NOTES

1. *24-2

The asterisk found in front of this parcel number indicates that this parcel has one or more noncontiguous areas that represent one whole parcel. In most, if not all, cases ownership hooks are employed to signify the extent of a certain parcel boundary.

45-18A

When two or more parcels are associated with the same parcel, the topmost parcel number in a leasehold or mineral rights scenario should (but not always) signify the main parcel.

51-27A1

Some parcels are taxed by the State Corporation Commission (SCC) and not by the County. These parcels will have the text "SCC" located below or after the parcel number.

2. With some exceptions the parcel numbers found on the mapbook pages are shown in full shorthand notation.

Full shorthand notation removes the extraneous zeros yielding something that looks like this: 05500-00-00-08300. The "05500" represents the tax map number, the first "00" represents the section, the second "00" represents the block, and the "08300" represents the parcel number. This particular parcel number is tax map 55, parcel 83.

Full shorthand notation removes the extraneous zeros yielding something that looks like this: 55-83. Notice how the section and block numbers were completely removed. In a scenario where a parcel has a section and/or a block number the notation would look something like this: 56A1-11-10. The “1” represents the section number and the double dashes, or "--" indicates that the block number is "00". Looking at another example, 62A2--G-24, the "--" in this case means the section number is "00" and "G" is the block number.

3. In many cases the main number of the parcel number will not be displayed on a given mapbook page. In these situations, the main number can be inferred by determining which mapbook page contains that parcel. For example, if you found 13C on Tax Map 104, the full shorthand number would be 104-13C.

4. When the subdivision names are listed in the marginalia below the inset map number, there is no delineation on the map itself of where a particular subdivision is located.

5. The location of state route numbers do not necessarily reflect where state maintenance of a road ends.
