000000031A0, 078000000032A0, 078C0000000100, 078C00000001B0, 078C00000001B1, 078C00000001B2, 078C00000001C0, 078C00000001D0, 078C0000000300, 078C0000000400, 078C0000000500, 078C0000000600, 078C0000000700, 078C0000000800, 079000000007A0, 079000000023B0, 079000000023F0, 07900000003600, 079000000036C0, 07900000004100, 07900000004200, 07900000004300, 079000000043A0, 079000000043F1, 090000000014B2, 090000000014B3, 090000000014B4, 090000000014B5, 090000000014B9, 090000000016B0, 09000000001700, 090000000017A0, 090000000017A1, 090000000017A2, 090000000017B0, 090000000017C0, 090000000017E0, 09000000001800, 090000000018A0, 09000000001900, 09000000002000, 09000000002100, 090000000021A0, 090000000021B0, 090000000021C0, 090000000021D0, 090000000021E0, 090000000021F0, 090000000021G0, 090000000021H0, 090000000021H1, 09000000002300, 09000000002400, 09000000002500, 09000000002600, 09000000002700, 090000000027A0, 090B0000A03600, 091000000002A0, 091000000002C1, 09100000000300, 09100000000400, 09100000000500, 09100000000600, 09100000000700,

Section 10 Page 438

Boundary Justification

The boundaries for the Southern Albemarle Rural Historic District in Albemarle County, Virginia include 83,627 acres with 1,591 properties on 2,771 individual parcels. The boundaries have been drawn to reflect the settlement patterns and historic evolution of the region; revealing the distinctive agricultural landscapes, historic resources, and scenic vistas associated with southern Albemarle County. Characterized by a rolling Piedmont landscape, the district was historically defined by both geographical obstacles and an extensive network of early transportation routes. Geographical boundaries include the Rivanna River to the north, the James River to the south, and the Rockfish River to the southwest, and the Green Mountain chain to the west. Additionally, the county line helps define the eastern boundary. As detailed above, the boundary follows these rough boundaries, including any historic properties along the edges. Any large pockets of non-historic development along the edges have been omitted.

The result is a cohesive rural district that reflects southern Albemarle County's historical evolution since the 1730s. The boundary includes the pastoral landscape, historic resources, fields, pastures, rivers, transportation routes, forests, and orchards that have been historically included within this intact geographical area. The boundaries for the district reflect the area's intact historic integrity.

7. INVENTORY JUSTIFICATION

In the following inventory all resources, both primary and secondary, have been considered either contributing or non-contributing based upon the areas of significance as listed under Criteria A, B, C, and D as:

AGRICULTURE, ARCHITECTURE, ARCHAEOLOGY: HISTORIC, COMMERCE, COMMUNITY
PLANNING AND DEVELOPMENT, CONSERVATION, EDUCATION, ENGINEERING,
ENTERTAINMENT/RECREATION, ETHNIC HERITAGE: BLACK, EXPLORATION/SETTLEMENT,
INDUSTRY, POLITICS/GOVERNMENT, SOCIAL HISTORY, TRANSPORTATION;

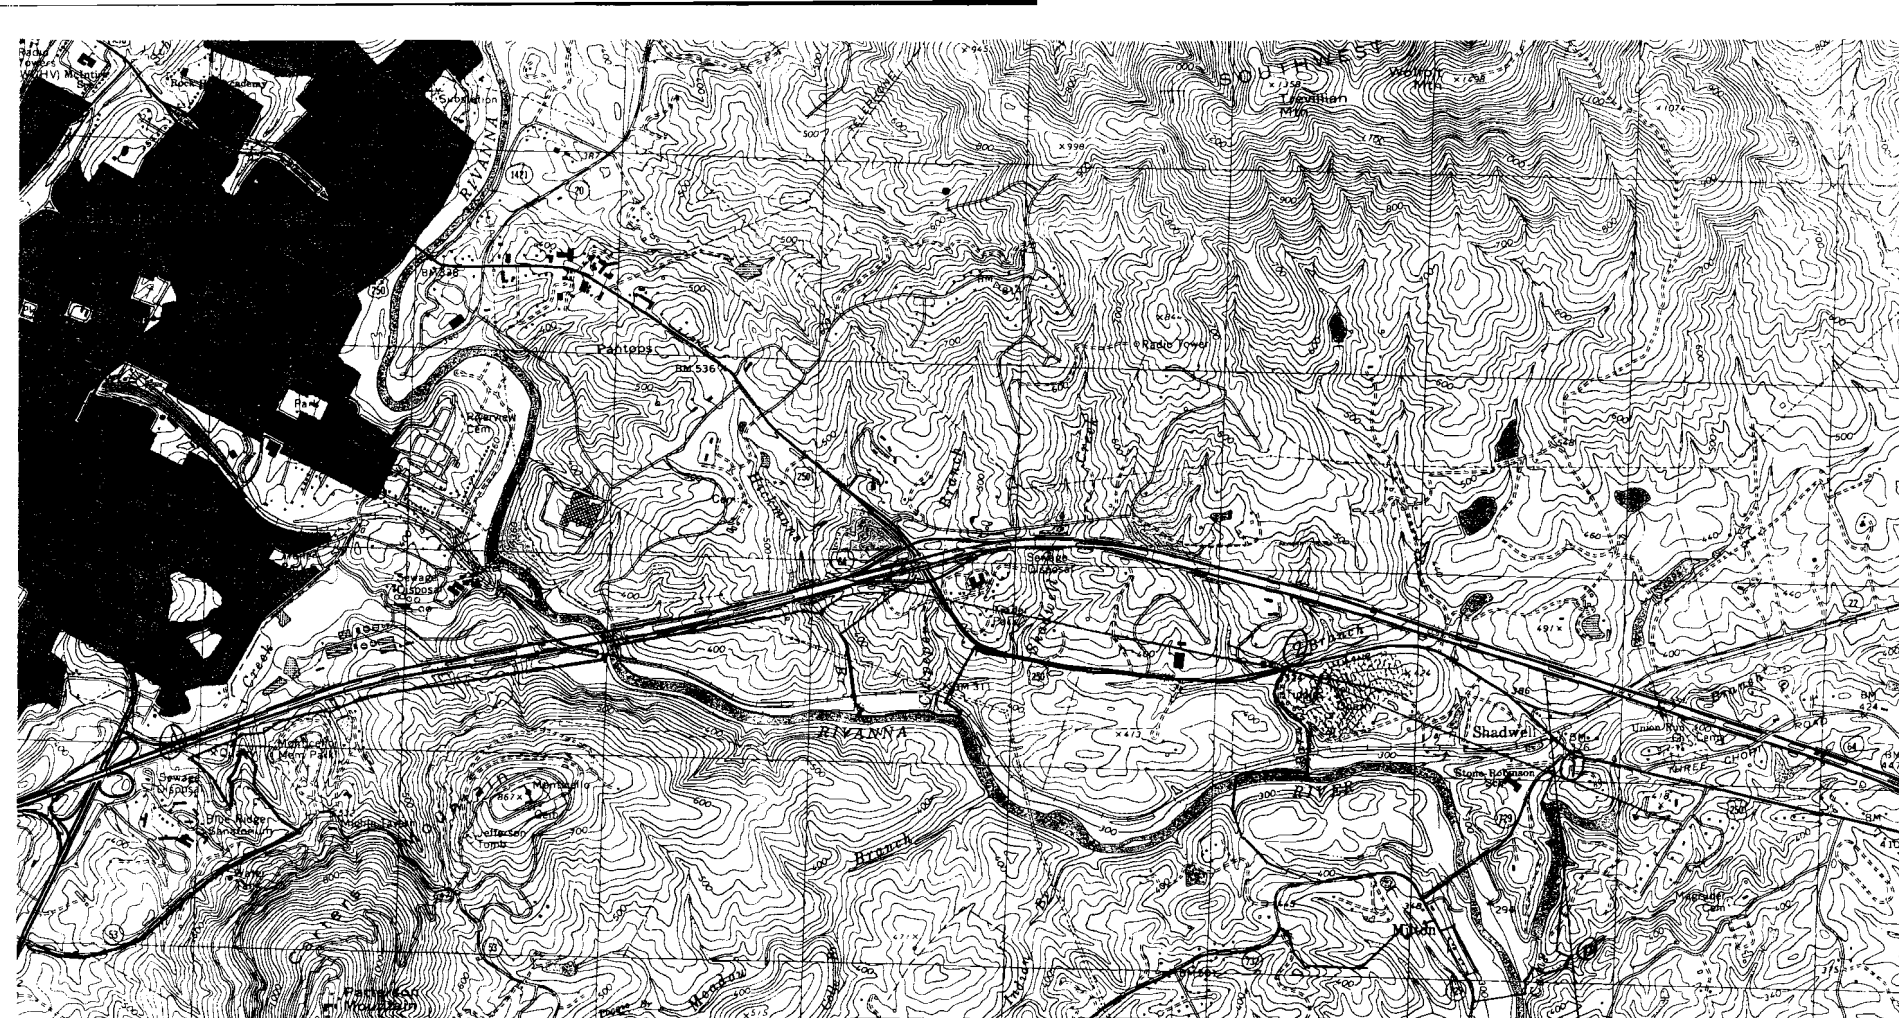

and based upon the period of significance as 1729 through circa 1955.

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Southern Albemarle Rural Historic District
Albemarle County, VA**

All non-contributing resources have therefore been so noted for being either constructed after 1955 or as having no integrity left to represent the period and areas of significance.
